From K6ME Terry:

Well 1500 watts CW on the CB Band sounds like fun But they would just move
on up too 10 meters like some already have.
Anyway CBers are not the root of this CW thing.
Since I'am an extra you know where I stand on the matter right !

There is nowhere in the US amateur spectrum where CW is not permitted. You can operate CW EVERYWHERE....

Jerry, do you think the ARRL/QST would put the qrp muf on their monthly
charts? 73, Brian/N0iMD

Well maybee code should only be allowed with 1500 watt or higher powered
transmitters on the 11 meter band!

13. Dx eqip help....

Newsgroup: rec.radio.amateur.dx
Date: 1998-01-03 00:00:00 UTC
From: xandes@webtv.net
Message-ID: <68kmrpkel1@newsd-144.iap.bryant.webtv.net>
Source record: 30674

I have heard that the 6meter and the 10 meter bands are going to be opening up in proportions greater than 1959...I am wondering if someone can give me advice as to wether I should get a 6m or a 10m rig as my first purchase for the upcomming year (I intend to pick up both...just wondering if there is any one with an argument of one over the other.)

Thanx,
Alex

If it were me, I'd opt for the 10 meter equipment. When both bands are
up, 10 is by far the best for dx. Depending on your financial situation,
you may want to look for a used Kenwood TS680. That has both full
coverage 10-160 as well as 10 watts 6 meter (all mode). If $$$$ are no
problem, look at the Icom 706 as it has 100 watts 6 meters as well.

Good luck, have fun

Yep, I'd say the same.
BTW to convert from pounds (GBP) into dollars (USD) multiply the GBP
price by about 1.62 at the current rate to get dollars cost.
So you are looking at around $267, plus import taxes and carriage.
Import duty here in the UK is around 5% of the value of the item(s)
plus we get to pay 17.5% of the value to the taxman. Ripper!

```
Ham Radios For Sale!
HF Equipment
I have a Kenwood TS-430S in like new condition. With mic and
internal filters! This rig also has the FM board in it for working
those great 10 Meter repeaters! It has a general coverage
receiver for listening to Military and Maritime traffic. It has been
professionally modified for MARS/CAP and WARC bands.

HF Equipment
I also have an automatic antenna tuner. It is a Kenwood AT-250
and is a matching set for the TS-430 listed above. This will tune
almost any antenna to work where ever you want it to. Also in
like new condition!

VHF All Mode!
I have an Icom IC-290H 25watt all-mode 2 meter rig. This is an
older rig but works great! This is one of the radios that was built
to last. It has FM, USB, LSB, and CW.

If you are interested please send me some E-Mail at the address below
and we can discuss pricing. Or check out my web site ad - the URL is
also listed below!

Still means somwthing, Gary.. One point on phone in FD, Two on CW. You get
one more point for sending the (T), not to mention that you get no points if
you bother to copy a real 579 that some station ACTUALLY sends you as
599 in your "log" that is turned in.. :)

I just couldn't resist doing this... :)

Sure frogs don't remember when they had the tails!
CW was there first and CW is allowed anywhere on Ham bands not the other way around. I can live with no-coders in peace as a die hard CW op. but why from time to time this kind of stupid provocative comment appears here and there?
I never bother with anyone who does not like code. Just leave me alone and let me enjoy one aspect of our hobby of many.
If you have nothing else to do other than making this kind of comment, go try to learn code(for a change which will never happen, hi) or do/ learn something useful for your life/career. If still nothing else, go to sleep or eat something and keep the mouth shut.
Tony, VE6CGX

Thanks to the Northern Ohio Amateur Radio Society, Northern Ohio DX Association, Ohio/Penn PacketCluster Network, KA1GJ, WB2RAJ/WB2YQH & The 59(9) DXReport, W3UR & The Daily DX, NT5C, K8XP, N0TG, 9M2TO, F6AJA, G3XTT, G4BUE & DX News Sheet, HB9CYN, JA0DAI, JE7RJZ, LU1DZ, OH6KXL, ON1DDT, PA0ALB, RA3AUU, SM0DJZ and YO3FWC for the following DX information.

9M2, PENANG ISLAND (6 meters from W. Malaysia). There are currently two 6 meters stations active there. Tex, 9M2TO, is currently running 150w into a 4 element yagi and Phoa, 9M2KT, is running 100w into a GP antenna. There were no times or frequencies provided, but watch for openings. QSL 9M2TO via JA0DMV JARL Bureau. QSL 9M2KT via 9M2 Bureau.

9M8, EAST MALAYSIA. Peter, PA0ALB, reports there will be activity from Serian, Borneo Island (IOTA OC-088), April 10th to May 22nd. The callsign to be used is 9M8CC. His equipment will be a TS-440, PS-52, AT-230 Antenne tuner, 2 elements triband Fritzel for 10/15/20 meters and a GP for 80 meters. Check 1200z on 20 meters. QSL via PA0ALB.

9M0C, SPRATLY ISLAND DXPEDITION UPDATE. Don, G3XTT (DXpedition Publicity Officer), reports in a press release that arrangements for their forthcoming 9M0C expedition to the Spratly Islands are going well. OPDX InterNet Subscribers will receive the complete press release as an additional bulletin. Meanwhile, nine cases have been shipped by sea on November 30th, from Southampton for Kota Kinabalu in Sabah Malaysia. They will arrive in Kota Kinabalu in early January. All the Yaesu equipment has now been shipped from Japan. This will also arrive in Kota Kinabalu in early January where it will be combined with the shipment from the UK. The combined shipment will then be sent to Pulau Layang Layang before the DXpedition team's arrival. The main team that now includes all the UK contingent plans to arrive on Pulau Layang Layang on Tuesday, February 10th. This is two days earlier that originally planned, but this gives them three full days to set up the very extensive antenna farm and the five stations. The second group arrives on Friday, February

13th. They will then be fully operational for at least nine full days including two complete week-ends. For more details and updates, please take time to check their Web pages at: http://members.aol.com/spratly98

ATTENTION CONTESTERS! Ciprian, YO3FWC, reports that the 1997 YO DX Contest Official Results can be seen in on the WEB page: http://members.tripod.com/~ciprian/yodx.htm

CT98, PORTUGAL. Look for Portuguese amateurs to use special prefixes from January 1st to September 30th during their "Expo 98". Stations who usually sign CT1, CT2 and CT5 may be using the CT98 prefix. CT4 stations may be using the CS98 prefix, CT3 stations may be using the CQ98 prefix and CU stations may be using the CU98 prefix. QSL via their regular CT/CU callsigns.

D6, COMOROS. Martin, HB9CYN, and Chris, HB9CYV, will be active as D68YN and D68YV, respectively, from January 25th to February 6th. Activity will be on all bands 80-10 meters (maybe 160m) with operations mainly on CW but with some SSB, and maybe RTTY. After the DXpedition, stations worked can find their contacts on the following Web-Page:
http://ab5eh-lin.tamucc.edu/~hb9cyn
Also QSL-requests may be sent to the addresses mentioned on the WWW-site above.

FT5W/FT5X/FT5Z, CROZET, KERGUELEN, AMSTERDAM ISLANDS. OPDX has received a report stating to expect FR5HR on Crozet for 5 days, then Kerguelen for 5 days and then Amsterdam for 10 days starting January 1st and ending January 22nd. Jean Paul, F5BU, leaves Strasbourg on January 14th to Reunion Island, and he will arrive at Crozet Island on January 21st. He will be active as FT5WG until March 18th, with operations mostly on SSB. QSL via F6APU. Also, keep an eye open for Helios, F6IHY, signing FT5XN on Kerguelen. He will be active until June. He is usually active on 20 meters but plans to be active on other bands in the future.

HS, THAILAND. It has been reported that Kareem, HS1RU, runs the HS/9M net on 7060 kHz daily, starting about 1305Z. He is often very readable in the states and has agreed to listen for a "short while" above 7150 kHz for USA when the conditions are good before starting the net. Monitor 7060 kHz around 1305-1310z, and Kareem will specify a listening frequency. It is suggested, as a courtesy to Kareem to please NOT persist in a contact after 1315z. Let Kareem and the others get on with their net. They will be back the next day. It was also mentioned that Kareem will listen for CW on 7060 khz 1305-1310z, and for the eastern USA he works the low end of 40 meters CW quite often around 2200-2400z. QSL via JG3AVS, P.O.Box 86, Amagasaki 660, Japan.

IOTA NEWS.....
Jean Marc, F5SGI, will be active as F5SGI/P from Re Island (EU-032, located in the Poitou-Charente Region Group), from February 15-21st. His activity will be on 40-10 meters, mostly on CW, but on SSB, look for him on 14260 kHz.

Look for OH8TA to be active from Hailuoto (EU-126), February 6-8th. Activity will be on the normal IOTA frequencies. Operations included VHF/UHF and RTTY activities. QSLs prefer via bureau.

KH2, GUAM. "The 59(9) DXReport" states that Walt, KF2XN, will be active until March 15th as KH2/KF2XN from KH2D's QTH while doing disaster relief work.

LU1ZC, DECEPTION ISLAND (South Shetland Group) UPDATE. Alberto, LU1DZ, GACW Coordinator, reports the two operators on the island have installed the following antennas: 10/15/20 meters 4 element tribander 30 meters high (fixed to Europe); 30/17/12 meters separated delta loops; 45 meters long wire for all bands; 160 meters half wave dipole, and they will be putting up a 2 element 40 meters monobander in future. They are currently active on 6 meters on 50110 kHz USB, and very soon they will be ready to operate on the satelite. Also, start looking for them on the SSB IOTA frequencies.

ON50, BELGIUM. During 1998, the Union of the Belgium Radio Amateur (UBA) will celebrate their 50th year anniversary. Look for UBA club stations throughout the year to use the prefix ON50 followed by a 3 letters suffix. A special award is available by working stations and collecting points. Checkout the UBA WEB site for more details at:
http://www.uba.be/algemeen/awarden.htm
Meanwhile, the Zelzaatse Radio Association (ZLZ) reports that they will be active from January 1st to December 31st using the callsign ON50ZLZ. They will be active on HF, VHF and during the UBA Contest. They also mentioned that a QSO with ON50ZLZ is good for 6 points for their ZLZ Award. QSL via ON7ZT or by P.O. Box 53 B-9060 Zelzate Belgium.

QSL INFO AND NEWS......
Harry, RA3AUU, would like to inform everyone that the QSL bureau of Soyuz Radiolybitelej Rossii (the Union of Radioamateurs of Russia) is an IARU affiliated society and the ONLY OFFICIAL address for the QSL bureau in Russia is: P.O. Box 59, Moscow 105122 Russia. He also reported to OPDX that Vasily, RW6HS, who was mentioned in last week's bulletin (OPDX.337) as the UA6 Bureau Manager, is no longer the manager for the UA6-bureau.

ZK1XXP North Cook QSLs. Tom, K8XP, states that the Dateline DX Association wants to advise those waiting for QSLs from its September operation from North Cook (ZK1XXP) that the cards have not yet arrived from the printer. The cards are being provided by FUNKAMATEUR in Germany, and we hope they will be forthcoming in the near future. They ask you to be patient. The many cards already received are safely stored and waiting attention!

Alain, F6BFH, states QSL for XV8FP will be ready early January, and he hopes to send the cards out before the end of January.

QSL MANAGER CHANGE! It was announced that the QSLs for the present operations from Nepal by the Japan UNICEF Ham Club, including Naoki, 9N1JZ (JE7RJZ) will now be handle by JH8XIX.

SPECIAL EVENT STATION 8N0WOG will be opened for Foreign Amateurs in NAGANO Japan!! Every Amateur Radio Operator who comes over to Nagano can operate the special event station, 8N0WOG, during the NAGANO 1998 Olympic Winter Games. All you need is your station license or the official certificate in the English language issued by one's MPT. Japan currently has reciprocal licensing agreement with only 8 countries now (i.e. USA, Germany, Canada, Australia, France, Korea, Finland, Ireland). This limitation will be taken away by Japanese MPT during the Olympic Winter Games. What a great chance to operate! Nagano city is located about 200km northwest of Tokyo, and it can easily be reached by Super express train from Tokyo Station. The location of the 8N0WOG station is located at the Warm-Hearty Welfare Center, just east side of Nagano City Office. The station will be opened 16 days from February 7th to February 22th. The station will be active on all HF bands from 160-10m including WARC bands, CW/SSB, 500 Watts max., and 144/435MHz FM/SSB. For more information and inquiry:
Fax to JARL Nagano Office: +81-26-233-2356
E-mail to JA0TBJ, Kimi Koyanagi: ja0tbj@mx2.nisiq.net
Check out the JARL Web site: http://www.jarl.or.jp

TR, GABON. Roland, F8EN, will once again sign TR8CR from February 5th for 5 weeks (at least). He will be active mostly on CW. QSL via F6AJA.

VP5, TURKS AND CAICOS ISLANDS. Look for N0TG/VP5, WA4DAN/VP5, AA4VK/VP5 to be operational January 16-23rd. Activity will be on all bands 160-6 meters. QSL all to: N0TG, William Rowe Jr., 1094 Big Rock Loop, Los Alamos, NM 87544.

VR6, PITCAIRN ISLAND. The "DX News Sheet" reports that VR6MG is active on 20 and 40 meters CW. No specific times or frequencies were given. OPDX did some research and found that VR6MG was reported on 14210 kHz at 0116z and 7001 kHz at 1325z.

XW30/XW30A, LAOS DXPEDITION UPDATE. The suggested frequencies for the upcomung XW30A (SSB/RTTY/FM) and XW30 (CW) DXpedition, which will take place January 5-14th, have been announced. Look for them on the usual 20/15/10 meter DX frequencies (025 and .95). Suggested frequencies for 80 and 40 will be around 7007 and 3507 kHz for CW; 3797 and 7047 kHz for SSB (depending on QRM). RTTY activity will be around 14083 kHz listening up 3-5 kHz, and occasionaly they will try 21083 kHz. On 160 meters, they will try to concentrate on 1823 kHz (and for JA - QSX 1910). On the WARC bands: CW - 18075 and 24895; SSB - 18145 and 24945; and on 30 meters they will be around 10103-10108 kHz, but as the QRM level rises (at least in Europe during the dark hours), they will try to find clear spots up around 10115 kHz. As a genral rule, they will always try to work split listening up or even down with announced listening frequency. All QSLs will be handled by SM0AGD, Erik Sjolund, Vestag.27, SE-19556 Marsta, Sweden.

Now that the VO500JC operation has terminated, the QSL cards have been prepared and are currently at the VO Outgoing Bureau, ready to go to the main VE Outgoing Bureau.

Those who QSLed direct will get it back direct. All others have been sent via the bureau.

Thanks to Dan VO1MX, Laurie VO1XC, Charlie VO1VZ and Rick VO1SA for the help in getting the cards out promptly. Thanks to all the operators, both VOs and visitors, who operated that station throughout the year.

Be on the lookout this coming April for the International Marconi Day event and VO1IMD as well as various operations through the year from VO1AA and VO1BZM, our club stations.

73 and good DX.

30. SLB "V" watchers note!

Newsgroup: rec.radio.amateur.dx
Date: 1998-01-05 00:00:00 UTC
From: mike.luther@ziplog.com
Message-ID: <68puci$mqr@news.myriad.net>
Source record: 30691

Those of you that watch the SLB's off and on might note that it often takes a LONG time to fix things over in Russia..

The "V" is particularly loud in the Central USA right around this time of year for wintertime path reasons, but for the last two weeks or so it is sick! Apparently, a filter capacitor is going out in the power supply, or AC hum is getting into the oscillator, which we know can be used for FSK because every now and then they forget to shut it off FSK just before they bring it up on 7.002....

I've not had a scope to look at it out at my site, but by ear, the hum modulation on the carrier is about 100CPS. It sounds garbled.

Is Russia on 50 Hz power or 60 Hz power?

I've noted that when what appeared to be a frayed paper tape in the tape keyer was garbaging the "K" beacon up on 7.0401, it took a couple of months to replace or repair it!

It will be interesting to see how long it takes them to fix the instability in the "V". It's been in there for over two weeks now...

:)

The "V" has had an exceptionally good signal the last few nights at my
QTH near San Francisco. It normally peaks around 0200Z to 0300Z but last
night it peaked at 0100Z and dropped after that. The best signal is about
S6 on my TS-930 and I'm using a 2 element beam.

The modulation is not uniform across the character. It's worse on the
first dits and usually fine on the dah.

Commenting on your previous location message....

W6TSQ, who was lomgtime 80 and 40m DXer believed the "V" transmitter
was located in UA9 or UL7 (Kazahstan). His observations were based on
years of comparing stations worked to hearing the "V". The beamheading
is certainly correct as it peaks near 345 degrees from here which puts
it on a line right through that area.

The typically peak time of 0230Z at this time of the year probably corresponds
to near sunrise at the transmitter location. Last night's peak of 0100Z
was unusual because it was at our sunset. At the peak last night I copied RW9SG
in a pileup for some station I couldn't hear. UA9S oblast is located right
on the Kazakstan/ Russia border.

Sometimes the "V" can be copied here in summer at our sunrise which probably
corresponds to sunset at the transmitter.

I ahve been using MIRC for a while and found that #HAMRADIO
has hardly any activity any more. Are there any others that
I can join? Most that use to show up are not real DXers, mostly
average hams.

Has Amateur radio interest diminished?

With the various soft ware out, what is every one using thest days?
EXCITE? If so what WEBB site is popular?

Like most hams these days I spend more time on this CPU than on
the radio.

Packet radio chatting on the cluster I feel takes up valuable net work
time. Any suggestions?

Thanks for your help.

You gotta be joking. SSB big gunner's splatter is 1000% worse than key
clicks. You can technically prove it. Are you guys using A0 mode over
there? Or what kind of RX are you using? Ancient 0-V-2?
I always self monitor my signal thru my back up RX.

Source record: 30703

Hi
I have a number of new G0RUR's Easy Doc's programs
uploaded for the start of the new year... All of my programs are
freely distributable on any media as long as no charge is made other
than for the disk..

Please note these files are also available from Simtel
and filenames and sizes may differ... Filenames ending in a P have
been AV Authentificated using PKzip to Protect you against any file
tampering. If the authentification is corrupt do NOT run the program.

I would appreciate any feedback..

New Files include

RURJ98.COM Available Program List for Jan 98
RURFREQ.EXE Frequency List for RTTY, FAX, CW, PACKET
for use with a Pervisell/ HamCom Demodulator
RURFBU7.EXE User Guide for F6FBB BBS v7.0

Cheers Paul G0RUR

Hi,

I am looking for a list of modes and their standard name in the following fashion:

A1A = CW
J3E = SSB

etc.

I need the full range of modes, digital included.

If anyone has this list or knows where I could find it on the web, please let me know.

Thanks.

Like a major breach of my guaranteed first amendment rights.

Think about it, the government is trying to regulate what you should and shouldn't listen to. Granted, its not a new thing, but laws about it seem almost as rediculous as prohibition...

The same freedom the US fought for for other countries is now in jeopardy IN THE US ITSELF!

and why? cuz some senator got snitched on when someone heard him talking about his scandalous affairs on a cellphone....

When (maybe if?) people realize almost anything that is wireless (note that i am not DISCOUNTING things WITH wires here... :) can be received by other than the party intended as the recipient.

If you think about it, weigh all the angles, and dont just spout off for some reason (like if you have a cell phone or something), you can see that making such a law as the one that exists is a waste of paper.

Now, i don't listen to cellphones, frankly, i'm not interested.
Nor do i plan to be. In fact, I also find it sad that it is almost impossible to find a way to communicate using wireless methods without the risk of a third party interception. Hey, i'm just like everyone else and sometimes want my privacy. But there comes a point when you have to be aware of what is out there and how to protect yourself. Ever see pulp fiction? When he is bringing the Overdosing girl to the seller's house, he realizes that the guy is on a cellphone, and immediately hangs up after claiming audibly "prank caller prank caller, who is this? i dont know you!" Now, beit a somewhat semi-believable and far-fetched example, i think we should all think about what means we communicate through, because you never know who is listening...

I can't wait until the day they make it illegal to hear someone who is talking above average volume to another person at another table in a restaurant.

Really? If you look him up in the CallBook CD-ROM listing, here is
what mine finds:

"FR5DD"
"Jean Pierrat"
"8 Ave des Badamiers, Les Filaos"
"F-97434 Saint Gilles les Bains"
"Tromelin Is"

That is not Reunion!

More important, if it is correct, that is a far tougher one to find than
Reunion and is a separate "country" in the list. It does not correspond to
what many of us have always thought to be so, that he should be FR5DD/T or
actually FR5Tsomething to be there, but like some things in life, you
get a bit more than you thought you were getting when you investigate
what you really see!

I hope I'm right - FR5 /T has been sort of hard to work on 40CW and 80CW
for a while over the last 40 years!

I'm patiently waiting to catch him on 80CW where, from time to time, the
cluster and spot lists shows he operates...

Hi radio lovers,

I need a design for a HF receiver (3.5MHz-30MHz but at least 3.5-18M) that is OK for a back yard (which has a pool, garage etc). I have seen a commercial VERTICAL affair but was many meters high (and vertical and expensive ..how does this pickup horizontally polarised signals (I'm new to this, as you can tell).

If you can help please either email me advice or post it here. I am very appreciative.

Not on the GSM setwork. In the nordic countries we also use NMT,
which can easilly be tapped.

Many radios can do this.
Easily.
I cut a green wire on my Yaesu FT-530, and it receives cellphones. I did it mainly for the out-of-band transmit on UHF, because the radio, when at lowest power, puts out legal power in the FRS frequencies, so i can talk to my friends who have FRS radios. That turned out to be kind of a waste though, so i just left it modified for the sake of not opening it back up and fumbling with rediculously small wires.
So yes, for a FACT some FT-530s (later models had some components changed and may not be able to get cellphones though...) do this, and many scanners do, and i've seen an alinco, and an icom do the same. I'm sure that there are many others.

Even though the US is the only country I know of to fight for the right of other countries to be able to listen to any radio they wish and then a few years down the road, turn around and make it illegal in our own country, I think many people can and do listen to cellphones... I tried to see if the mod sheet i followed was correct. But seriously, who would care to listen to a bunch of "hi hon, i'm on my way home, do we need milk?" conversations? Sorry, but even though my rig does it, i'll stick to scanning the police freqs, weather freqs, FRS freqs, and of course, the Ham freqs..

Eavesdropping just doesn't seem "right..."

;)

Polarization is not critical for HF frequencies since the signal scatters in
all directions when bounced off atmosphere. If you are receiving only --
then you can just put up a long wire and the shape of the wire is not too
important.

REPLY...

Not with GSM (the system used in Portugal). I suppose it is possible to pick up the GSM network, but not that easily. However, he might be able to use a modified radio to pick up the actual cellular phone (and local repeaters that are not on the GSM system), but that would be very limited.

He best bet would be to look around the internet for radio modifications, modify his radio, and hope he gets lucky. Or he could try to find the guy on the television program and ask him how he did it (ask the tv station for the guy's name and address).

More than just a radio is needed for GSM. GSM is a digital technology
(a form of TDMA). Some sofisticated hardware is needed to decode the
bitstream into audio. In the US AMPS and NMT in northern europe are
easily intercepted. (just FM analog).

Surely you know that, in the U.S., TRANSMITTING on a radio that is not approved by the FCC for that specific radio service is illegal. Just because a radio is approved for ham use does NOT automatically make it legal for any other radio service, including FRS. You may verify this with Yeasu.

Just a hint that you may want to be more careful about including your name, etc. when you may be violating a law.

I sell the following amplifiers HF, all under perfect conditions.
Ampli Collins 208U10, autotuning 2-30 Mhz, 10 Kw continues, with exciter Redifon/Harris.
4 Antennas Log periodic 2-30 Mhz 10-50 kw.
I have cable, connectrors, end more.
They take an interest you write me.

66. January Propagation Forecast

Newsgroup: rec.radio.amateur.dx
Date: 1998-01-07 00:00:00 UTC
From: ids@nol.net
Message-ID: <34b3fb4d.15525618@news.nol.net>
Source record: 30527

PROPAGATION - by AD5Q HOUSTON, TEXAS -- JANUARY 1998

It is now January - the month where nighttime MUF's are at their lowest. Last year at this time, the operation from Heard Island demon-strated what can be done at the bottom of the solar cycle from a remote location when the need is very great. As I write this, an operation from Laos has been activated and the need is also great. Contact with this Laos expedition may prove more difficult than Heard for DXers with average antenna installations.

For much of the USA, the main path to Heard was via the South Pole. This was not a problem on 20 because it was summer where polar windows are wide open. Contacts on other bands were more challenging because the flux was too low to open 15 and polar paths on lowbands are difficult anyway. This polar problem primarily effected western USA. The path to Laos is via the North Pole for the eastern US, and this is a difficult winter path even on 20 at current flux levels. The band closes at one end of the path just as it is opening at the other. Windows of opportunity will be of short duration, and propagation will favor other parts of the country (west). These openings will occur around sunrise and sunset, depending on your location. Both long path and short path should be watched - but both will favor the west coast. Similar possibilities look good on 40 for those with effective anten-nas, but chances of a contact are slim to none for those with wires. The west coast will have an easy path on 20 & 40, with opportunities on several other bands we can't even dream about. The last serious operation from Laos was in December '89 at the top of the solar cycle, and paths on both 10 and 15 were open from Texas. A surge in flux numbers would help hold the path open for the east coast on 20 this year. Good Luck in the pileup!

Aside from the Laos path, many continue to enjoy the new activity on 15 and 10. After a strong surge of new solar activity to start the cycle last fall, flux numbers have levelled off for now while the winter season works against us at the higher latitudes. Polar paths on 15 were sparse in the recent season, and this band still has much room for improvement. Seasonally, I feel this band is at its best in late spring. We can look forward to some interesting propagation in months ahead, though I don't see 10 Meters getting really hot until next fall.

For now it is lowband season, and that is where everybody is in the evening. Good conditions on 80 & 160 should be exploited, because this will be our last winter of low solar activity for some time.

This is incorrect. Saint Gilles les Baines is on Reunion Island. The
address above is correct except for the "Tromelin", as verified on Jean's
QSL which I have in front of me!

He is definitely on Reunion. I've worked him many times. He usually ends
his QSO's with "73 from island".

AND he's a great QSLer.

For most of Feb.98 J37Q (G3NBB) and J37P (G4RVH) will be operating from and old spice estate called
Brandon Hall. This is situated in the North of the Island of Grenada, and we will be using an
equally ancient but serviceable Atlas 215 on CW, SSB and SSTV, mainly on 20M. Signals will be beamed
to Europe and the US and there is a good opportunity for those who wish to contact this little
unspoiled island in the sun for the first time.

GSM isn't used just in Portugal, bot all over Europe, as well as in small parts of North America (Washington D.C. has a GSM cellular phone network for instance), and several countries on the Far East.

GSM is a digital cellular phone system which in addition encrypts the voice data to ensure privacy. Sure, you could receive those signals on any receiver operating at the proper frequency (around 900 MHz -- soon a new GSM band around 1800 MHz will be used too), but it would sound mostly like noise, and you would be unable to make anything out of it.

Cellular phone systems which can be tapped by radio receivers are older systems, which uses e.g. normal FM for voice transmission. In Scandinavia, for instance, the older NMT cellular phone system can easily be tapped, and so can various kinds of DECT (= "wireless phones") phone equipment - all that's needed is a radio capable of receiving the right frequency bands.

REPLY...

I only mentioned Portugal because that was where the original message came from (and where GSM was first mentioned). However, I was not aware that GSM had spread so far around Europe and the US.

The point I was trying to make in my message was that I had heard that some phones, and some repeaters, were still not digital, or encrypted, on some GSM systems (or at least that is what I have heard).

With luck, he might be able to hear these with a regular radio with the right frequencies (assuming such a repeater is nearby), but it would be very limited because most of the signals, on even those repeaters, would be digital and encrypted.

Of course, I could be wrong. All I have is second-hand information from a radio buddy in Germany (I am heading there soon, so have been digging for info about this type of stuff).

Michell!
It may look like you are posting a reply to me.....
My intention was just to reply to another post.
Personally, I like CW operation, and I operate several contests using cw mode on HF and VHF every year. CW activity seems to have increased in this part of the world during the 32 years I have been licensed, the CW sections of HF as well as VHF/UHF bands are often rather crowded.
Some friends like to operate cw because QSO's are simple, you don't have to make long talks when you have nothing to say, this in contrast to the rather boring QSO's heard on repeaters, so I decided only to operate cw/ssb except from fm packet radio (no speaker on my 2m FM rig).
We often find the American/ARRL policy to threaten amateur radio elsewhere, and it was not too many years ago you wanted to remove the 10m beacon band. There are several important beacons meaning a lot for amateurs around the world, but packet radio seems more imprtant to ARRL?
I sometimes wonder who is ARRL, we see a lot of directors and subdirectors, what sort of amateur radio organizations it this?
In most parts of the world amateur radio organizations seems to operate from very much people who work for something they believe in, not to make money.

REPLY...

Welcome to the debate, Michelle. I won't comment heavily on what you said, because I agree with almost everything. I just wanted you to know you are welcome, and look forward to your comments in the future.

Having said all that, I will disagree with one aspect of your message - your rather pessimistic view of the hobby. I think Amateur radio can be healthy again.

The use of radio is growing strongly in America. This is certain to attract new people to Amateur radio. But, whether they see it as a way to learn an interesting technology, or a way to increase possible job opportunities (learning radio skills), people today are more interested in the technical aspects of radio, rather than more "archaic" aspects like Morse code (simply because they don't see it used elsewhere).

The technician license has attracted a lot of new people to Amateur radio (it is the fastest growing license class). If the code requirement was also dropped from some of the other license classes, I think Amateur radio would see a resurgence like it has not seen in a great many years. I even think that the number of people using code would eventually increase (more people, more possible code users).

So, I have a little more optimistic view of the future of Amateur radio (perhaps because I want to see it continue so badly). Like you, I think dropping the code test requirement is one way to insure that.

Dwight Stewart (KF4URZ)

If I may throw in my two cents worth? Enjoyed both of your posts and would like to comment.

It may be that knowing the code is no longer as important as it once was. It is still a very useful mode and attracts many amateurs, despite the nay sayers. Still, realistically, I agree that knowing 13 words per miute to get HF privelages on all bands is a bit much for some people.

On the other hand, I am afraid that doing away with the code will allow more CB intellects into the bands and decrease the quality of HAM communications. One reason I started in the hobby was the quality of people here. Some of the more vociferous bashers of the code, like "cutie boy" are people we should use the requirement to keep out of the hobby.

The no code tech license was meant to bring more new blood into the hobby and it has. Unfortunately, many of these people are good hams and get turned off by being so constrained to the upper bands.

The ARRL and FCC made it very easy to get a no code license, it does bother me that completely doing away with the code for HF would, again, bring in the rif raff of CB types.

Conclusion, I would support a reduced code requirement that would allow what is now considered a "general license" to those passing CW test of five wpm. Of course, the written exams would still have to be passed.

Sub conclusion, to me, the most rewarding part of this hobby is the knowledge gained in studying for my license. Indeed the spirit of Amateur radio should not be just selling more radios, or for that matter just jaw boning on the air (although I do like that), but the thrust should be to educate the amatuer, especially those without a technical background, to the wonders of electronic communications.

P.S. Maybee I appreciate the hobby because I do not come from a technical backgraound but have gained much knowledge by my participation.

SB DX @ WW $OPDX.339
Ohio/Penn DX Bulletin No. 339

The Ohio/Penn Dx PacketCluster
DX Bulletin No. 339
BID: $OPDX.338
January 12, 1998
Editor Tedd Mirgliotta, KB8NW
Provided by BARF-80 BBS Cleveland, Ohio
Online at 440-237-8208 28.8k-1200 Baud 8/N/1 (New Area Code!)

Thanks to the Northern Ohio Amateur Radio Society, Northern Ohio DX Association, Ohio/Penn PacketCluster Network, WA4FFW, KP3L, K4VUD, N6RT, KI6WF, KN6DV, K7WX, W8AV, W8CNL, KG9N, HB9LEY, OH2BVE, PB0ALB and PA3AWW for the following DX information.

8Q7AA, MALDIVES (Update). From an updated press release provided by Warren Hill, K7WX: The upcoming 8Q7AA DXpedition to the Republic of the Maldives by members of the Central Arizona DX Association (8Q7, Zone 22) remains on course. The team leaves from Los Angeles on January 15th, and will be active from the Indian Ocean beginning January 18th or 19th, with 24 hour operating on most bands through January 28th. They will be located on Alimatha Island in the Felidu Atoll, latitude: 03 degrees 35' N and longitude: 73 degrees 30' E. This location is also designated as IOTA AS-013. Members of the 8Q7AA DXpedition team will be as follows:
CW Team - Bruce/N6NT, Darryl/AF7O, Warren/K7WX and Steve/N7TX
SSB Team - Oscar/KP4RF, Sally/KM5EP, Rich/K7ZV, Victoria/KC7TIW, Dan/NA7DB and Paul/W8AEF
Bruce Sawyer, N6NT, will also run HF RTTY as operating time permits. Ibrahim Ahmed, 8Q7QC, will help with HF SSB and provide local assistance. There will be four stations running Yaesu FT-1000MP transceivers and Alpha amplifiers on 160 through 10-meters, including all WARC bands. Many of this team were also members of the 1996 XZ1N Myanmar operation. A concentrated effort will be made on the low bands with adequate power and antennas. Several in the group will focus on 40, 80 and 160-meters, with special attention being given to Kboth sunrise and sunset terminator openings at North America. It is understood that 8Q7 is not all that rare for European stations, but for North America, and especially on the low bands, this is a very difficult path. For this reason, many of their efforts will be directed towards working into zones 3, 4 and 5, where the need for zone 22 is still quite strong. QSLs requests for confirmation of contacts with 8Q7AA can be made by either direct, QSL bureau or E-mail routes. Cards should begin to go out within two to four weeks of their return. Direct QSLs go to: Steve Thompson, N7TX, 119 E. Jasmine St.,

Mesa, AZ 85201-1811 USA (Please enclose an SASE with adequate postage). Bureau QSLs cards should be clearly marked: 8Q7AA via N7TX. Internet Bureau QSLs can be requested by sending e-mail to: 8q7aa@cadxa.org (The SUBJECT line should read "8Q7AA QSL REQUEST", followed by the appropriate information in the body of the message.) More complete details are available at their WWW home page: http://www.cadxa.org/8q7aa
ADDED NOTE: OPDX InterNet Subscribers will receive the complete (long) press release by Warren, K7WX, as an additional bulletin.

9G, GHANA. Three Dutch opertors (PA3AWW, PA3DEW and PA3FQX) will once again activate 9G1AA, February 4-25th. Operations will be from Dormaa Hospital in Ghana. Operations will be on CW and Phone, with activity on all HF-bands, including 50 MHz. They will have a 6 meters beacon on the frequency 50.123 MHz. They will also train some local amateurs in using the Yaesu FT 920, donated by the STARS-organization, IARU region 1. The QSL Manager will be PA2FAS.

9K, KUWAIT. Bob, 9K2ZZ, is once again active from Kuwait. His stay this time will be about 1 year. It is reported that, at the moment, Bob has only a 40 meter dipole, but it is very high atop an apartment building. He will be installing a TH6DXX soon. Currently he is running a TS-930 with an AL-800H amp. His QSL Manager is trying to work out a "Battle Creek Special" on loan for 160 meters. Bob will work the WARC bands in the future and is active on CW and SSB and maybe RTTY later in year. He can be found on 40 meters CW most days between 1900 and 0200z between 7003 and 7005 kHz. Per his QSL Manager Ray, W8CNL, "At his (Bob) instructions, no bureau cards will be accepted or answered. Only S.A.S.E. or S.A.E. and postage to me direct."

9N, NEPAL. Charles, K4VUD, will be traveling here February 19th, and states he will be active as 9N1UD. He will return to the USA on March 8th. He plans to be active in two contests during the two weekends after the 19th (ed. probably the ARRL International CW DX Contest and CQ 160 Meters Phone Contest). Also, he is looking for any donations (prior to February 15th) of equipment/gear for 9N1AA. Charles's E-mail address is "harpole@pegasus.cc.ucf.edu", and his snail mail is: Charles Harpole, 3100 N. Hwy. 426, Geneva, FL 32732-9761. ADDED NOTE: While Charles is in Nepal, he will make a side trip (with NO radios) to Bhutan (A5) between the above dates.

HB0, LICHTENSTEIN. Joe, HB9LEY, will be active from here as HB0/HB9LEY next weekend. He states that he will look for North America stations between 0430 and 0630Z, and for JA and Pacific stations between 2030 and 2230Z (January 17th and 18th) on 1830 khz. QSL to JH1BSE, Masa Yamamura 2-10-6 Arai, Nakanoku Tokyo 165 Japan.

NEW OFFICIALS. The SCDXC (Southern California DX Club) has announced their newly elected board: President - Will Angenent, KN6DV; Vice President - Harvey Laidman, W8DX; Secretary - Jim Zimmerman, N6KZ; Treasurer - Charlotte Iseda, KB6FXS; Membership - Harvey Shore, K6EXO; Board members - Neil Kaltman, K6SMF; Cathy Gardenias, KF6LFB; and Larry Shapiro, K6RO.

OOOPPPSSS! There was a mistake in last week's bulletin (OPDX.338). The operator and QSL Manager mentioned under 9M8 (East Malaysia) was incorrect. Operator/QSL Manager should have been Peter, PB0ALB, and not PA0ALB. Please make the necessary changes.

QSL INFO AND NEWS....
Chuck, KG9N, operated the special event station N9N in Woodford County, Illinois, from December 28th to January 4th. He states that he made about 1800 QSOs, mainly with Europe. QSL via KG9N.

Doug, N6RT, reports he finally received the following QSL cards from the printer: FO8DX/FO5VO/FO0BRD/FO0KEO/FO0MIT/FO0PLA/FO0SPE. Doug states these cards are for their October, 1997, operation from Bora Bora. Doug has indicated that he has already started sending out his FO0BRD cards, and will be giving the other operators their cards within the next couple of days. So, their FO QSLs should start appearing shortly. Also, he states, "Thanks for your patience!"
QSL cards for FO contacts go to:
FO8DX via KG6AR (1997 CQWW SSB ONLY) FO5VO via N6VO
FO0BRD via N6RT FO0KEO via N7CQQ
FO0MIT via W6RW FO0PLA via W8AEF
FO0SPE via KG6AR

ROUTE CHANGE. The KP3Z QSL route has been changed, and it will no longer be via WC4E but via NP3HM. Please QSL KP3Z via NP3HM direct. Also, WC4E will only handle QSLs for NP4Z.

Steve Salmon, AA6LF, has a new QSL manager. Gerry Branson, AA6BB, was Steve's QSL manager until he became a Silent Key (SK). Steve's new QSL manager is: Ron Lago - AC7DX, P.O. Box 25426, Eugene, OR 97402 U.S.A. Ron has all of the logs and cards for the following operations by Steve: AA6LF, FO0SST, ZK1XP, AA6LF/KH5 Palmyra, XE2/AA6LF/XF1 Isla Marieta, ZK1ALF, FW/AA6LF, A35SS Minerva Reef, 3D2LF, VK4ALF Great Barrier Reef, VK4ALF/VK9M Mellish Reef and VK4ALF/VK9 Ashmore Reef.

Mac, WA4FFW, reports that ALL cards received for the N4BQW/KH5 Palmyra operation have been mailed. Notice "ALL", this includes all cards received to date via any means. They were placed in the mail January 10th. This also included ALL QSLs for Chuck's other operations: N4BQW/KH6 Tern Island, N4BQW/KH7K Kure Island, N4BQW/KH4 Midway and N4BQW/KH5. Mac states, "Thanks to another Herculean effort by WJ4T, who did most of the work, and made this quick turn around possible."

TG0, GUATEMALA (Update). Jari, OH2BVE, provided OPDX with the following update to the Finnish operation to TG-land which will take place January 18th to February 5th. The Finnish team is hoping to used the callsign TG0OH, but this has yet to be comfirmed. Operators will be Toni/OH1TD, Heikki/OH3JF, Hessu/OH6XY and Raija/OH7LIX. Jari states, "Contrary to some bulletins indicating OH2NSM will be in the group, this is not true. Oliver, OH2NSM is busy building up new house/QTH for himself and his family. Therefore he cannot attend this expedition." QSL via the bureau or direct, but Jari indicates that the following addresses should be

used to QSL. For RTTY QSOs, QSL via OH6XY, Carl-Heinz Ikaheimo, Meijeritie 2 AS 28, FIN-21530 Paimio, Finland (NOTE: The address in Callbook for OH6XY is old and should not be used!) For CW/SSB QSOs, QSL via OH3JF, Heikki Tamminen, Eprantie 4, FIN-11710 Riihimaki, Finland.

VP5, TURKS AND CAICOS ISLANDS (A special callsign to be used). Look for the Caribbean Contesting Consortium (CCC) to activate the Turks and Caicos Islands from Jody Millspaugh's site (VP5JM) February 14-28th. The group plans to be a major multi-transmitter unlimited entry in the 1998 ARRL DX CW Contest. Operators will be Doug/K4LT, Dan/K8RF, Jeff/KU8E, Goose/W8AV, Tom/W8TK, Noel/W9EFL, Ken/WA9S and Geoff/W0CG. The operation will also include a support crew consisting of Lora/K8LJK, Anita/KC8BBE, Steve/N8LGP and several of the non-ham XYLs. A special callsign of VP5FXB will be used during the contest in memory of longtime FOC member and avid contester Al Slater, G3FXB (SK).("No finer gentleman ever graced the ham bands!")
Individual operators will sign use VP5/homecall outside the contest.
QSLs for VP5FXB go to W8AV either direct with an SASE containing sufficient return postage, or via the bureau. Direct cards mailed without an SASE will be answered via the bureau. All contacts will be confirmed. QSLs for the individual operators are via their respective homecalls. Look for significant post-contest publicity on the operation, including a presentation in the Contest Forum at the Dayton Hamvention in May.
The team would like to send a special thanks to Ten-Tec Corporation for support of this undertaking. Also, for more details please take a look at their WWW site at: http://asgard.kent.edu/ccc/vp5fxb/vp5fxb.htm
The CCC crew is presently searching for additional operators to participate in the contest. Anyone interested should contact W0CG (ghoward@kent.edu), K4LT (k4lt@fuse.net), or W8AV (w8av@aol.com) or check the WWW site (above) for more info.

>"cutie boy" are people we should use the requirement to keep out of the
>hobby.

Note that "cutie boy" has passed the Canadian solid copy requirement
at 5 WPM, which tends to dilute your position.

Even a flatworm can be conditioned to run mazes. It takes no intelligence
to copy Morse, just Pavlovian conditioning to respond to tone sequences.
In fact, if you try to think, you screw up. So if Morse selects according to
intellect, then it would tend to select disproportionately those of low intellect.
If that is the sort of unthinking quality you want in amateurs, then Morse may
be the filter for you. If we have any hams with high intellectual capacity, it is
despite the Morse tests and not because of them.

The reason CB is the way it is has nothing to do with a lack of Morse tests.
It is the way it is because CBers can hide behind anonymous "handles"
like figures in a masked mob. They can do any anti-social thing that they
like without much fear of consequences to their reputations in the real
world. OTOH, amateurs have traditionally proclaimed their "true names",
IE their call signs, loudly and frequently, and demand that others they
contact do the same. They exchange their home addresses for the
purpose of exchanging postal cards. This strongly affects behavior by
stripping away the security of anonymity. It isn't a 100% control on
behavior, but it is the major self-policing factor among amateurs.

The fact that the FCC has stopped enforcement against those who can't
or won't police themselves, first among CBers and now among hams,
hasn't helped matters, of course. But Morse tests have nothing to do with
behavior, good or bad. They just demonstrate that one is susceptable to
Pavlovian conditioning, like the dog which becomes conditioned to salivate
when the dinner bell is rung. If a dog can be conditioned do that, any "riff-raff"

CBer can be conditioned to receive Morse. But just as the dog remains a dog,
so too do the "riff-raff" remain "riff-raff" whether they beep or not.

Finally! one of the procoders had the guts to say and prove that the CW requirements have nothing to do with CW being anything more than a a ritual rite of passage, designed to keep the wrong people off the HF bands. When you strip away all the myth around CW your left with one simple fact: CW is nothing more than a filter to restrict access to the HF Bands. Any other reason is a fallacy and is being used by pro code advocates for misdirection.

Do you have anything to reference to that? From my experience it sure seems like a lot of the repeaters in the area are starting to sound a lot like the crap on 11 meters. Even to the point of the 10-4 good buddy type conversations. I don't seem to find nearly as much on HF phone and have never really noticed it on CW.

OK all you No-Coders--There it is. Straight from the Horses Mouth.
Morse code is the easiest thing in the world to learn, nothing hard at
all about it. Just a little Pavlovian Conditioning, any ordinary
tapeworm can do it.

So what say let's get off this no-code nonsense and get on with
spending our time advancing ham radio as *Real Hams* and stop this
phoney bullshit of griping about how hard it is. You have every one been
shown up as phonies by one of your Priests of High Technology himself!
Surely you all don't want to be shown up as being dumber than the
average Pavlovian dog's tapeworm, now do you?

> A 'test' will not, in and of itself, guarantee competance, ability
> or even a non-anti-social personality.

I think a great many people have the wrong idea about the license tests in Amateur radio. The Amateur radio tests are not, and never were, designed to test competence, or ability. They are just a basic test of rules, safety, and elementary operating knowledge, to be used at a given license level.

The whole purpose of Amateur radio is for non-professional people to experiment, and learn, about radio. The competence, and ability, comes after you get the license (not from the license itself, or from the test for that license).

For example, the Novice, and Technician, tests are designed to keep people from electricuting themselves, frying their brains with RF, blowing up their radio (or themselves), or interfering with the rest of the radio community, while they are learning and experimenting. The other license tests only expand on this basic goal.

Of course, there is only so far one can go with a test - no test is going to stop an idiot from sticking his hands into a 1500watt linear when he should not. But, if the idiot survives, he will have learned something (if nothing else, not to do that).

Anyway, back to the discussion. Read the basis and purpose of the Amateur service as described in section 97. 97.1(b) says the amateur service is for the "Continuation and extension of the amateur's proven ability to contribute to the advancement of the radio art.

97.1(c) says "Encouragement and improvement of the amateur service through rules which provide for advancing skills in both the communications and technical phases of the art."

Note the words "continuation," "extension," "improvement," and "advancing," in those paragraphs. No license was supposed to be an end to the goals of the license holder. It was supposed to be a beginning of the learning at that license level. Each license holder is supposed to continue to improve and advance beyond their present level of knowledge (and that includes the Amateur Extra).

What I am trying to say is that each test is an introduction to what is needed to safely learn during the next level, not necessarly a test of stuff learned in the last level. The amateur is supposed to take

what is on that test and go out in his/her world and apply it (through experimentation and usage).

To take this further, no amateur license, or test, is supposed to be designed to keep people out. Part 97.1(d) continues on to say the purpose of Amateur is the "Expansion of the existing reservoir within the radio service of trained operators, technicians and electronics experts.

So, a primary purpose of Amateur radio, and by extension the tests, is to bring people in, not to keep people out. This purpose is different from say the commercial radio license, or even the pilot license you mentioned.

In each of these cases, the people receiving the license are using them out in the real world (where people's lives, safety, or comfort, depend on these people).

In the case of the commerical radio license, the holder of this license is responsible for insuring that the information, which might affect people's safety or comfort, continues to reach them. This license is designed to insure the license holder is capable to doing that. And the purpose of the pilot license is obvious.

But, this is not the case of the radio amateur. Others do not HAVE to depend on us for their safety or welfare. Note this is different from where we volunteer to offer such services and people choose to depend on us for information which might effect their safety, or for the exchange of information which might affect their welfare.

The amateur radio service exists mainly for the amateur radio operator to learn. It is the amateur radio operator who receives the benefit from the amateur radio service (through self-education).

The tests, at each license level, are only designed to give the operator the basics needed to continue that self-education at that license level. They are not a test of competance, or ability, at that license level.

Of course CB didn't come along until about 1957 or 58. I operated 11 m as a beginning ham in 1956-7 when the band was screaming (as were all bands). Had a ball working the hi freqs when the sunspot cycle was fabulous! CQ 10 ... This is K0DON..... Let the fun begin.

Walt,

This is absolute rubbish. It has no basis in fact at all and
you should know that. IF CW acted as such a filter then
we'd expect to find the riff raff of CB types (not a description
I agree with by the way) on VHF and the simple fact is
that we find no more or less bad apples on VHF (the nocode
techs) then we do on HF where code is required.

There has been absolutely no statistical support for any
assertion that code filters out while the theory test
doesn't.

I entirely agree. It appears the debate, although centered on the Morse issue, is really about who we should keep out of amateur radio. Although there are some among the pro-code group who are sincere in their views about the merits of code, I think most defend the code requirement simply because they fear the unruly hoardes which might be unleashed onto their bands. The thing that none of them would admit is that they are not so much pro-CW as they are anti-CB. They aren't as much pro-code as they are anti no-code. They use their "virtue of code" arguments as camoflage for their deep-seated resentments of those with views and values which differ from theirs.

Who we should keep out, or rather how many we should keep out - perhaps that's the issue. The more people we keep out, the more "special" we are - the more exclusive the club, as it were. Those who show the greatest concern, I feel, hold this "exclusivity" in highest regard - higher even than code itself.

It is their fear that motivates them to defend the code tests against all reason - fear of losing.....something. What else besides fear - fear of the unknown perhaps - could explain the ferocity with which they maintain their claims about the necessity for a radio operator to manually modulate and demodulate the encrypted message on a carrier. Yes, CW is a unique feature of the amateur service - one which will naturally persist until the point when, if ever, it becomes completely unsatisfactory to use by everyone under every circumstance. Personally, I would mourn the loss - just like I mourned the loss of our national treasure Jimmy Stewart. That loss was of course inevitable.

The code group argues against something which nobody here has proposed or would wish to achieve: to make getting licenses easier for it's own sake, and to let the un-ruly take over the bands. And they do this using the

guise of upholding standards and defending the practicality and efficiency of Morse.

There is no "need" to make licenses any easier to obtain. There is likewise no need to make it more difficult than necessary. (After all, not everyone aspires to be like us!) The best thing you can say about the code requirement as a filter is that it sorta keeps potential LIDS out - kinda - as well as other folks. But all of the exams do this - with similar efficacy.

It's probably true at this point that 1A "filters" out a greater number of people than does element 3A. On the other hand, elements 3b and 4 probably "filter" out more than element 1B. This should argue for a shift in that direction - toward more comprehensive written exams, and away from code exams.

All it should really take to appease the loyal opposition is a proposal to change the exam structure in such a way as to maintain the current efficacy for "LID filtering" as a replacement for the code test. That efficacy is not significant, but it is also not negligible. A suitable answer for the question of "maintaining standards" will have to be found before there could be hope for resolution on this issue.

These notions of work ethic, earning a license, devotion to the hobby/service, must eventually be dispelled and give way to discussions of requisite and relevant operator qualifications. Morse could continue to be a part of that discussion. But our emphasis in testing that mode should ultimately fall into place along side the other equally important modes we use.

Until then, I guess we'll just continue to hear about how hard some of us worked for our license back in the old days, and how lazy and whiney everybody else is. Keep it coming guys, it's really impressive to listen to - and oh....very persuasive as well!

There you go again, Dick. Gary said absolutely nothing about tapeworms
learning Morse code. He talked about flatworms learning how to run
mazes. Can't you even get such a simple set of facts straight? Are you
so ignorant that you don't know the difference between a flatworm and
a tapeworm?

Cecil is playing with words again, trying to make everyone else look stupid, a favorite passtime of his.

What he is actually saying is that the users of 11 meteres in the early 1950's--hams of course--sounded *exactly* like the rifraff they were at the time!!

This is not his first excursion into wordplay where he implies/insinuates/indicates one obvious meaning, then tries to make a reader look like a fool when he "misintperprets" Cecil's wording.

Of course no misinterpretation took place, it's just that Cecil likes vague, double and triple meaning phrases intended to confuse. We're on to you Cecil, Old Chop!

No wonder he doesn't like to talk to strangers on the air. I'm beginning to think Cecil doesn't like ham radio operators any more than Lennie.

It may be illegal in the US of A but not everywhere......here in the Great White North it is legal to listen to any wireless signal be it celluar phone, baby monitors, cordless phones, gov't stuff or anything else as long as you don't repeat it or use it to your own benefit... ie...stock market etc.....Whats the difference between listening to your neighbour on a cell phone or listening to the police making a report about your neighbour (which, I believe, is legal in the U.S.A.). If you are using a wireless transmitter, you should have the common sence not to devulge any personal information over any wireless transmition anyways....

Allocations of frequencies aren't private by anymeans and if you have the receivers to receive or the software to decode then you should have the right to listen.....it may not be moral but it shouldn't be prohibited.

There are mods on the internet for just about any amateur radio to receive cellular as well as non-distructive mods (non-permenent) for most cellular phones to become cellular scanners. And I'm sure that someone is working on or has already developed a way to decode digital encryption for celluar phones.....it's only natural...something we can''t have, we want!!

My 2 cents worth anyways....

If you hve an atlas and look it up. you will find it just above Baku and on the north side of the mountain range just 'upcoast' from it. The area is an oblast, Russian word similar to the use of the word state when talking about states in the United States.

It didn't carry, as far as I know, a separate status in the DXCC list and I think does not now show a separate listing. However, that area of Russia is VERY heavy in oil production. As I recall, it is an area of light weight crude. Grozny is listed as an oil intensive city, My recall of World War II is this area was the area that Germany was trying mightily to reach to supply the light weight crude needed for the refineries of that time, as the Arabian area oil was not an issue back then, Mired in Russia after being faced with heavy Allied action from the French/English side, the Germans couldn't make it through Russia to these terribly needed fuel source regions from that direction. The push from the other direction through North Africa saw a curious thing happen. They had such horrible fuel supply problems in trying to haul fuel to the tanks et. al. over the 2500 mile run into the Egypt area across the top of Africa, that they simply ran out of fuel trying to keep the African push going in the race to Grozny. They were producing aviation fuel from coal derived processes, but when they lost those plants to Allied bombing, the air force was essentially useless - lost war.

Today, Russia is on the verge of a huge new oil industry WAY beyond what they even have and had, per information I have heard. New finds in the Baku and Grozny area are so huge that they have been reported here in the USA to be comparable to the total holdings of the Arabian areas! A Turkish pipeline should be bringing that all out to the Baltic in about two years. We are drowning in oil at this point,,,

That said, it seems logicical to assume that this area will play a very much more important part in the Russian scheme of things, as the conflict in the area would suggest. It would seem that self-government that would leave the oblast as a similar situation to Azervayjan and so on, would see it get its own call area, "country" status and so on as a

new one with the 1X call that you have noted. Although small, the oblast, actually two of them woven together since about 1926, would be good targets for a new one if DXCC were to regognize it.

It would seem they may have the ecomnomic clout now to demand and get that status, perhaps, in the Russian scheme of things...

For what this is worth... just an observation and a personal opinion, from me... Nothing more.

All that I want to add is. Radio freq. Move Thru FREE space. They also enter my home and my body. I feel that if these wave enter my home or body I can do with them as I please. This means I can take these waves that enter my home and demod them the way I want. I have a right to know what is in my home, in my body, and in FREE space.

Nuf' Said......

Unfortunately, no, it doesn't count yet for anything. Just like all my
1B, 1C (also Chechnya), 1P, T00 etc. cards!

Why have I just read about 50 messages on the DX reflector and found only
2 that were related to DX? I thought the newsgroup was going to trash
quite a few months ago. It's even worse now!

So how 'bout some DX talk?

> Thank you.............Fetter.............

Hi Fetter
Assuming you help the DX stations with return postage -- Oh wow -- 600
at an IRC a piece. Would suggest using the ARRL outgoing Beaureu for the
common ones. You need to be an ARRL member -- here is a quote from ARRL
"One of the greatest bargains of League membership is being able to use
the
ARRL Outgoing QSL Service to conveniently send your DX QSL cards
overseas to foreign QSL Bureaus. Your ticket for using this service is
proof
of ARRL Membership and just $4.00 per pound." "Approximately 150 cards
weigh one pound"

For more info see URL:
http://www.arrl.org/qsl/qslout.html

For the rare ones -- return postage is a must. Many have managers, some
stateside -- these can be found at URL:
http://pw2.netcom.com/~ac6v/page2.html
Includes several on-line DX Callbooks as well.

Good Luck
Rod in San Diego

145. French Overseas Islands Award (DIFO)

Newsgroup: rec.radio.amateur.dx
Date: 1998-01-15 00:00:00 UTC
From: "Gil Gautier (F5NOD)" <f5nod@worldnet.fr>
Message-ID: <69jiedqgr1@news2.isdnet.net>
Source record: 30506
Cross-posted to: japan.radio,nl.radio.amateur,rec.radio.amateur.dx,uk.radio.amateur

You can find all info on my web page:
http://home.worldnet.fr/f5nod/

*** LYON DX GANG ***

D.I.F.O. : DIPLOME DES ILES FRANCAISES D'OUTREMER

French Overseas Islands Award

D.I.F.O. is sponsored by the LYON DX GANG. It has been created to encourage and award Amateur Radio Stations around the world, to contact or activate french overseas islands. It may be claimed by all licensed amateurs and SWLs.

All contacts after January 1st 1980 are valid.

The award is issued in 3 divisions: MIXED, PHONE, CW.
All contacts must be made on authorised bands between 160 and 10m.

BASIC AWARD : 10 different french OVERSEAS islands.
ENDORSEMENTS will be given by groups of following 5 islands.
(e.g. 15-20-25-30...). Plaque Endorsements will be by group of 10 islands.

All contacts must be made from the same country.

QSL's must be in the applicant`s possession. Each request must be done with a photocopy of each QSL cards. Originals may be requested in case of doubt !

Activators can count the islands as same as the chasers.

Applications for the award and endorsements should be sent to:

Award Manager
F5JJW, SUC Joel
La Grange
69440 Taluyers
FRANCE

The service charge for the BASIC AWARD is FF 60,- or $ 12,
(add 10 FF or $ 2 for return postage)
ENDORSEMENTS FF 20,- or $ 4 each.
(add 5 FF or $ 1 for return postage)
PLAQUE : The top honor roll level is awarded by a free plaque for qso's with 50 islands. BUT, you MUST have requested before each following endorsements : 15-20-25-30-35-40-45.

The reference will depend of its DX country location, in a way to put the
prefix at the beginning of each reference, followed by a serial number. (e.g. FO-001
CLIPPERTON island)
We consider valid any island surrounded by salt water outside Europe and belonging to
France.

The award manager is the only one authorized to give new reference numbers and request must
be made directly by the DX'peditioner.

To be valid an island must have :
- An official name.
- A french territory prefix where the island is located.
QSLs must clearly show the island name. If it is not the case, the island will be valid for
the main island of the archipelago !

The award manager decision is final.

RULES MAY BE MODIFIED IN THE FUTURE IN A WAY TO IMPROVE THE INTEREST OF DIFO

D.I.F.O. : DIPLOME DES ILES FRANCAISES D'OUTREMER

French Overseas Islands Award

148. Antenna in Japan for BBC SW...?

Newsgroup: rec.radio.amateur.dx
Date: 1998-01-15 00:00:00 UTC
From: groveti@bigfoot.com
Message-ID: <B0E3FA799668178B4C@0.0.0.0>
Source record: 30509
Cross-posted to: rec.radio.amateur.antenna,rec.radio.amateur.dx,rec.radio.shortwave,uk.radio.amateur

I'm using a Sony SW-100 with its stock 6-meter line antenna joined (not coupled) to a 10-metre length of standard PVC-covered antenna wire. I'm on the top (5th) floor of apartments facing south-south-east, and I've run the antenna vertically 3 meters, then 7 metres along the top rail of a fence made of 13mm/half-inch mild-steel bars (i.e., many verticals + two horizontal rails).

Reception is pretty poor, but I can't make any major changes in the layout except use my 7-metre long balcony (same fence design).Like the roof fence, it faces towards Hong Kong and Singapore, the major BBC relay stations around here

Any suggestions? The Sony antenna tuner/amp AN2 made no difference. Would dropping a vertical wire (max. 6 meters) be better? Insulation from the fence?I've thought about cutting the roof fence from earth with insulators so I have a 7m x 1.7m mild steel array, but I think the Apartment Police would object...

DD

149. BBC World Service winter freq's on-line?

Newsgroup: rec.radio.amateur.dx
Date: 1998-01-15 00:00:00 UTC
From: groveti@bigfoot.com
Message-ID: <B0E3FA7A9668178B8B@0.0.0.0>

Lost my BBC magazine here in Japan.

Is there an on-line site for winter frequencies? an FAQ?

Maybe even e-mail addresses for Bush House, etc?

Thanks

DD

With anything but the deafest of receivers, you're almost always going
to be limited by external noise, rather than by lack of signal. Unless
you're very unlucky, the polarisation and orientation of your antenna
will hardly matter at all, and you certainly won't need extra
amplification. So the thing to do is to minimise the noise.
If you use a directional antenna you can reduce the QRM from distant
sources - but you don't have the space. What you may be able to do is
to reduce pickup of locally generated QRN, which will be carried on
power cables, ungrounded metalwork like that fence, etc. If you can,
run your wire in the open well away from other metalwork like this.

FWIW the best time to look (in Japan) for signals from Singapore at present
is 7-9h GMT, around 20-25 MHz, and from Hong Kong 0-9h GMT, 20-30 MHz
and maybe below. Hong Kong should be the better option.

Michelle, While I totally do not disagree with you, how can you explain the growth of amateur radio world-wide? All countries maintain a code requirement by international agreement. I would submit, that Americans by in large are LAZY. Myself included. Yet there are countries that are experiencing rapid growth in this hobby. My guess is that there are many diversions to amateur radio in the United States. However, I was shocked to find that it is the IN THING at MIT to be a computer science nerd, and earn a ham radio ticket by at least PASSING the 5WPM code test! So possibly it is YOU who is not plugged in.

For the information of the stations who worked VO500JC this past year, all contacts which were not previously QSLed direct have been processed and the cards have been sent via the bureau. I have also replied to all direct QSLs to date.

Since we are pretty well out of cards at this time, any further direct requests will not be filled and any green stamps or IRCs will be returned promptly.

If you have any questions about this operation or your QSL status, drop me an email.

GO AWAY!!!!!!!!!!!!!!!!!!!!!!!!!!!!

tsunkndj@tickling.net randomly organized the following:
:-=-
:-=- Are you a guy between the ages of 18-23 who is
:-=- HOT, TICKLISH, and IN NEED OF SOME U.S. CASH?
:-=- Or, perhaps, even a new NEC Ready PC with a Pentium Pro
:-=- processor? If so, read on... I'm very serious about what you'll
:-=- find.
:-=-
:-=- UPDATE: Right now, I have 3 NEC Ready 9716 PCs available,
:-=- featuring:
:-=- 56 kbs US Robotics X2 modem
:-=- 4+ gig hard drive
:-=- 32 mb RAM
:-=- Video Card/2 mb video memory
:-=- Built-in Zip Drive
:-=- 24 speed CD Rom
:-=-
:-=-
:-=- Other PC systems are also available.
:-=-
:-=- My name is Terri. I am a female college student in the Boston area.
:-=- As a hobby...one that costs me ALOT of money...I maintain a
:-=- personal collection of amateur videos featuring guys being
:-=- tickled (usually for 30 or 60 minutes) by a girlfriend, good girl
:-=- friend, girl friends, or even guy friends. I am not a business,
:-=- video trader, or porn solicitor. My interest is in TICKLING.
:-=-
:-=- I am actively looking for guys to make videos that I can add to
:-=- my collection. Guys that interest me are YOUNG (basically,
:-=- my age...18-23), HOT (swimmer/soccer/runnerbuilt....on the
:-=- thin side...not too "big-n-buff"....with little or no bodyfat
:-=- whatsoever), and TICKLISH! No sex or nudity are wanted in
:-=- my videos. I just want to see guys tied up and mercilessly,
:-=- relentlessly TICKLED.
:-=-
:-=- If you are interested in this UNIQUE (and hopefully FUN) way of
:-=- making $$$$, please e-mail me. I need you to provide me with
:-=- a general picture (.gifs, .jpgs, .bmps, and pictures found on
:-=- webpage URLS are fine...and I have a mailing address to "snailmail"
:-=- regular photos, also) before I can make you a concrete cash offer.
:-=-

:-=- Average fees paid:
:-=- $125 for a 30 minute video
:-=- $250 for a 60 minute video
:-=-
:-=- PCs are available for multiple video deals and to groups of
:-=- guys (frats, teams, etc) that make videos.
:-=-
:-=- Money offered is determined by your looks, ticklishness, and who
:-=- will be tickling you.
:-=-
:-=- Asian, Black and Hispanic guys are ESPECIALLY welcomed and wanted!!!
:-=-
:-=- I have numerous online references that are available for contact to
:-=- assure you of my honesty, legitimacy, and SERIOUSNESS about all of
:-=- this.
:-=-
:-=- PLEASE NOTE: This is not a TICKLING SERVICES AVAILABLE
:-=- POSTING. I have a boyfriend, full cadre of friends, and plenty of
:-=- guys to tickle already. I AM NOT LOOKING TO MEET OR TICKLE ANY
:-=- GUYS ENCOUNTERED FROM CYBERSPACE!!!! I also do not provide
:-=- videotaping equipment, facilities, or girls to tickle you. All
:-=- aspects of video production are your responsibility!!!!!
:-=-
:-=-Think about it!!! E-mail me if interested: TerriTickling@hotmail.com
:-=-
:-=-
:-=-
:-=-

First let me appolagize for butting in on a discussion that I probalby have no bussiness getting in to.
I myself have yet to get my licence, but one day I hope to get it(when I get the time to study for it).

from what I've read of this discussion, it seems to me that the consern here as J Kelley said is
that it's not that people want to maintain the standard requirements to get in so much as it's
the standards of conduct. so wouldn't it be more appropreate to makee stricter policy on conduct.
that way the goals of the amateur service are maintained, and it will still filter out the "CB riff raff"
that you don't want.

once again, I appolagize for intruding(and for any spelling mistakes I made)

Hope to be able to talk to some of you on the air one of these days

First let me appolagize for butting in on a discussion that I probalby have no bussiness getting in to.
I myself have yet to get my licence, but one day I hope to get it(when I get the time to study for it).

from what I've read of this discussion, it seems to me that the consern here as J Kelley said is
that it's not that people want to maintain the standard requirements to get in so much as it's
the standards of conduct. so wouldn't it be more appropreate to makee stricter policy on conduct.
that way the goals of the amateur service are maintained, and it will still filter out the "CB riff raff"
that you don't want.

once again, I appolagize for intruding(and for any spelling mistakes I made)

Hope to be able to talk to some of you on the air one of these days

Joseph M. Jones
jjones76@primary.net
prospective amateur operator

Hi all, can anyone help with the direct QSL info. for Endo JG2EBN, he
is not in the call book I have and also not in Buckmaster TIA.

or : f5nod@worldnet.fr

*** LYON DX GANG ***

D.I.F.O. : DIPLOME DES ILES FRANCAISES D'OUTREMER

French Overseas Islands Award

D.I.F.O. is sponsored by the LYON DX GANG. It has been created to encourage
and award Amateur Radio Stations around the world, to contact or activate
french overseas islands.
It may be claimed by all licensed amateurs and SWLs.

All contacts after January 1st 1980 are valid.

The award is issued in 3 divisions: MIXED, PHONE, CW.
All contacts must be made on authorised bands between 160 and 10m.

BASIC AWARD : 10 different french OVERSEAS islands.
ENDORSEMENTS will be given by groups of following 5 islands.
(e.g. 15-20-25-30...). Plaque Endorsements will be by group of 10 islands.

All contacts must be made from the same country.

QSL's must be in the applicant`s possession. Each request must be done with
a photocopy of each QSL cards. Originals may be requested in case of doubt !

Activators can count the islands as same as the chasers.

Applications for the award and endorsements should be sent to:

Award Manager
F5JJW, SUC Joel
La Grange
69440 Taluyers
FRANCE

The service charge for the BASIC AWARD is FF 60,- or $ 12,
(add 10 FF or $ 2 for return postage)
ENDORSEMENTS FF 20,- or $ 4 each.
(add 5 FF or $ 1 for return postage)
PLAQUE : The top honor roll level is awarded by a free plaque for qso's with
50 islands. BUT, you MUST have requested before each following
endorsements : 15-20-25-30-35-40-45.

The reference will depend of its DX country location, in a way to put the prefix at the beginning of each reference, followed by a serial number. (e.g. FO-001 CLIPPERTON island)
We consider valid any island surrounded by salt water outside Europe and belonging to France.

The award manager is the only one authorized to give new reference numbers and request must be made directly by the DX'peditioner.

To be valid an island must have :
- An official name.
- A french territory prefix where the island is located.
QSLs must clearly show the island name. If it is not the case, the island will be valid for the main island of the archipelago !

The award manager decision is final.

RULES MAY BE MODIFIED IN THE FUTURE IN A WAY TO IMPROVE THE INTEREST OF DIFO

172. JavaScript Beam Heading Calculator

JAVASCRIPT BEAM HEADING CALCULATOR
http://www.mailbag.com/users/hanelson/beamhead.htm

Hi Gang!

I've just posted a project I've been working on for the last few days in an effort to learn something about JavaScript-ing. I'd appreciate all critical appraisals, suggestions, and additions. Please give it a try. The database currently holds about 900 DX entries.

It seems to work fine with Netscape 4.04. I've not been able to test it with other browsers.

Please be sure "Java" AND "JavaScript" are ENABLEd in your browser

http://www.mailbag.com/users/hanelson/beamhead.htm

Thanks a bunch

Harv/KG9GA

173. FR0FLO/J 80 Mtr QSO, 1981

While transcribing some old log books into DXBase, I found an entry
for an 80 Meter QSO with FR0FLO/J (5 Sept 1981). I believe the
operator was Herik, FR5DX. Does anyone know his e-mail address
or a way to contact him to verify this old QSO, before I try the
s-mail route ??
Thanks, Dick, W1KSZ

Yes and no. They want you to behave, AND learn 20WPM. There is no room
for change. It doesn't matter that the FCC has created the no-code Tech
license, no-coders are non-hams in their opinions. Its just that way.
Forget about them.
Go get whatever license you can, and enjoy it.
73, Brian/N0iMD

Walt, when I first got on ten, I work an OM in Florida, and we exchanged numbers. I was in Nebraska at the time. I worked him again from Guam/KH2, and he said he already had my number. Later, I worked him again - from Illinois, and he sounded upset with me. I heard him on from Ohio, but I figured that I better leave him alone.

Hi,

Ham Log 3, the Ultimate Ham Radio Logging program, is currently available at the following FTP sites on the Internet. This is the latest functioning demonstration version of Ham Log, in its fifth year. The sites directory names have changed since the last upload, so please take note.

oak.oakland.edu - /pub3/hamradio/dos/logging
ham_log3.zip is the only file available

ftp.funet.fi - in directory /pub/ham/hf-log
ham_log3.zip and ham_log3.txt

If you haven't seen Ham Log 3, then do yourself a big favour and get your copy.

Ham Log is a professional program that has a enormous facilities and functions, yet very simple to use. Reviewed in The Canadian Amateur magazine:

"This is the first computer program I have used in years that I really cannot find anything to improve on. With so many features, it is beyond this reviewer's ability to do it full justice. I rank it [Ham Log] as one of the 'breakthroughs' in computer technology applied to this fine hobby, ranking with Baycom, JVFax and Hamcom."

The new version is also available in a "CB" version.

190. Liberty Net

Newsgroup: rec.radio.amateur.dx
Date: 1998-01-18 00:00:00 UTC
From: nunkhead@aol.com
Message-ID: <19980118212000.QAA12546@ladder02.news.aol.com>
Source record: 30601

I am very shocked to come read this group this mornig and find nothing new on the Liberty Net. Before last night I had never listened to the Liberty net. I
am a 22 male and I have a HAM radio lisc so I figured that I would tune in and see what was going on. I was shocked to find probally some of the same type of folks that helped me get my lisc acting like they where on the CB radio. It was too much. I remember my interest in radio started at CB. It was the first thing I could find. Then after seeing people yelling, swearing, keying up music, noise makers, etc. ripping others antenna's off anothers roof because someone said something that someone didn't like. SO I decided to head for HAM radio and have not been too active due to the huge price tag that comes with HF broadcasting. I have always seen and heard Hams acting rather nice on the air and being very helpful. What i heard last night just plain pissed me off!!!!!!!!! Im sorry but I have NO other way to describe it.

It started off by hearing that this was a net like any other net on HAM radio a bunch of guys LEGALLY checking in to a net. Nothing wrong with that. Ok the subject matter is a little off and not very P.C. "pol. correct" So be it this is America and everyone has their opinion. SO i find no fault in the content of the net at all. I hate P.C to a point as well. If the Net offends you DON"T LISTEN or contact the FCC. The only checked in member that I could find fault with was the homophob that was logging in as a narrow minded dim wit, who had very little grey matter. Matter of fact this same man "which I forgot to get his call, but he was from out in the east coast". This was the only member of the net that I could hear from my listening post that was swearing and threatening another man that was speaking his opinion of this fellow VIC. This guy was like one of the CBers that I listened to when I was 15 years old. He had the attitude of a CBer. The attitude of Im Big and Bad and I'll come and Find you if you Piss me OFF! I kept hearing some threats from the net members as to a certain man that was pissing this VIC fellow off by say "he got his info from God". They were saying how they were going to find where this man lives bla bla bla!!!!!!!!!!!! What a joke! I know that the man was speaking his mind and NOT cheacking into the NET! and YES this is ILLEGAL but under the circumstances of who he was talking to I don't blame him. I find it funny that some of these guys on the net are acting like a bunch of scary thugs on 3950! Im a 22 year old ham and I throw up 405 on bench for a triple with no problem and seeing a bunch of Hams coming to my door with their Fat guts hanging out, their antenna farm cars and an HT glued to one ear is NOT MY IDEA OF BEING SCARED! I suggest that all the people on 3950 shut up or put up! Why don't all of you JAMMERS AND NET MEMBERS MEET and see just how Big Bad and SCARY you all are. If not why not just shut up and stop acting like your on Channel 21 For Christ Sakes. It really is sad because as we speak the HAM Bands are being taking from us everyday. These bands are worth a fortune to the FCC and the private sector. If the FCC and listening Public see the Bands

being used like this it is no wonder why we are Losing the bands! The Hobby is dieing and this is one of the reasons why. Everyone has the FREEDOM TO SPEAK their mind BUT BE ORGANIZED AND ACT like adults not like children on a CB!

My Thoughts A Concerned Ham of the 90's

Thanks to the Northern Ohio Amateur Radio Society, Northern Ohio DX Association, Ohio/Penn PacketCluster Network, WB2RAJ/WB2YQH & The 59(9) DXReport, W5FKX, K7BV, K7WX, K9NW, N0TG, 9K2HN, F6AJA & LNDX, FR5DX, G4BUE & DX News Sheet, G4BWP, G4ZVJ, JA1ELY, LX1NO, OA4QV, PT2NP, UA2FZ, VE2EH, VE3BW, VK3RX and ZS6RVG for the following DX information.

3DA, SWAZILAND. The "DX News Sheet" reports Jon, 3DA0CA, is now active on 160 meters, 2100-2200z for OC and JA, and 0245z for EU and NA, on 1827 kHz QSX up 5. QSL via W4DR.

4X50, ISRAEL. Look for this special 4X50 prefix with a /SK suffix to be used until May 1st to celebrate Israel's 50th anniversary.

7P8, LESOTHO. Reminder to look for Dave/ZS6RVG, Dick/ZS6CAL and Mark/ZS6HZ to be active from here between 22nd and 26th of January. Look for them in the normal DX windows signing their homecall/7P8. They state that they will be working SSTV and RTTY as much as possible, but the SSB DXers will also get a chance. For more details, check OPDX.332.

8Q7AA DXPEDITION UPDATE. OPDX InterNet Subscribers will receive an additional bulletin containing the following message by Warren Hill, K7WX, called: "8Q7AA E-mail Feedback"

9G5, Ghana. Andy, G4ZVJ, will be active from here February 5th through March 1st, as 9G5VJ. Activity will be on all HF bands, mostly CW, including the ARRL DX CW Contest and possibly the WPX RTTY Contest. QSL via G4ZVJ (Direct or via Bureau). His direct address: Andy Chadwick, 5 Thorpe Chase, Ripon, North Yorkshire, HG4 1UA, U.K. Andy states that he will accept Bureau requests via the InterNet: andy@g4zvj.demon.co.uk Also, visit his website: http://www.g4zvj.demon.co.uk

AX, AUSTRALIA (Special Prefix). To celebrate "Australia Day" on January 26th, the Australian amateurs will be permitted to use the prefix "AX" instead of VK for the period January 24-26th. The use of the "AX" prefix is optional.

C4, CYPRUS. A group of UA2s operators will be active from 5B4-land during CQWW 160M CW Contest, January 23-25th. Look for UA2FB, UA2FF and UA2FZ as a Multi/Single entry using the callsign C42A. QSL via DK4VW CBA (maildrop only), SASE please, cards then will be forwarded to UA2-land.

CO2, CUBA. Look for Winston, CO2WF, on 40 meters (7050-7060 kHz) between 0200 and 0300z (SSB mode). He is also very active on 14151 or 21215 kHz between 1900 and 2100z. Also, he can sometimes be found on 12 and 17 meters, CW. QSL via VE2EH.

FS, SAINT MARTIN. Dennis, K7BV, will be operating from FS5PL's QTH in the ARRL International DX CW Contest (February 21-22nd). He will also operate a day or two before and after the contest as FS/K7BV, looking for contacts with JA's and others still needing FS. The FS/K7BV QSOs can be confirmed via his home callsign or the K7 bureau. The FS5PL QSL contacts will need to go to Lionel's QSL Manager N0JT. Dennis also mentions he will be operating the 8P9Z station in the July IARU Contest as 8P9**. All QSLs should be sent to his home callsign or the K7 bureau. His address is: Dennis Motschenbacher, 4357 Appollonio Way, Carson City, NV 89704 USA

FT5X, KERGUELEN ISLAND. It has been reported that Rene, FR5HR, now signing FT5X/FR5HR, will be active daily from Kerguelen Island on the following frequencies: 14240 kHz at 0200z (Good opening to the States!), 24950 kHz at 1300z and 18130 kHz at 1400z. Rene will stay on the Kerguelen until the end of February. He can't operate on CW! (He said no permission!). Meanwhile, Helios, FT5XN, has been active on 20 meters (14031 kHz) CW around 0330 and 0400z. QSL via F6PEN.

GB50, ENGLAND (Special Event/Prefix). During the month of June, the station GB50MKI will be active to celebrate the 50 years since the Mark 1 computer was programmed. It was designed in the Engineering Department of Manchester University. The station's HF operations is expected to be active on ALL band, although emphasis will be placed on data modes. Other modes will also be activated. Brief information may be obtained via the Web site: http://www.mcc.ac.uk/Radio/

GU, GUERNSEY. Jean Marc, F5SGI, will be active as GU/F5SGI from April 11-17th. He will be active mostly on CW from 40-10 meters. There will be activity on SSB on 14260 kHz. QSL direct or via the bureau.

HR6, HONDURAS. Joe, VE3BW, will be arriving here February 1st for three weeks. He will be active on all bands, including six meters. He will be active during the ARRL DX Contest, but his contest operation will be cut short due too his departure. QSL to his homecall.

IOTA NEWS.......
Marc, ON5FP, will be active as MW0/ON5FP from St. Tudwalls Islands (EU-106) during the IOTA contest.

The Kuwait Amateur Radio Society (KARS) announces that it will help support 9K2F to activate IOTA AS-118 in the Persian Gulf Group. This DXpedition will take place on February 12th, and will be on the air

for a week. QSL will be via 9K2HN.

KH0, MARIANA ISLANDS. Operators JN1TCC, JS1PNS, JA2HBK, JJ2NYT, JK2TQB and JR4URW will be traveling to Saipan Island and will be active February 14-16th. This will be the group's first ever overseas DX operation. They will use reciprocal callsign like KH0/homecall. Activities will be on 40-10 meters with operations on SSB, CW and RTTY. QSL via homecall.

NOIDXC DXER OF THE YEAR NOMINATIONS NEEDED. Don, W5FKX, President of NOIDXC, reports: "The seventh annual New Orleans International DX Convention will be held again this year at the Royal Sonesta Hotel in the French Quarter on August 14 and 15. Plans are already being finalized on a number of outstanding DX and technical presentations and we are looking forward to another memorable convention. Circle the dates on your calendar and make plans to join us in New Orleans this August. Beginning now, and continuing through the month of February, we are inviting nominations for DXer of the Year. Please send in your nominations on behalf of those who have significantly contributed to our enjoyment of DXing. Nominations for DXer of the Year can be mailed or e-mailed to: Stan Pulitzer, 4236 Vincennes Place, New Orleans, LA 70125 -or- w5jyk@aol.com....."

OA463, PERU (Special Event/Prefix). Cesar, OA4QV, informs OPDX that during the month of January he will be using the special callsign OA463QV to commemorate 463 years (or is it 63?) of the Foundation of Lima (18-01-1535). QSL via OA4QV CBA.

P4, ARUBA. Look for Mike, K4PI, to be active until January 27th, as P49I. His activity includes an entry in the CQ 160 Meter CW Contest. QSL via home call.

QSL INFO AND NEWS......
If you get a chance to work N0TG/VP5, WA4DAN/VP5, AA4VK/VP5 from Turks and Caicos Islands (active until January 23rd on all bands 160-6 meters CW and SSB) send for your "Great Full Color Photo QSL". ALL QSLs "DIRECT ONLY" via N0TG: Randy Rowe, 1094 Big Rock Loop, Los Alamos, NM 87544

PIRATE ALERT! Norby, LX1NO, reports that operations by LX1PS, LX0PAC, LX2AA and LX2BN are pirates. DO NOT QSL! Cards are being returned.

Last call for anyone still needing a QSL from Ron's previous operations of DL4FDU, EY8/NP2AQ, 4L0MR or EK9RM. He requests to E-mail your info, or send QSLs to the address: Ron Maples, U.S. Embassy Mexico City/ESO, Box 3087, Laredo, TX 78044-2087. His E-mail address is: rmaples@compuserve.com. He mentions that he hopes to be on the air from Mexico City by March for the next two years.

Mike, K9NW, reports the following QSL route change for all his DX operations (Effective 1/1/98). QSL the following to WW9DX (direct or bureau): PJ7/N0BSH, NP3/N0BSH, NP4/N0BSH, FS/N0BSH, V47NZ, FS/K9NW and WH7/K9NW. WW9DX is the Western Wisconsin DX Association. Their address is: PO Box 411, La Crosse, Wisconsin 54602. Mike states all

of his future operations will be QSL via WW9DX.

Ron, AC7DX, reports he is NOT (or AA6BB) the QSL Manager for the following stations: JY5IN, T32LN ZK2VE, VS6CT, VS6CT/KP2, BV/OH2BH, VR2BH and VR2EW. OPDX InterNet Subscribers will receive an updated list (as an additional bulletin) for all the stations that Ron handles cards for.

TL, CENTRAL AFRICAN REP. The 59(9) DXReport states Pascal, TL8PL, is still active despite an original January 1 QRT date. OPDX has done some searching and found Pascal was active this past Sunday on 40 meters (7022 kHz at 0515z). It is also reported that he likes the low end of 15 and 17 meters from 1200-1300z. QSL via F5LNA.

TROUBLE IN VANUATU. Alan, VK4AAR, reports to OPDX that a YJ station that he has been looking for several weeks (because he is manager) finally came on the air only for a few moments on January 12th (OPDX has decided not to mention the station's callsign, due to possible repercussions). With an unusually weak signal on 20m, the station said that there is big trouble in Vanuatu at the moment, and he has lowered his antennas (hence the poor signal) as a precaution. The situation is that there is a civil uprising. Alan asked him to stay a minute or two, and he refused saying "I must go QRT immediately!" He sounded quite disturbed, but said he was OK and had survived the big cyclone of recent days. Alan states he has a number of QSLs to reply for this station, but needs to check with him and his logs for the reports. Anyone who is currently still waiting for a reply at this time...please be patient and Alan will get them turned around as soon as possible.

XT, BURKINA FASO. "The 59(9) DXReport" states Mike, F5RLE, will be active on all bands, mostly CW January 22-March 9 as XT2DM.

XW30/XW30A FROM LAOS NOW QRT. This DXpedition received good news during the week in that the authorities in Vientiane had authorized a two day extension to the operation. The DXpedition went QRT on the 16th at midnight Laos time instead of the 14th. This gave many an extra chance to work the XW30/XW30A stations. If you did not work them, you will have another chance later in the year. The Laotians have invited the group back to operate in October. We are sure more details will be forthcoming.

ZX0, ABRA ANTARCTIC DXPEDITION. Paul, PT2NP (ABRA Director Secretary), informs OPDX that the ABRA-DX Brazilian Association will activate its fourth DXpedition, this time to the Antarctic region. From January 22nd to February 8th, operators Lunkes, PT2HF, and Paul, PT2NP, will be active from the Brazilian "Comandante Ferraz" Antarctic Base Station, located on King George Island (counts for DXCC South Shetland Is., IOTA AN-010, DIB-20). Their callsigns will be ZX0DX (SSB) and ZX0CW (CW). They may also use the "Comandante Ferraz" Antarctic Station's callsign ZX0ECF. Besides operating on SSB and CW, they intend to work on RTTY, as ZX0CW.
Suggested frequencies:
SSB - 3755, 7055, 14260, 18128, 21260, 24950, 28420
CW - 3530, 7025, 10140, 14040, 18098, 21040, 24920, 28040

WARC - Operations will depend on taking the proper antennas.
There is a chance of operations on 160m and 6m, if they
can take antennas and equipment for that.
The QSL manager will only be PT2GTI (OK in the Callbook). The cards can
be sent to him directly or via bureau. There may be operations from other
islands near Antarctic Peninsula.

One of your ilk should be interested in reading an article in the February '98 issue of World Radio titled " N8TI vs. Bad Hams". It addresses the issue you raise, which I would hope you're staying above. By the way I didn't catch the call or the name. Good luck and good DX. John(N8FFG)

IF you are referring to MY post saying that you did not catch the call or
the name, it's because you didn't read it. Read the post again. My call
and name automatically get sent with each post. :)

198. Saturday night incident

Newsgroup: rec.radio.amateur.dx
Date: 1998-01-19 00:00:00 UTC
From: desmith@telalink.net
Message-ID: <6a0dhp$blm@apple.telalink.net>
Source record: 30609

It has come to my attention an incident that happened Saturday night on 75 meters about 0000-0300z has caused a bit of a buzz...

Yes, it really was W9WI trying to work the NA QSO Party on 3794 in that time period. No, I wasn't working many of the stations trying to call me. Couldn't hear them, there were too many jammers.

Having gotten into amateur radio in Wisconsin where only the very best equipped stations work more than a handful of DX on 75 meters, I was honestly unaware of the extent of the "DX Window" on this band. I knew to stay away from 3795-3802, (and avoided several excellent opportunities to attempt to operate there) but didn't know it was necessary to stay below 3790.

I learned two principles at an early age: "Ask and you shall receive.", and "Give in to bullies, and you're asking to be bullied." If someone had politely (or at least civilly..) called, identified themselves, and asked me to QSY, I would have done so. In fact, the jammers got bored by about 0300, VE3POS *did* ID and politely ask me to QSY, and I *did* QSY. I have been jammed often enough elsewhere in 3800-3875 that I no longer react to unidentified jammers; it only encourages them to jam other operators.

Anyway, to those who weren't participating in the jamming & were unable to DX Saturday night, I sincerely apologize. It won't happen again; it has been made obvious to me that the average respectable amateur would rather I "turn the other cheek" and let the bullies have their way. To those bullies who were participating in the jamming, I owe no apology and none is forthcoming.

73 Doug

200. EX2M ?

Newsgroup: rec.radio.amateur.dx
Date: 1998-01-20 00:00:00 UTC
From: r.s.eckman@larc.nasa.gov
Message-ID: <slrn6c977o.2jp.r.s.eckman@eos1.larc.nasa.gov>
Source record: 30611

Yesterday, I worked a station on 15m signing EX2M. He was strong and running lots of north Americans. From his comments, this was actually operated by HH2HM/F. At the least, the QSL manager was given as HH2HM/F. The call rang a bell as there was a lot of question last year in the DX bulletins about some operations by HH2HM/F and his activities as a QSL manager. I recall that the DXCC desk did not allow some QSLs verified by him for DXCC credit (for a 5A1A operation and perhaps others).
There was also some discussion on the DX packetcluster yesterday about the reality of this operation. The signal was unusually strong to have come out of central Asia when conditions weren't very good overall on 15m. I note from info on the web that EX2M is a club station located in Bishkek. Does anyone have anything more definitive on whether yesterday's operation really came from this station?

Richard Eckman KO4MR

The thing I noticed is TOOO MANY COOKIES. Have your web designer read on how to implementate cookies 1 per event loaded i.e. for every gif loaded is too much. I almost quit because I had to hit cancel too many times (I do not allow cookies)

If you wish me to visit your site

that must be changed.

Hi Fetter -- there are two links to the 100 most wanted countries at
URL:
http://pw2.netcom.com/~ac6v/pagev.html#DX

One is from DJ2XS - a 1994 list

The other is from the So Calif DX Club -- a 1996 list.

Please give them proper credit if you quote them -- I only link the
sites.

Dick,

FR5DX (ex FR0FLO) is not easy to get a card from. I think I have two
cards from him including a /J 75 meter card and FR5DX on 40. Best bet
is to send to him at CB address and say nothing about Reunion Island
just the zip code and France. SEnd him a note and some green stuff
...

217. Elmer needed for 6 meters

Newsgroup: rec.radio.amateur.dx
Date: 1998-01-21 00:00:00 UTC
From: Stuart Underwood <stu@harborcom.net>
Message-ID: <34C62162.BCD7EE8C@harborcom.net>
Source record: 30628

Greetings,
I am looking for any and all the information I can get on six meter operating. I have purchased a FT690 and a three element beam. I also have a Diamond vertical. I want to enjoy the "Magic Band" everyone is talking about. My wife has just become an amateur radio operator, and is also looking forward in working the band. Is there any nets in Northeastern Ohio where we can check in, listen in and gather information. Are there any good books we can read about the band? Thanks in advance. 73, Stuart KB8VIY

219. 3B7 Bulletin Nr. 1

Newsgroup: rec.radio.amateur.dx
Date: 1998-01-21 00:00:00 UTC
From: K0HB@JUNO.COM
Message-ID: <885403298.1443102731@dejanews.com>
Source record: 30630

```
3B7 Bulletin Nr. 1
==================

(January 20, 1998)

DXpedition to St. Brandon (3B7)
>From May 5th until May 17 the archipelago St. Brandon will be active
in continuous operation with several stations.
```

What, where?
The destination of the DXpedition, the archipelago St. Brandon (or
Cargados Islands, 3B7) belonging to the Republic of Mauritius (3B8)
is situated about 400 km to the north of the latter. (QTH: 17°S 58°O)

```
Organisator:
Union of Swiss Short wave Amateurs (USKA), Section Zug, HB9RF;
Project initiator: HB9JAI, semag@swissonline.ch, HB9JAI@HB9EAS-8.CHE.EU

Participants:
3B8CF, 4X1DF/A, HB9ABO, HB9ADP, HB9AFH, HB9AFI, HB9AHL, HB9AJW, HB9BQI,
HB9BQW, HB9BXE, HB9JAI, K5KG

Schedule of the expedition:
April 24, 1998: Departure of the assessment team
May 2, 1998: Deaparture of the team from Zurich
May 6 to May 17: Operation at 3B7
May 18, 1998: Dismantling and return

Licence:
We have a written confirmation by the Mauritian authorities, saying
that a radio licence for St. Brandon will be granted.

Financing:
To assure the necessary funds we are left on the resources of the
DX community.
Expedition account:
Bank: Swiss Bank Corporation, Bundesplatz 1, CH-6300 Zug, Switzerland
Account numbers Q 824.996.0 CHF, Q 824.996.1 USD.
Remark: "Cargados-Expedition"
Cashier: Josef Meier, HB9AJW, 100450.540@compuserve.com
Thank you for your contribution!

Equipment:
4 Short wave stations with 1 kW PA and corresponding antennae.
VHF Station 6 m or 2 m 100 W for tests 3B7 - 3B8.
```

Operation:
24 hour operation on all bands according time of the day.
Operating modes: CW, SSB, RTTY and SSTV.

Logging:
The current state of the log will be daily transmitted onto our
web site via Inmarsat standard-M data mode.

WWW site:
A dedicated web site for the St. Brandon DXpedition is under construc-
tion. It should be operational by mid February 1998.
The link to this site can eventually be obtained from http://www.uska.ch
under "Links", "DXPedition"

221. [The Daily DX] Vol. 2 No. 13

Newsgroup: rec.radio.amateur.dx
Date: 1998-01-21 00:00:00 UTC
From: "Bernie McClenny, W3UR" <bernie.mcclenny@mail.wdn.com>
Message-ID: <34C6891B.52F5@mail.wdn.com>
Source record: 30632

```
. ======================
*** The Daily DX ***
======================
Volume 2 Number 13
January 21, 1998
Edited by Bernie McClenny, W3UR

----------------------------------------------------------------------

Headlines

----------------------------------------------------------------------
```

Gerry, W6TER, reports the following about the upcoming St. Brandon Island DXpedition that was mentioned in the 8 December issue of The Daily DX. The DXpedition will take place from 6 to 17 May on Cargados Island in the St. Brandon archipelago. The Union of Swiss Short wave Amateurs (USKA) club station HB9RF is organizing this DXpedition and is headed by Karl, HB9JAI. The group will leave Zurich on 2 May and hopes to start the operation on 6 May. A license has not been granted as of yet however the Mauritian authorities have given written permission. The group will consist of 3B8CF, 4X1DF/A, HB9ABO, HB9ADP, HB9AFH, HB9AFI, HB9AHL, HB9AJW, HB9BQI, HB9BQW, HB9BXE, HB9JAI and K5KG. Plans are to have 4 stations with amplifiers and antennas for all bands from 10 to 160 meters. Look for them to be active on CW, SSB, RTTY and SSTV. They will also be doing to testing on 2 and/or 6 meters between 3B7 and 3B8. With this many operators they will be on 24 hours a day throughout the DXpedition. The logs will be transmitted daily to a website via Inmarsat so stations working them will easily be able to check for their QSOs. The group is looking for financial assistance from the DX community. Those wishing to help out may do so by contacting Josef Meier, HB9AJW via e-mail at 100450.540@compuserve.com The DXpedition bank account information is:

Swiss Bank Corporation, Bundesplatz 1, CH-6300 Zug, Switzerland
Account numbers Q 824.996.0 CHF, Q 824.996.1 USD.
Remark: "Cargados-Expedition"
Cashier: Josef Meier, HB9AJW

More information to follow.

Erik Sjolund, SM0AGD, reports the XW DXpedition netted some 22,000 QSOs. When he got home yesterday he had plenty of cards waiting. Those who have not sent their QSLs may do so by sending them to Erik Sjolund, SM0AGD, Vestagatan 27, S-19556 Marsta, Sweden.

Hiro, JA1EZM, is once again active from Karachi, Pakistan as AP2AP. He hopes to get on in this weekends CQ World Wide CW 160 Meter DX contests. QSL via JA1EZM.

Due to some unforeseen reason the OH group going to Guatmala will not use the expected TG0OH callsign and activity will be limited. The group will now use TG7/OH3JF and expects to start late today. They will be concentrating on 30, 80 and 160 meters and RTTY.

Silent Key

Rusty Epps, W6OAT, reports the sad news of the passing of Eric Edberg, W6DU. Eric was a past President and Secretary for both the Northern California DX Foundation and the Northern California DX Club. He was a member of DXCC #1 Honor Roll and of the First Class CW Operators Club (FOC). Our condolences to the Edberg family.

QSN

1X5AA - CHECHNYA REPUBLIC - Hamza continues to be active most days on the bottom of the 40 meter CW band between 21:00 and 23:00Z. He is located in the city of Grozny.

3V8BB - TUNISIA - Was active on 14252 from 10:00 to 10:30Z and on 14194 from 11:40 to 13:00Z.

8Q7AA - MALDIVES - They have been very busy on the bands. At times they are running 3 radios all at the same time. Yesterdays reports were as follows:

GMT	Freq.	GMT	Freq.
00	3799/7047/10105	14	3789/10103/14005/21008
01	3798/7047/14010	15	3799/10103/18145
02	7047/14003	16	3789/10103
03	7047	17	1825/3789/10104
05	14195	18	3789/7005/10104
08	14195	19	7005/10104
09	18074/21295	20	7042/10104
10	18074/21295	21	1825/7042/10104
11	14195/18074	22	1825/3797/7042/10104
12	18145	23	1824/3797/7047/10104
13	3799/10103/14005		

9L1GA - SIERRA LEONE - Antonio was found on 14320 around 15:00Z.

CM2RY - CUBA - Japanese stations report this station was active on 21300 just before 23:00Z working them.

EL2CE - LIBERIA - Was on 14192 around 00:00Z working all
across the lower 48 states. QSL via WB2VFH.

ET3AA - ETHIOPIA - Both Europeans and Eastern US stations
were working this one on 21008 yesterday from before
13:00 to after 15:00Z.

FT5X/FR5HR - KERGUELEN - Rene had a good signal in to South
America around 03:00Z yesterday on 14243. Today he
was reported at 14240 around 02:00Z.

FT5XN - KERGUELEN - Helios continues to show up on 14031
around 03:00Z. Later he was found on 14139 working
Europeans on both SSB and CW from 15:40 to 17:30Z.

J39JX - GRENADA - Many JA's report working this station on
21280 around 23:10Z.

K9AW/KH2 - GUAM - Gary was working Europeans on 18079 around
10:00Z. QSL via WF5T.

N0TG/VP5 - TURKS & CAICOS - Will be looking for JA's on 160
meters until 23 January from 11:00 to 11:30Z. Look
for him on 1833 QSX up. If no activity on 160 look
for him to be on 3505. QSL via N0TG direct.

S79KMB - SEYCHELLES - Keith showed up out of the blue on a
net on 14226 around 19:00Z. QSL via KN2N.

ZD7KT - SAINT HELENA - Ken was found working stations from
Europe and the US around 19:20Z on 18127.

222. Re: Saturday night incident

Newsgroup: rec.radio.amateur.dx
Date: 1998-01-22 00:00:00 UTC
From: DXER <dxisnot@dx.nets>
Message-ID: <6a65ll$u5g$1@news.radiks.net>
Source record: 30633

WHAT A CROCK FOR AN EXCUSE! I was listening to you very early on. At least one amateur using a callsign politely informed you that you were operating in the middle of the DX window, but you indicated you already had set up shop there, so "tough luck guys!" . Also, I can't believe you could not hear "anyone" calling you above the jamming. If I could hear plenty of callsigns, why not you? It would have been better if you worked those stations instead of your incessant CQ's!

It's obvious to me that you KNEW you were in the middle of the DX window and would rather provoke a confrontation than QSY above 3800. You certainly succeeded in your goal. Too bad there isn't a way to throw guys like you along with the jammers out of the hobby...and we wonder why our frequencies are always in jeopardy...

Doug Smith wrote in message <6a0dhp$blm@apple.telalink.net>...
It has come to my attention an incident that happened Saturday night on 75 meters about 0000-0300z has caused a bit of a buzz...

Yes, it really was W9WI trying to work the NA QSO Party on 3794 in that time period. No, I wasn't working many of the stations trying to call me. Couldn't hear them, there were too many jammers.

Having gotten into amateur radio in Wisconsin where only the very best equipped stations work more than a handful of DX on 75 meters, I was honestly unaware of the extent of the "DX Window" on this band. I knew to stay away from 3795-3802, (and avoided several excellent opportunities to attempt to operate there) but didn't know it was necessary to stay below 3790.

I learned two principles at an early age: "Ask and you shall receive.", and "Give in to bullies, and you're asking to be bullied." If someone had politely (or at least civilly..) called, identified themselves, and asked me to QSY, I would have done so. In fact, the jammers got bored by about 0300, VE3POS *did* ID and politely ask me to QSY, and I *did* QSY. I have been jammed often enough elsewhere in 3800-3875 that I no longer react to unidentified jammers; it only encourages them to jam other operators.

Anyway, to those who weren't participating in the jamming & were unable to DX Saturday night, I sincerely apologize. It won't happen again; it has been made obvious to me that the average respectable amateur would rather I "turn the other cheek" and let the bullies have their way. To those bullies who were participating in the jamming, I owe no apology and none is forthcoming.

73 Doug

The following is an excerpt from ARRL Bulletin 8 (ARL008):

"Approved by the Board were rules changes for the DXCC program that had been recommended by the DXCC 2000 Committee. Under the new criteria, no countries currently on the DXCC list will be removed. In the future, countries will be referred to as entities. A political entity will be added to the DXCC list if it meets any one of three criteria: it is a UN member state, it has an ITU prefix block assigned, or it has a separate IARU member society. The new criteria also replace all DXCC measurements, including physical separation distances, with metric system figures roughly equivalent to the former distances. While the 57 entities on the deleted list will remain, no new countries will be added to the deleted list in the future. Deleted entities simply will be removed. In addition, the new rules specify a minimum ''island'' size of 100 meters measured in a straight line. The DXCC field checking program will remain in place. The effective date of the changes will be announced later this year. The DXCC 2000 Committee was discharged with the Board's thanks."

Here are the new DXCC Rules adopted by the Board of Directors during their January meeting last weekend. The implementation date is March 31, 1998.

Revision dated: 17 January, 1998
American Radio Relay League
DX Century Club Rules

INTRODUCTION

The DXCC List is based upon the principle espoused by Clinton B. DeSoto, W1CBD, in his landmark 1935 QST article, "How to Count Countries Worked, A New DX Scoring System." DeSoto's article discussed problems DXers had in determining how to count the DX they had worked. He presented the solution that has worked successfully for succeeding generations of DXers.

In DeSoto's words, "The basic rule is simple and direct: Each discrete geographical or political entity is considered to be a country." This rule has stood the test of time • from the original list published in 1937 to the ARRL DXCC List of today. For more than 60 years, the DXCC List has been the standard for DXers around the world.

DeSoto never intended that all DXCC "countries" would be countries in the traditional, or dictionary, meaning of the word. Rather, they are the distinct geographic and political Entities which DXers seek to contact. Individual achievement is measured by working and confirming the various Entities comprising the DXCC List. This is the essence of the DXCC program.

DXCC activity was interrupted by World War II. In 1947, the program started anew. Contacts were valid from November 15, 1945, the date US amateurs were authorized by the FCC to return to the air.

Over time, the criteria for the List have changed. However, Entities are not removed when changes are made. The List remains unchanged until an Entity no longer satisfies the criteria under which it was added. Thus, today's DXCC List does not fully conform with today's criteria. Changes are announced under DXCC Notes in QST.

SECTION I. BASIC RULES

1. The DX Century Club Award, with certificate and lapel pin (there is a nominal fee of $5 for the DXCC lapel pin) is available to Amateur Radio operators throughout the world (see #15 below for the DXCC Award Fee Schedule). ARRL membership is required for DXCC applicants in the US, its possessions, and Puerto Rico. ARRL membership is not required for foreign applicants. All DXCCs are endorsable (see Rule 5). There are 12 separate DXCC awards available, plus the DXCC Honor Roll:

a) Mixed (general type): Contacts may be made using any mode since November 15, 1945.
b) Phone: Contacts must be made using radiotelephone since November 15, 1945. Confirmations for cross-mode contacts for this award must be dated September 30, 1981, or earlier.

c) CW: Contacts must be made using CW since January 1, 1975. Confirmations for cross-mode contacts for this award must be dated September 30, 1981, or earlier.

d) RTTY: Contacts must be made using radioteletype since November 15, 1945. (Baudot, ASCII, AMTOR and packet count as RTTY.) Confirmations for cross-mode contacts for this award must be dated September 30, 1981, or earlier.

e) 160 Meter: Contacts must be made on 160 meters since November 15, 1945.

f) 80 Meter: Contacts must be made on 80 meters since November 15, 1945.

g) 40 Meter: Contacts must be made on 40 meters since November 15, 1945.

h) 10 Meter: Contacts must be made on 10 meters since November 15, 1945.

i) 6 Meter: Contacts must be made on 6 meters since November 15, 1945.

j) 2 Meter: Contacts must be made on 2 meters since November 15, 1945.

k) Satellite: Contacts must be made using satellites since March 1, 1965. Confirmations must indicate satellite QSO.

l) Five-Band DXCC (5BDXCC): The 5BDXCC certificate is available for working and confirming 100 current DXCC countries (deleted countries don't count for this award) on each of the following five bands: 80, 40, 20, 15, and 10 Meters. Contacts are valid from November 15, 1945.
The 5BDXCC is endorsable for these additional bands: 160, 17, 12, 6, and 2 Meters. 5BDXCC qualifiers are eligible for an individually engraved plaque (at a charge of $30.00 US plus shipping).

m) Honor Roll: Attaining the DXCC Honor Roll represents the pinnacle of DX achievement:

i) Mixed--To qualify, you must have a total confirmed country count that places you among the numerical top ten DXCC countries total on the current DXCC Countries List (example: if there are 329 current DXCC countries, you must have at least 320 countries confirmed).

ii) Phone--same as Mixed.

iii) CW--same as Mixed.

iv) RTTY--same as Mixed.

To establish the number of DXCC country credits needed to qualify for the Honor Roll, the maximum possible number of current countries available for credit is published monthly in QST. First-time Honor Roll members are recognized monthly in QST. Complete Honor Roll standings are published annually in QST, usually in the July issue. See DXCC notes in QST for specific information on qualifying for this Honor Roll standings list. Once recognized on this list or in a subsequent monthly update of new members, you retain your Honor Roll standing until the next standings list is published. In addition, Honor Roll members are recognized in the DXCC Annual List for those who have been listed in the previous Honor Roll listings or have gained Honor Roll status in a subsequent monthly listing. Honor Roll qualifiers receive an Honor Roll endorsement sticker for their DXCC certificate and are eligible for an Honor Roll lapel pin ($5) and an Honor Roll plaque ($30 plus shipping). Write the DXCC Desk for details or check out the Century Club Item Order Form at
http://www.arrl.org/awards/dxcc/

v) #1 Honor Roll: To qualify for a Mixed, Phone, CW or RTTY Number One plaque, you must have worked every country on the current DXCC Countries List. Write the DXCC Desk for details. #1 Honor Roll qualifiers receive a #1 Honor Roll endorsement sticker for their DXCC certificate and are eligible for a #1 Honor Roll lapel pin ($5) and a #1 Honor Roll plaque ($50 plus shipping).

2. Written proof (i.e., QSL cards) of two-way communication (contacts) must be submitted directly to ARRL Headquarters for all DXCC credits claimed.

Photocopies and electronically transmitted confirmations (including, but not limited to fax, telex and telegram) are not currently acceptable for DXCC purposes. Staff may accept electronic confirmations when procedures to do so are adopted.
The use of a current official DXCC application form or an approved facsimile (for example, exactly reproduced by a computer program) is required. Such forms must include provision for listing callsign, date, band, mode, and DXCC country name. Complete application materials are available from ARRL Headquarters. Confirmations for a total of 100 or more different DXCC Credits must be included with your first application.
Cards contained in the original received envelopes or in albums will be returned at applicant's expense without processing.
By action of the ARRL Board of Directors, 10-MHz confirmations may be credited to Mixed, CW and RTTY awards only.

3. The ARRL DXCC List is based on the DXCC List Criteria.

4. Confirmation data for two-way communications must include the call signs of both stations, the Entity name as shown in the DXCC List, mode, and date, time and band. Except as permitted in Rule 1, cross mode contacts are not permitted for DXCC credits. Confirmations not containing all required information may be rejected.

5. Endorsement stickers for affixing to certificates or pins will be awarded as additional DXCC credits are granted. For the Mixed, Phone, CW, RTTY, 80, 40, and 10-Meter DXCC, stickers are provided in exact multiples of 50, i.e. 150, 200, etc. between 100 and 250 DXCC credits, in multiples of 25 between 250 and 300, and in multiples of 5 above 300 DXCC credits. For 160-Meter, 6-Meter, 2-Meter and Satellite DXCC, the stickers are issued in exact multiples of 25 starting at 100 and multiples of 10 above 200, and in multiples of 5 between 250 and 300. Confirmations for DXCC credit may be submitted in any increment, but stickers and listings are providing only after a new level has been attained.

6. All contacts must be made with amateur stations working in the authorized amateur bands or with other stations licensed or authorized to work amateurs. Contacts made through "repeater" devices or any other power relay methods (other than satellites for Satellite DXCC) are invalid for DXCC credit.

7. Any Amateur Radio operation should take place only with the complete approval and understanding of appropriate administration officials. In countries where amateurs are licensed in the normal manner, credit may be claimed only for stations using regular government-assigned call signs or portable call signs where reciprocal agreements exist or the host government has so authorized portable operation. Without documentation supporting the operation of an amateur station, credit will not be allowed for contacts with such stations in any country that has temporarily or permanently closed down Amateur Radio operations by special government edict or policy where amateur licenses were formerly issued in the normal manner. In any case, credit will be given for contacts where adequate evidence of authorization by appropriate authorities exits, notwithstanding

any such previous or subsequent edict or policy.

8. All stations contacted must be "land stations." Contacts with ships and boats, anchored or underway, and airborne aircraft, cannot be counted. For the purpose of this award, remote control operating points must also be land based. Exception: Permanently docked exhibition ships, such as the Queen Mary and other historic ships will be considered land based.

9. All stations must be contacted from the same DXCC Entity. The location of any station shall be defined as the location of the transmitter. For the purposes of this award, remote operating points must be located within the same DXCC Entity as the transmitter.

10. All contacts must be made using callsigns issued to the same station licensee. Operation by an operator other than the licensee must be in accordance with the regulations governing the license grant. You may combine confirmations from several call signs held for credit to one DXCC award, as long as the provisions of Rule 9 are met. Contacts made from club stations using a club callsign may not be used for credit to an individual's DXCC.

11. All confirmations must be submitted exactly as received by the applicant. The submission of altered, forged, or otherwise invalid confirmations for DXCC credit may result in disqualification of the applicant. Any holder of a DXCC award who knowingly submits altered, forged or otherwise invalid confirmations will forfeit the right to continued DXCC membership. The ARRL Awards Committee shall rule in these matters. The Awards Committee shall also determine the future eligibility of any DXCC applicant who has ever been barred from DXCC.

12. Conduct:
Exemplary conduct is expected of all amateur radio operators participating in the DXCC program. Evidence of intentionally disruptive operating practices or inappropriate ethical conduct in any aspect of DXCC participation may lead to disqualification from all participation in the program by action of the ARRL Awards Committee.
Actions that may lead to disqualification include, but are not limited to:

a) The submission of forged or altered confirmations.

b) The presentation of forged or altered documents in support of an operation.

c) Participation in activities that create an unfavorable impression of amateur radio with government authorities. Such activities include malicious attempts to cause disruption or disaccreditation of an operation.

d) Blatant inequities in confirmation (QSL) procedures. Continued refusal to issue QSLs under certain circumstances may lead to disqualification. Complaints relating to monetary issues involved in QSLing will generally not be considered, however.

13. Each DXCC applicant, by applying, or submitting documentation, stipulates to:

a) Having observed all pertinent governmental regulations for Amateur Radio in the country or countries concerned.

b) Having observed all DXCC rules.

c) Being bound by the DXCC rules.

d) Being bound by the decisions of the ARRL Awards Committee.

14. All DXCC applications (for both new awards and endorsements) must include sufficient funds to cover the cost of returning all confirmations (QSL cards) via the method selected. Funds must be in US dollars using US currency, check or money order made payable to the ARRL, or International Reply Coupons (IRCs). Address all correspondence and inquiries relating to the various DXCC awards and all applications to: ARRL Headquarters, DXCC Desk, 225 Main St., Newington, CT 06111, USA.

15. Fees.

Effective October 1, 1990, all amateurs applying for their very first DXCC Award will be charged a one-time registration fee of $10.00. This same fee applies to both ARRL members and foreign non-members, and both will receive one DXCC certificate and a DXCC pin. Applicants must provide funds for postage charges for QSL return.

a) A $10.00 shipping and handling fee will be charged for each additional DXCC certificate issued, whether new or replacement. A DXCC pin will be included with each certificate.

b) Endorsements and new applications may be presented in person at ARRL HQ, and at certain ARRL conventions. When presented in this manner, such applications shall be limited to 120 QSOs maximum, and a $5.00 handling charge will apply, in addition to other applicable fees.

c) Each ARRL member will be charged $10.00 for the first submission of the year, up to 120 QSOs and return postage.

d) A $0.15 fee will be charged for each QSO credited beyond the limits described in 15. b), 15. c), and 15. f).

e) Foreign non-ARRL members will be charged a $20.00 DXCC Award fee for their first yearly submission, in addition to return postage charges. Fees in 15. a), 15. b), and 15. d), and 15. f) also apply.

f) DXCC participants who wish to submit more than once per calendar year will be charged a DXCC fee for each additional submission made during the remainder of the calendar year. These fees are dependent upon membership status: ARRL Members: $20.00 (for the first 100 QSOs) Foreign non-members: $30.00 (for the first 100 QSOs). Additionally, return postage must be provided by applicant, and charges from 15. a), 15. b) and 15. d) also.

16. The ARRL DX Advisory Committee (DXAC) requests your comments and suggestions for improving DXCC. Address correspondence, including

petitions for new listing consideration, to ARRL Headquarters, DXAC, 225 Main St., Newington, CT 06111, USA. The DXAC may be contacted by e-mail to dxac@arrl.org. Note that this address is valid for the DXAC only. Correspondence on routine DXCC matters should be addressed to the DXCC Desk, or by e-mail to dxcc@arrl.org.

SECTION II. DXCC LIST CRITERIA

Introduction:

The ARRL DXCC List is the result of progressive changes in DXing since 1945. Each Entity on the DXCC List contains some definable political or geographical distinctiveness. While the general policy for qualifying Entities for the DXCC List has remained the same, there has been gradual evolution in the specific details of criteria which are used to test Entities for their qualifications. The full DXCC List does not conform completely with current criteria, for some of the listings were recognized from pre-WWII or were accredited with earlier versions of the criteria. In order to maintain continuity with the past, as well as to maintain a robust DXCC List, all Entities on the List at the time the 1998 revision became effective were retained.

Definitions:

Certain terms occur frequently in the DXCC criteria and are listed here. Not all of the definitions given are used directly in the criteria, but are listed in anticipation of their future use.

Entity: A listing on the DXCC List; a counter for DXCC awards. Previously denoted a DXCC "Country."

Event: An historical occurrence, such as date of admission to UN, ITU, or IARU, that may be used in determining listing status.

Event Date: The date an Event occurs. This is the Start Date of all Event Entities.

Event Entity: An Entity created as the result of the occurrence of an Event.

Discovery Entity: An Entity "Discovered" after the listing is complete. This applies only to Geographic Entities, and may occur after a future rule change, or after an Event has changed its status.

Discovery Date: Date of the rule change or Event which prompts addition of the Entity. This is the Start Date for a Discovery Entity.

Original Listing: An Entity which was on the DXCC List at the time of inception.

Start Date: The date after which confirmed two-way contact credits may be counted for DXCC awards.

Add Date: The date when the Entity will be added to the List, and cards will be accepted. This date is for administrative purposes only, and will

occur after the Start Date.

Island: A naturally formed area of land surrounded by water, the surface of which is above water at high tide. For the purposes of this award, it must consist of connected land, of which at least two surface points must be separated from each other by not less than 100 meters measured in a straight line from point to point. All of the connected land must be above the high tide mark, as demonstrated on a chart of sufficient scale. For the purposes of this award, any island, reef, or rocks of less than this size shall not be considered in the application of the water separation criteria described in Part 2 of the criteria.

Criteria:

Additions to the DXCC List may be made from time to time as world conditions dictate. Entities may also be removed from the List as a result of political or geographic change. Entities removed from the List may be returned to the List in the future, should they requalify under this criteria. However, an Entity requalified does so as a totally new Entity, not as a reinstated old one.

For inclusion in the DXCC List, conditions as set out below must be met. Listing is not contingent upon whether operation has occurred or will occur, but only upon the qualifications of the Entity.

There are five parts to the criteria, as follows:

1. Political Entities
2. Geographical Entities
3. Special Areas
4. Ineligible Areas
5. Removal Criteria

1. Political Entities:

Political Entities are those areas which are separated by reason of government or political division. They generally contain an indigenous population which is not predominantly composed of military or scientific personnel.

An Entity will be added to the DXCC List as a Political Entity if it meets any one of the following three criteria:

a) The entity is a UN Member State.

b) The entity has been assigned a callsign prefix bloc by the ITU . A provisional prefix bloc assignment may be made by the Secretary General of ITU. Should such provisional assignments not be ratified later by the full ITU, the Entity will be removed from the DXCC List.

c) The Entity has a separate IARU Member Society.

New Entities satisfying any one or more of the three conditions above will be added to the DXCC List by administrative action as of their "Event

Date."

Entities qualifying under this section will be referred to as the "Parent" when considering separation under the section "Geographical Separation." Only Entities in this group will be acceptable as a Parent for separation purposes.

2. Geographic Separation Entity:

A Geographic Separation Entity may result when a single Political Entity is physically separated into two or more parts. The part of such a Political Entity that contains the capital city is considered the Parent for tests under these criteria. One or more of the remaining parts resulting from the separation may then qualify for separate status as a DXCC Entity if they satisfy paragraph a) or b) of the Geographic Separation Criteria, as follows.

a) Land Areas:

A new Entity results when part of a DXCC Entity is separated from its Parent by 100 kilometers or more of land of another DXCC Entity. Inland waters may be included in the measurement. The test for separation into two areas requires that a line drawn along a great circle in any direction from any part of the proposed Entity must not touch the Parent before crossing 100 kilometers of the intervening DXCC Entity.

b) Island Areas:

A new Entity results in the case of an island under the following conditions:

i) The island is separated from its Parent by 350 kilometers or more. Measurement of islands in a group begins with measurement from the island containing the capital city. Only one Entity of this type may be attached to any Parent.

ii) The island is separated from its Parent by 350 kilometers or more, and from any other island attached to that Parent in the same or a different island group by 800 kilometers or more.

iii) The island is separated from its Parent by intervening land or islands that are part of another DXCC Entity, such that a line drawn along a great circle in any direction from any part of the island does not touch the Parent before touching the intervening DXCC Entity. There is no minimum separation distance under this section.

3. Special Areas:

The Special Areas listed here may not be divided into additional Entities under the DXCC Rules. None of these constitute a Parent Entity, and none creates a precedent for the addition of similar or additional Entities.

a) The International Telecommunications Union in Geneva (4U1ITU) shall, because of its significance to world telecommunications, be considered as a

Special Entity. No additional UN locations will be considered under this ruling.

b) The Antarctic Treaty, signed on 1 December 1959 and entered into force on 23 June 1961, establishes the legal framework for the management of Antarctica. The treaty covers, as stated in Article 6, all land and ice shelves below 60 degrees South. This area is known as the Antarctic Treaty Zone. Article 4 establishes that parties to the treaty will not recognize, dispute, or establish territorial claims and that they will assert no new claims while the treaty is in force. Under Article 10, the treaty States will discourage activities by any country in Antarctica that are contrary to the terms of the treaty. In view of these Treaty provisions, no new Entities below 60 degrees South will be added to the DXCC List as long as the Treaty remains in force.

c) The Spratly Islands, due to the nature of conflicting claims, and without recognizing or refuting any claim, is recognized as a Special Entity. Operations from this area will be accepted with the necessary permissions issued by an occupying Entity. Operations without such permissions, such as with a self-assigned (e.g., 1S) callsign, will not be recognized for DXCC credit.

d) Control of Western Sahara (S0) is currently at issue between Morocco and the indigenous population. The UN has stationed a peacekeeping force there. Until the sovereignty issue is settled, only operations licensed by the RASD shall count for DXCC purposes.

e) Entities on the 1997 DXCC List that do not qualify under the current criteria remain as long as they retain the status under which they were originally added. A change in that status will result in a review in accordance with Rule 5 of this Section.

4. Ineligible Areas:

a) Areas having the following characteristics are not eligible for inclusion on the DXCC List, and are considered as part of the host Entity for DXCC purposes:

i) Any extraterritorial legal Entity of any nature including, but not limited to, embassies, consulates, monuments, offices of the United Nations agencies or related organizations, other inter-governmental organizations or diplomatic missions;

ii) Any area with limited sovereignty or ceremonial status, such as monuments, indigenous areas, reservations, and homelands.

iii) Any area classified as a Demilitarized Zone, Neutral Zone or Buffer Zone.

b) Any area which is unclaimed or not owned by any recognized government is not eligible for inclusion on the DXCC List and will not count for DXCC purposes.

5. Removal Criteria:

a) An Entity may be removed from the List if it no longer satisfies the criteria under which it was added. However, if the Entity continues to meet one or more currently existing rules, it will remain on the List.

b) An Entity may be removed from the List if it was added to the List:
i) Based on a factual error (Examples of factual errors include inaccurate measurements, or observations from incomplete, inaccurate or outdated charts or maps); and
ii) The error was made less than five years earlier than its proposed removal date.

c) A change in the DXCC Criteria shall not affect the status of any Entity on the DXCC List at the time of the change. In other words, criteria changes will not be applied retroactively to Entities on the List.

SECTION III. ACCREDITATION CRITERIA

1. Each nation of the world manages its telecommunications affairs differently. Therefore, a rigid, universal accreditation procedure cannot be applied in all situations. During more than 50 years of DXCC administration, basic standards have evolved in establishing the legitimacy of an operation.
It is the purpose of this section to establish guidelines that will assure that DXCC credit is given only for contacts with operations that are conducted with proper licensing and have established a legitimate physical presence within the Entity to be credited. Any operation that satisfies these conditions (in addition to the applicable elements of SECTION I., Rules 6, 7, 8, and 9) will be accredited. It is the intent of the DXCC administration to be guided by the actions of sovereign nations when considering the accreditation of amateur radio operation within their jurisdiction. DXCC will be reasonably flexible in reviewing licensing documentation. Conversely, findings by a host government indicating non-compliance with their amateur radio regulations may cause denial or revocation of accreditation.

2. The following points should be of particular interest to those seeking accreditation for a DX operation:

a) The vast majority of operations are accredited routinely without a requirement for the submission of authenticating documentation. However, all such documents should be retained by the operator in the unlikely event of a protest.

b) In countries where Amateur Radio operation has not been permitted or has been
suspended or where some reluctance to authorize amateur stations has been noted, authenticating documents may be required before accrediting an operation.

c) Special permission may be required from a governmental agency or private party before entering certain DXCC Entities for the purpose of conducting amateur radio operations even though the Entity is part of a country with no amateur radio restrictions. Examples of such Entities are Desecheo I. (KP5); Palmyra I. (KH5); and Glorioso Islands (FR/G).

3) For those cases where supporting documentation is required, the following can be used as a guide to identify those documents necessary for accreditation.

a) Photocopy of license or operating authorization.

b) Photocopy of passport entry and exit stamps.

c) For islands, a landing permit and a signed statement of the transporting ship's, boat's, or aircraft's captain, showing all pertinent data, such as date, place of landing, etc.

d) For locations where special permission is known to be required to gain access, evidence of this permission must be presented.

4) These accreditation requirements are intended to preserve the integrity of the DXCC program and to ensure that the program does not encourage amateurs to "bend the rules" in their enthusiasm, possibly jeopardizing the future development of Amateur Radio. Every effort will be made to apply these criteria uniformly and to make a determination consistent with these objectives.

SECTION IV. FIELD CHECKING OF QSL CARDS

QSL cards for new DXCC awards and endorsements may be checked by two DXCC Field Representatives. This program applies to any DXCC award for an individual or station. Specifically excluded from this program are 6-meter, 2-meter, Satellite DXCC and all 160-meter QSLs.

1) Countries Eligible for Field Checking:

a) Eligible countries will be indicated in the ARRL DXCC Countries List, and are subject to change. Only cards from these eligible countries may be checked by DXCC Field Representatives. QSLs for other DXCC countries must be submitted directly to ARRL Headquarters.

b) The ARRL Awards Committee determines which countries are eligible for Field Checking.

2) DXCC Field Representatives:

a) DXCC Field Representatives must be ARRL members who have a DXCC award endorsed for at least 300 countries.

b) To become a DXCC Field Representative, a person must be nominated by a DX club. (A DX club is an ARRL affiliated club with at least 25 members who are DXCC members and which has, as its primary interest, DX. If there are any questions regarding the validity of a DX club, the issue shall be determined by the Division Director where the DX club is located.) A person does not have to be a member to be nominated by a DX club.

c) DXCC Field Representatives are approved by the Director of the ARRL Division in which they reside and appointed by the President of the ARRL.

d) DXCC Field Representative appointments must be renewed annually.

3) Card Checking Process:

a) Only cards from the list of eligible countries can be checked by DXCC Field Representatives. An application for a new award shall contain a minimum of 100 QSL confirmations from the list and shall not contain any QSLs from countries that are not on the list of eligible countries. Additional cards should not be sent to HQ with field checked applications. The application may contain the maximum number of countries that appear on the list of eligible countries. That is, if there are 245 countries on the list, field-checked applications could contain 245 countries.

b) It is the applicant's responsibility to get cards to and from the DXCC Field Representatives.

c) Field Representatives may, at their own discretion, handle members' cards by mail.

d) The ARRL is not responsible for cards handled by DXCC Field Representatives and will not honor any claims.

e) The QSL cards must be checked by two DXCC Field Representatives.

f) The applicant and both DXCC Field Representatives must sign the application form. (See Section I no. 11 regarding altered, forged or otherwise invalid confirmations.)

g) The applicant shall provide a stamped no. 10 envelope (business size) addressed to ARRL HQ to the DXCC Field Representatives. The applicant shall also provide the applicable fees (check or money order payable to ARRL-no cash).

h) The DXCC Field Representatives will forward completed applications and appropriate fee(s) to ARRL HQ.

4) ARRL HQ involvement in the card checking process:

a) ARRL HQ staff will receive field-checked applications, enter application data into DXCC records and issue DXCC credits and awards as appropriate.

b) ARRL HQ staff will perform random audits of applications. Applicants or members may be requested to forward cards to HQ for checking before or after credit is issued.

c) The applicant and both DXCC Field Representatives will be advised of any errors or discrepancies encountered by ARRL staff.

d) ARRL HQ staff provides instructions and guidelines to DXCC Field Representatives.

5) Applicants and DXCC members may send cards to ARRL Headquarters at any time for review or recheck if the individual feels that an incorrect determination has been made.

Wayne, its not saga, its Sega. Sega is a video game. You can rent the cartridges at Block Buster Video. They're not interested in beep beep beep when they can play Sega. If you had Sega when you were 13, you wouldn't be a ham today.

Are we sure young people won't enjoy code? I started at an age of 13 because code was fun. Maybe code should be advertised to the young as one of the "fun" aspects of the hobby.

Just a different twist to the saga.....

I take note that today is the 42 nd anniversary of my ham career. I started as KN0DON in 1956 and did so because I particularly enjoyed CW. My elmers, W0DSP and K0AVW, may they rest in peace, encouraged me to operate, any mode, any way. Just enjoy!

To date, of my 35879 QSO's, 19046 have been CW. I was 14 years old then and gess I just didn't know any better.

I agree, Wayne, and it would be a lot more fun if it were not stuffed down their throats by a bunch of megalomaniacs, i.e. "don't let the door hit you on the way out." I learned Morse code at the ripe old age of ten years so I could secretely communicate with my cousin next door. It was fun. Nobody forced me to do it. I still enjoy it.

There is nothing rong with CW if you dont like it, ok but if you want
a ham ticket bad enough you will study code and pass the test.

Its like every thing in life nothing is free and work a little to better
your self.

I never liked them much either, but most kids do. As far as being a big
waste of time, the same could be said of other hobbies (ahem).
But when it absolutely, positively has to be blown up with precision
guided munitions, I'll defer to the kid that grew up with the Sega.

I don't know that tapeworms could do it, but it is Pavlovian conditioning.
If you've ever attempted to condition a flatworm or dog, however, you
know it isn't easy. And the higher the intelligence of the subject, the
harder it becomes. Conditioning requires *unthinking* response.

> So what say let's get off this no-code nonsense and get on with

>average Pavlovian dog's tapeworm, now do you?

Actually, it would be the converse. Those smarter than Pavlov's dog's
tapeworm might have real difficulty. Of course those of you who simply
can't think at all have a real advantage.

246. DXpedition Announcements Mailing List

Newsgroup: rec.radio.amateur.dx
Date: 1998-01-25 00:00:00 UTC
From: Lyndon Nerenberg <lyndon@ve7tcp.ampr.org>
Message-ID: <01bd2aa0$c14e25a0$81116c18@default.v-wave.com>
Source record: 30657
Body handling: Binary attachment payload not displayed: dxp.txt

A new mailing list has been created for announcing upcoming DXpeditions.
The list was created after several DX bulletin editors made requests on the
DX mailing list to be included specifically in any expedition
announcements. Rather than burden the expedition organizers with having to
keep track of all their e-mail addresses we decided to set up a dedicated
list that the bulletin editors could subscribe to for this information.

Messages sent to the announcements list, in addition to being forwarded to
the announcement list subscribers, are also forwarded to the Internet DX
Mailing List, and will be archived on a seperate DXpeditions web page
(located at http://ve7tcp.ampr.org/DX/Expeditions/).

Attached is the original list creation announcement. It contains details on
how to subscribe.

SB DX @ WW $OPDX.341
Ohio/Penn DX Bulletin No. 341

The Ohio/Penn Dx PacketCluster
DX Bulletin No. 341
BID: $OPDX.341
January 26, 1998
Editor Tedd Mirgliotta, KB8NW
Provided by BARF-80 BBS Cleveland, Ohio
Online at 440-237-8208 28.8k-1200 Baud 8/N/1 (New Area Code!)

Thanks to the Northern Ohio Amateur Radio Society, Northern Ohio DX Association, Ohio/Penn PacketCluster Network, WB2RAJ/WB2YQH & The 59(9) DXReport, K2WE, KA2AEV, WB2CJL, K3DI, K3ZO, W4WX, WA4JQS, N5PG, K8BK, N8BJQ, N0ZOH, AH0W/OH2LVG, G3VMW, G4BUE & DX News Sheet, G4BWP, HB9ABO, HB9CYN, JA1IST/DL6FDB, OH2BU/OH7RF and PA3GBQ for the following DX information.

3B7, ST. BRANDON. A large group of operators will activate this rare location from May 6-17th. Several stations will be on the air 24 hours a day on all bands operating on CW, SSB, RTTY and SSTV. Operators and participants are: 3B8CF, 4X1DF/A, HB9ABO, HB9ADP, HB9AFH, HB9AFI, HB9AHL, HB9AJW, HB9BQI, HB9BQW, HB9BXE, HB9JAI and K5KG. The organizators are the Union of Swiss Short Wave Amateurs (USKA), Section Zug, HB9RF; and Project initiator HB9JAI. They have a written confirmation by the Mauritian authorities saying that a radio licence for St. Brandon will be granted. To assure the necessary funds for their DXpedition, they are asking for help from the DX community. To help, contact Josef Meier, HB9AJW, E-mail address: 100450.540@compuserve.com. A dedicated Web site for the St. Brandon DXpedition is under construction. It should be operational by mid February, 1998. The link to this site can eventually be obtained from http://www.uska.ch (under "Links", "DXPedition").

3B9, RODRIGUEZ ISLAND. The "DX News Sheet" states that the Midway-Kure DX Foundation (MKDXF) is planning a spring DXpedition.

3C0, PAGALU ISLAND. Rumor has it that a group of possibly four to six operators will be active from here beginning sometime in March. Activity will be on CW/SSB/RTTY, all bands, with an emphasis on 160, 80 and 40 meters.

8P9, BARBADOS. Steve, K2WE, will be here February 17-24th and active as 8P9AP. He will be staying on the south shore of the island in a place called St. Lawrence Gap. He plans to be active in the ARRL CW DX Contest and will be operational on all bands. QSL via homecall (ex-NI2C).

9G, GHANA (UPDATE). G3VMW, G3XAQ, G3ZEM and G4ZVJ will be active from Accra in Ghana during the month of February, 1998. Andy, G4ZVJ, will be active from February 5th through March 1st as 9G5VJ, and will be active in the FOC Marathon. He will be joined on February 12th by Alan, G3XAQ, who will be active as 9G5XA until February 23rd. Steve/G3VMW and Bob/ G3ZEM fly to Accra on February 20th to join the others and will be active as 9G5SW and 9G5ZM on all bands. They will be active during the ARRL CW Contest and the the RSGB 7 MHz CW Contest. Activity will be mainly on CW but with the possibility of some RTTY and SSB if required. QSL routes: 9G5SW via G3VMW or RSGB Bureau, 9G5VJ via G4ZVJ or RSGB Bureau, 9G5XA via G3XAQ or RSGB Bureau and 9G5ZM via G3ZEM or RSGB Bureau.

9G, GHANA (Another ham in Ghana!). Steve, PA3GBQ, reports to OPDX that he will be traveling to Ghana in the first 3 weeks of February, 1998. He explanins that this is not a DXxpedition but maybe he will find some time and equipment to operate on the ham bands. He will be traveling throughout the country. His probable callsign may be 9G5BQ. QSL via PA3GBQ (1998 CBA) or bureau.

D6, COMOROS ISLANDS. Start looking for Martin, HB9CYN, and Chris, HB9CYV, to be active as D68YN and D68YV, respectively, until Febraury 6th. Their activity will be on 160-10 meters all bands, mainly on CW but with some SSB. They will also be on RS-12/13 satellites. SORRY NO RTTY. QSL routes are: D68YN to HB9CYN and D68YV to HB9CYV. (QSLs via bureau preferred, Direct: Oversea mail with 2 US-$ needed, Europe 1 US-$). Stations worked can be found after the DXpedition on the following Web-Page:
http://ab5eh-lin.tamucc.edu/~hb9cyn
Also, QSL requests (via bureau) may be sent to the addresses mentioned on the WWW-site above.

FS/FJ, SAINT MARTIN. Dick, K3DI, will be here and active as FS/K3DI. He hopes to get a wire up and be on during the CQ 160M SSB Contest on February 28th and March 1st. Also, he will be active in the REF SSB Contest during the same weekend. QSL via his homecall (listed down below under VP2E) or via his E-mail address for bureau replies: wilder@clark.net

KG4, GUANTANAMO BAY. A RTTY team will be at GTMO for the 4th Annual World-Wide RTTY WPX Contest Sponsored by Hal Communications Corp! Team members are: Bill/KG4GC (W4WX), Rusty/KG4AU (WV3N), Jan/KG4QD (K4QD), Joyce/KG4OS (WA4OMS), Wayne/KG4WD and Clayton/KG4PK. Look for KG4GC to be used during the contest February 14-15th. Members will arrive at GTMO on the 13th and depart on the 20th of February. The team will be active after the contest on all modes and bands. A special thanks to Rusry for sponsoring them! QSL Contest QSO's to: Bill Gallier, KG4GC/W4WX, 4094 Sandy Run Drive E., Middleburg, FL. 32068.
Please include a SASE. Bureau cards will also be answered. Non-contest QSO's go to home call. Any comments or questions can be sent to: w4wx@bellsouth.net

KH1/KH5/KH5K, BAKER/HOWLAND ISLAND, PALMYRA ISLAND AND KINGMAN REEF. Seven operators of the South Sandwich Island Antarctic DX Group (SSIDXG)

and the Midway-Kure Island DX Foundation (MKDXF) plan to be active again from these two islands. Activity will begin February 4th with a 3-5 days operation from each islands. Activity will be on CW/SSB and RTTY. OPDX InterNet Subscribers will receive the official press release as an additional bulletin.

MW8, WALES. Operators G3NKC, G3NLY, G5LP, G4BWP, G0KRL and others to be confirmed later, will activate the Welsh island Anglesey (EU-124) in the IOTA contest later this year. Their callsign this year will be MW8Z. (Previous operations were as MW7Z, MW6Z and GW5LP/P). More information will be forthcoming. QSL MW8Z via G5LP.

QSL INFO AND NEWS.....
Kaz, DL6FDB/JA1IST) and Joe, JA1LZR, who operated from HB0-land last weekend (Jan. 16-18th), made a total of 1500 QSOs. QSL HB0/DL6FDB to DL6FDB or via bureau. QSL HB0/HB9LEY via his QSL Manager, JH1BSE or bureau.

An update to QSL Manager Michel, HH2HM, states he is only the manager for UA0FDX, BA4TB, T95LGN, EX2M, HH2PK, UN7EG and UN7FJ. Also, the only valid address is: Michel Hamoniaux, PO Box 104, 22650 Ploubalay, France. Some other sources (such as Buckmaster) show a Hatian address for HH2HM. Michel asks that requests go only via the French address.

IS IT BOGUS OR NOT? Steve, VK3OT/KL7, of Wasilla AK, reports to OPDX a station was heard, VK9YQS working 40M CW to Japan. Steve states, "In my opinion, although VK9YQS is on Macquarie and has been worked on 6M band, his licence class is technical and as such he does not have HF priviledges, Also, I am not his QSL manager since December, 1990. In this case, the WFWL will not work unless there have been some changes to the Aussie laws permitting Limited licencees on HF. I was also unaware Doug ran CW on any band. So I suggest people ask one of the other VK0's like GW or ask VK9NS to investigate this."

Paul, N5PGI, reports he worked a 9K2RR (May 97) who said QSL via K1VKO. K1VKO advises that he is NOT and NEVER HAS BEEN QSL Manager for this station (or any other for the last 5 yrs).

EP2MKO - Bill Moore at the DXCC Desk advises that this station is OK for DXCC. QSL via UA6HCW.

SPACE "A" DXPEDITION GROUP". Bill, W4WX/KG4GC, is interested in forming a "Space "A" DXPedition Group". Members would be from all over the world. Only requirements would be: [a] retired military with space available privileges, [b] have email address. The group would communicate via e-mail and organize at least one DXPedition a year. There are many places available to visit via military air. In the past couple of years, Bill has been to CU, JA, V2, HP1, HP3, KG4, KH6, KP4... With some help on arranging transportation and permission, Bill states they could go to places like: HR, VP9, KH2, WH0, HH, VQ9, HZ and many other military facilities!! Send your thoughts and ideas to Bill at: w4wx@bellsouth.net

SPECIAL EVENT. The 1998 Winter Carnival Special Event Station will be using the a special 1x1 callsign W8C beginning Thursday, January 29th at 1100z and lasting through Saturday, January 31st at 1100z. Suggested operating frequencies will be on or near: 3984, 7246, 14256 and 21336 kHz. The Husky Amateur Radio Club, at Michigan Technological University, will be operating the annual Winter Carnival special event station. There will be certificates available. For more info on the Husky Amateur Radio Club, visit the website at http://w8yy.resnet.mtu.edu or, for more information on Winter Carnival at Michigan Tech., stop by the MTU homepage at http://www.mtu.edu

"THE NEW DXCC RULES -- WHAT WAS CHANGED?" Editorial by Tedd Mirgliotta, KB8NW. OPDX InterNet Subscribers will receive this as an additional bulletin. If you are not a subscriber and did not receive a copy of the new rules, send a message (E-Mail) to opdx-request@nshore.org along with the word "archive" in the "Subject:" line and then use the command: get volume98/340.1 (command is case sensitive). Also, you can get a copy from the official OPDX HOME PAGE (provided by John, K8YSE): http://www.en.com/users/k8yse/opdx.html

THAILAND/MALAYSIA 40 METERS NET. HS1RU net control of this 40 meter net on 7060 kHz at 1300z will now listen on 7153 every day at 1330z for any USA stations that wish to work him.

V2, ANTIGUA & BARBUDA. Team Antigua will once again activate V26B from this beautiful Island in the upcoming ARRL DX Contests, both CW and SSB. Their entry in both contests will be a Multi-operator/Multi-Transmitter catagory. QSL V26B to WT3Q. The following are the operators of V26B (with their own personal V2 and QSL routes): V26A (Dale/N3BNA via WB3DNA); V26B (Sam/WT3Q via WT3Q); V26DX (Doug/W3CF via KK3S); V26E (Darrell/AB2E via AB2E) and V26U (Bill/W2UDT via W2UDT). Other operators included: John/N2NC, Andy/N2NT, John/WA2C, and possibly a few other operators will be added to these two operations. Please note that in Team Antigua there are many Frankford Radio Club Members. The Frankford Radio Club, celebrating its 70th anniversary, has extended its qualifying period for their beautiful award. Additional information about the Frankford Radio Club and the 70th Anniversary Award can be found at the following WEB site: http://www.frc-contest.org

V3, BELIZE. A joint IOTA DXpedition between the members of the Southern CA DX Club and the Bay Area DX Association (MI) will activate South Water Cay, Belize (IOTA NA-180) for the period 3-10 February 98. Operators will be V31VI (N6KZ), V31UY (N6UY), V31NX (N6FH), and V31TR (K8BK). Operations will be on all bands 10-160 meters on both SSB and CW. Equipment will be 100 watt transceivers with verticals and one 3-element triband yagi. Electrical power will be from a solar-charged battery system. QSL to home US calls.

VK0, MACQUARIE ISLAND. The 59(9) DXReport states Tom, VK0TS, is now back in Australia as VK1TS. He may go back in 1999 with better gear. Currently there is only one amateur on the island and only on UHF.

VP2E, ANGUILLA. Dick, K3DI, will be active as VP2EEI in the ARRL CW Contest (February 21-22nd). QSL via homecall (Dick Wilder, K3DI, 913 Shore Acres Road, Arnold, MD 21012-1724) or via E-mail for a bureau QSL: wilder@clark.net

YS, EL SALVADOR. The DX-group from Finland, originally aiming to activate Guatemala, has now crossed the border of El Salvador and has activated YS1X, especially for Europeans. TG0OH and TG7/OH3JF operations have been cancelled (NO other details given). The group will be active until Friday, February 6th. They will be near the City of San Salvador, at the QTH of Raymundo, YS1RRD. YS1X is the "contest" call sign of YS1RRD. Operators include: Carl/OH6XY (CW, RTTY), Toni/OH1TD (SSB), Heikki/OH3JF (CW) and Raija/OH7LIX (SSB). Suggest Frequencies:

CW: 1827, 3507, 7007, 10103/10108, 14007, 18077, 21007,
24897, 28007. ("Seven up" from bottom)
SSB: 1840, 3789, 7045, 14195, 18145, 21295, 24945, 28495
RTTY: 14088, 21088, 28088

One station will be on for 24 hours per day. Second and third stations will be on at least 16 hours per day. The fourth (QRP) station will occasionally be active. QSL via OH2BU, Jari Jussila, Pilvijarvi, FIN-02400 Kirkkonummi, FINLAND

1998 DAYTON DX DINNER ANNOUNCEMENT. The Southwest Ohio DX Association is pleased to announce the Thirteenth Annual DX Dinner to be held on Friday, May 15th, 1998, at the Crowne Plaza Hotel, Dayton, OH. There will be a cash bar at 6:30 PM and dinner at 7:15 PM. Tickets are $30.00 and must be purchased in advance. Groups wishing to sit together must order as a group. A table seats eight. Please make your check or money order payable to SWODXA and send an SASE for ticket return. Seats will be assigned in the order that requests are received. Seats will be assigned on 15 March 1997. Seating is limited. Please order tickets from Tom Inglin, NR8Z, 4061 Eaton Road, Hamilton, OH 45013. For information on the dinner, contact Steve Bolia, N8BJQ at (937) 788-2803 or e-mail to n8bjq@erinet.com. Check the SWODXA homepage at http://members.aol.com/SteveB4622/index.htm for updates.

Walt, good luck...I have had many qso's with Cuba & am not sending
anymore cards...have never recieved back a one. They are very friendly
but maybe not to dedicated.

I believe ....who started when...who started how....or who started why in this fine hobby is illrevalent to any reasons why we must learn CW to upgrade for priveliges on the low bands. It's the rules we must adhere to & respect. Sure time moves on...we don't drive horse drawn buggies, but they do exist. A law student must study solved cases, a history student must study the alimo, we must take a driving test for a drivers liscense. Ham radio is a privelege not a right that must be earned not easily obtained.

Walt, you could be right...I never thought of that..although I did send some through a QSL manager in Texas in Sept. with no reply yet. I remember I was very tickled in Sept. as I had just got my tower & KLM installed the day B4 & first QSO in the morn. was Havana...we chatted for almost 30 minutes.
Take care....

Bill, I'm not necessaraly defending the code form of immissions.
Personally I don't even use it anymore except to keep my "ear" in it. In
fact I was enjoying it until I had to get my speed up to pass my 20wpm.
I can't write that fast & it became frustrating to read my copy. I did
it
& somewhat proud & thankfull that I did. I guess what I'm saying is,
right now it's the law of the land & he or she who wants the privileges
must go through it. I don't have an answer to the restructuring needs,

but I can relate to the frustration of many new hams. I do encorage
those
who want to upgrade @ our VE sessions not to give up & help them with
study tactics. Good luck with youre endevoure.

CDXC
(Chiltern DX Club)
The UK DX Foundation
Spratly Islands 1998
12-24 February 1998

A multinational group of DXpeditioners, primarily members of the UK's CDXC (Chiltern DX Club), the UK DX Foundation, will operate from Layang Layang Island in the Spratlys in February 1998. The operation will run from 12th to 24th February 1998, allowing two full weekends on the island and is timed to take place soon after the island re-opens to visitors following the typhoon season, in order to maximise the opportunities for good LF propagation. It is also hoped that sunspot numbers will by then have started to increase, and that the expedition will enjoy favourable HF propagation.

The team is expected to include G3NUG G3OZF G3SED G3WGV G3XTT G4JVG G0OPB K5VT VK2BEX 9M2OM(G3NOM) and 9M6SU. It is planned to keep four stations on the air round the clock, to maximise band openings. All HF bands will be activated, on SSB, CW and RTTY, and the group will also have equipment for 6 metres. The team will use a wide selection of monoband and multiband antennas including four-square arrays for both 40 and 80 metres. The callsign will be 9M0C.

Layang Layang (also known as Swallow Reef) has been the location for a number of Spratly expeditions, including 9M0S and 9M0A. The island has been developed by Malaysia as a dive resort, and has permanent accommodation, mains power and an airstrip. The Spratlys currently rank at number 25 worldwide in the latest (Jan/Feb 97) DX Magazine poll, and 12th for East Coast USA. They also rank 18th in the digital "Most Wanted" list (AA5AU). Layang Layang is also in Zone 26, one of the rarest zones on the LF bands, and therefore in great demand. The Spratly Islands count for AS-051 in the RSGB's popular Islands on the Air Programme.

The DXpedition team includes veterans of many DX and contest operations, with wide experience of both the LF and HF bands, and of all modes. It is intended to make significant use of computer and Internet technology to make information available about the expedition and to expedite QSLing after the event. QSO data will be uploaded to the Internet while the expedition is in progress. A Web page is available at http://members.aol.com/spratly98 with up-to-the-minute expedition news. Pilot stations in Europe (G3ZAY), the US (N1DG) and Japan (to be announced) will act as an interface to the team, in line with the recent practice of

other major expeditions. Phil Whitchurch G3SWH will be QSL manager, and QSLs will be available through the bureau or direct. Phil's address is 21 Dickensons Grove, Congresbury, Bristol, BS19 5HQ, England. Bureau cards will also be answered 100%.

We are delighted that Yaesu have already offered the use of HF and 6m radios. We will be taking 4 FT-1000MPs and 2 FT-920s. Yaesu have also helped with UHF transceivers for the packet network we are developing for the island, to link the operating positions. AEA Timewave and Nevada Communications have helped with TNCs for the packet network, and NI6T, a veteran of several major DXpeditions, will loan a specially-modified PK-232 for HF RTTY. Cushcraft, via Nevada Communications, will be providing the HF antennas, which include beams for 10, 15 and 20 metres and for the WARC bands. Gladiator will provide verticals for the low-band arrays. Leading UK amateur radio dealer, Martin Lynch & Son, will be supplying Westflex cable runs. The team has also accepted the offer of a Battle Creek Special antenna for the LF bands. Dunestar will be loaning us three sets of filters for all nine bands. The Malaysian Tourism Promotion Board has kindly agreed to help with the printing of QSLs and will sponsor a series of prizes and awards in connection with the expedition, details of which will be released later. Sabah Tourism Promotion Board and Reliance Pacific, owners of the Layang Layang resort, are also helping to support the operation.

In addition, a number of Clubs, DX Foundations and individuals have already made generous donations, and others will very much be welcomed to offset the substantial budget for the expedition (including aircraft charter to the island). The early supporters include the Radio Society of Great Britain, Northern California DX Foundation, Clipperton DX Club, JH1AJT, INDEXA, the Central Arizona DX Association and the European DX Foundation, to whom the team extends its thanks. All individual and corporate sponsors will be acknowledged on our Web pages and elsewhere.

Further details about the operation will be sent out as it becomes available. Additional sponsorship is being sought, and donations can be made to K5VT (USA), VK2BEX (Japan/Oceania) and G3WGV (elsewhere). If you wish to be e-mailed directly with information as it becomes available, send a message to the expedition's publicity officer Don Field G3XTT at g3xtt@lineone.net

Date issued: October 1997

Annex A
Operators

A Asahina (VK2BEX), an Australian citizen of Japanese ethnic background. Atsu Asahina was on the 1993 Mellish Reef DXpedition and has recently returned from a major amateur radio DXpedition to a Canadian offshore island. He has also operated from Nauru and Willis. His Japanese language skills will be of great benefit to our operation due to the relative proximity of Layang Layang to Japan, with its numerous amateur radio operators.
D F Beattie (G3OZF) British, an amateur radio contest operator, and

President of the Chiltern DX Club - the UK DX Foundation. Don Beattie, a member of the Radio Society of Great Britain (RSGB) Management and 'Islands on the Air' (IOTA) Committees, has operated from numerous countries and island groups, including Pulau Pangkor. He has held a Malaysian visitor's amateur radio licence and works as Chief Executive (Personnel) for a major UK-based global organisation. Don has also recently become a member of the RSGB Council, the organisation's governing body.
A J Canning (G0OPB) British, with a Malaysian wife. A keen contest and DX operator, Tony knows Sabah well. He has many friends in the Malaysian amateur radio community and has held a temporary Malaysian amateur radio licence. A Chartered Engineer, Tony Canning's radio experience commenced with four years as a marine radio operator followed by three years of shore based maintenance work. He is now an Assistant Chief Engineer with Racal.
E N Cheadle (G3NUG) British, a member of the RSGB Management Committee, the HF Committee and the 'Islands on the Air' (IOTA) committee. Neville Cheadle, who is Chairman of the Chiltern DX Club, has a long connection with Malaysia, having been a senior partner in the Price Waterhouse management consultancy, and undertaken consulting assignments in Malaysia. He has also operated amateur radio from many of the Malaysian offshore islands.
M Devereux (G3SED) British, is internationally known for his 34 yrs work on 160 mtrs and more recently 6 Mtrs. He was part of the team that activated Jordan on 6 metres for the first time as JY7SIX in 1994. Mike was a member of the Camel Trophy Expedition Team providing global communications from remote parts of the world. During the past five years he has operated 160, HF and 6 metres from 9M6, LU, CE1, V31 and Jordan as JY8ED. Mike is a keen CW operator and member of the prestigious First Class Operators' Club. Professionally he is managing director of a UK based communications company and the publisher of a monthly Hobby Radio magazine.
D I Field (G3XTT) British, an internationally-known radio amateur, and amateur radio writer. He has taken part in amateur radio operations from a number of countries in Europe, Africa and North America, and also holds a US amateur radio licence. Don Field is also a member of the RSGB Management Committee, and an experienced contest operator. He is a senior manager for BT (British Telecom), in an international business development role.
R Gerrard (G3NOM/9M2OM) A British citizen, Ray Gerrard is a self-employed telecommunications consultant currently working and living in Malaysia. Ray has participated in a number of amateur radio operations in South East Asia, including Thailand, Bangladesh and Myanmar as well as from Malaysia.
J R Linford (G3WGV) British, an experienced contest and DXpedition operator who took part in the 1993 Mellish Reef DXpedition. He is past Chairman of the local radio club and of the Chiltern DX Club. Also licensed in the USA, he is a member of the First Class Operators' Club, whose membership is limited to 500 world-wide. Professionally he is the Business Development Manager of a UK Public Telecommunications Operator. His computer networking skills will be used during the proposed DXpedition to keep track of contacts made and to maintain the DXpedition's databases on the World Wide Web.
D Soh (9M6SU) Malaysian. Donald Soh has been working with the Public Works

Department, Sabah, for over 25 years. Originally trained as an electrician, he took up amateur radio ten years ago and obtained his first transmitting licence in 1988. He is a member of the Sabah Amateur Radio Society and has held several SARS committee posts over the years. He has been in the Boys' Brigade movement for 30 years and is now the Battalion President. He recently established an amateur radio station with the callsign 9M6SBC to promote the hobby amongst club members in Sabah.
S E Telenius-Lowe (G4JVG) British, full-time staff member of the RSGB and News Editor of the internationally influential magazine RadCom. Also an active contest operator and experienced in organising and operating on amateur radio DXpeditions to remote parts of the world. He was a member of a highly successful DXpedition to Mellish Reef in the Coral Sea in 1993 and has operated as VK9YG, but is perhaps best known for his three years as P29DX. Steve Telenius-Lowe operated from Pulau Pinang in 1996 and has held a Malaysian amateur radio licence.
Dr V Thompson (K5VT) US citizen and internationally-known DXpeditioner, Vince Thompson is the fourth member of the team who was also on the 1993 Mellish Reef DXpedition. More recently, he was amongst the first radio amateurs allowed to operate from Myanmar. Dr. Thompson is a leading gynaecological surgeon, specialising in oncology.

Annex B

Equipment & Antennas

Yaesu are supplying six transceivers for the use of the DXpedition. There will be four main operating positions, each equipped with an FT-1000MP, and Dunestar filters to limit inter-station interference. Each operating position will also have a PC for logging purposes, linked by low power UHF link to the main log server (see Annex F for further details of the innovative software system to be used). One of the four main operating positions will be equipped with a modified PK-232 terminal unit for RTTY operation, and second PK-232 will be available for back-up.

A fifth operating position, equipped with an FT-920, will be used primarily for 6m operation, and will run in beacon mode when there is no band opening.

A second FT-920 will be available as a back-up radio for any of the operating positions.

The antenna system is expected to consist of the following:

160m: Battlecreek Special vertical, which will also be a back-up antenna for 80 and 40 metres.

80m: 4-square array of Gladiator vertical antennas.

40m: 4-square array of Gladiator vertical antennas.

20m: Cushcraft 3-element monoband Yagi

15/10m: Two Cushcraft A3S multiband Yagis, one with extension for 40m.

30m: Phased verticals

30/17/12m: Cushcraft A3WS

6m: Cushcraft Yagi

A Butternut HF-6V vertical will serve as a general back-up antenna and for monitoring propagation.

Antennas will be spaced as widely as possible to minimise station interaction and, in some cases, allow simultaneous operation on both CW and SSB on the same band. Something like 1km of co-axial cable will be used!

Annex C

Band Plans

The following frequencies should be used as guidelines, and all are +/- QRM. In any case, these frequencies are subject to comment by the DXing fraternity, and may be changed before the DXpedition commences.

160: CW 1824, SSB 1845
80: CW 3502, SSB 3805 (QSX down)
40: CW 7002, RTTY 7035, SSB 7080
30 CW 10102
20: CW 14022, RTTY 14080, SSB 14195
18: CW 18072, SSB 18145
21: CW 21022, RTTY 21080, SSB 21295
24: CW 24892, SSB 24945
28: CW 28022, RTTY 28080, SSB 28495
50: CW 50102, SSB 50145

All operations will be split up, with the exception of 80m SSB where the split may also be down to accommodate both EU and USA requirements. Please do not under any circumstances call on the DXpedition transmit frequency unless the operator clearly indicates that he has reverted to transceive. If this happens at all then it will only be towards the end of the DXpedition when the pile-ups are worked well down.

Splits will be kept to a minimum consistent with the size of the pile-up. On CW it is hoped to contain the pile-up within 5KHz and on SSB within 20kHz.

It is appreciated that the published frequencies will give problems to some classes of USA licenses and possibly elsewhere in the world. All 9M0C operators will be aware of country-specific and licence-specific bandplan limitations. The DXpedition will therefore also operate in the general/novice class sections of the bands from time to time as the DXpedition progresses, specifically looking for those license classes with limited allocations.

Annex D

Expedition Philosophy

The 9M0C DXpedition is being planned with the intention, to borrow a phrase from a well-known beer advertisement, of "reaching the parts which other Spratly expeditions have not reached". By taking the latest equipment, a substantial amount of antenna hardware, and making effective use of computer systems and the Internet, the target is to make at least 40,000 QSOs, with particular emphasis on specialist bands and modes, and on reaching parts of the world (such as east Coast US) which have a difficult propagation path to Spratly.

The operators will use split-frequency operation at all times, unless pile-ups become minimal towards the end of the operation, and there will be no list or net operations. The operators will endeavour to use best practice at all times, including frequent station identification.

Logs will be posted regularly on the Internet (with help from Don Greenbaum, N1DG) which, it is hoped, will minimise the problem of "insurance" contacts.

QSLs will available at the earliest opportunity after the DXpedition, and will be available direct (for direct requests) and via the bureau (for cards received via the bureau). SWL cards will also be answered.
Annex E

Special Interest Focus

The CDXC Layang Layang expedition plans to pay particular attention to special interest activities including the low bands, the WARC bands, 6m, and RTTY. With the potential to run 4 HF stations plus 6m simultaneously, we should be able to accomplish this while, at the same time, satisfying demand on the bread-and-butter bands of 20, 15 and 10 (which we hope will be open to a number of parts of the world by then).

6m
On 6 metres, we will be using the new FT-920 transceiver, kindly loaned by Yaesu, and capable of running 100 watts output. We will be using Yagi antenna, and will maintain a beacon on 50.110MHz in order to alert distant operators to band openings. G3SED, an experienced 6-metre DXer, will oversee operations on this band.

LF Bands
We have several team members with extensive LF experience (G3XTT, for example, has 220 countries worked on 160, and holds several records for CQ WW Phone and CW contesting on 160). Although space on the island is limited, we believe there is room to set up a four-square antenna for 40 metres, another 4-square for 80 metres, and a reasonable vertical/inverted-L for 160. These antennas will, almost certainly, have to serve for receiving as well.
We have paid particular attention to the successful LF activities of a number of recent expeditions, especially the VK0IR operation, using four-square vertical arrays from Gladiator, and several operations (P2 S2 VK9) by a German group using Titanex verticals, and intend to emulate their success. By scheduling our operation early in the year, we expect good LF propagation to all parts of the world, and expect to cover all sunrise and

sunset openings on all three LF bands throughout our stay on the island. Beverage antennas will not be used as the layout of the island precludes their use in the main directions. However, we are looking into other types of directional receiving antennas for 160 metres.

RTTY
Several of the expedition members have extensive RTTY experience. K5VT, VK2BEX, G3OZF and G3XTT are all long-time RTTY operators, with DXing, contesting and expedition experience. We have been offered, by Garry NI6T, the loan of a specially modified PK232, used by VK0IR and other major expeditions. By siting our HF stations as far apart as possible within the confines of the island, we hope to be able to run RTTY simultaneously with operating at least one other mode on the same band. RTTY will not, therefore, have to suffer in second place to SSB or CW.
Our prime band for RTTY operation will be 20 metres, but we will make use of other bands as appropriate to ensure that every part of the world has the possibility of making RTTY QSOs.

Annex F

SPRATLY DXPEDITION SERVER
As part of the DXpedition's programme to optimise technology, the entire area of logging has been examined closely. It is intended that all QSOs made during the DXpedition will be immediately logged to computer and innovative techniques have been devised to manage the logging process and provide information in real time to the operators. This unique project has resulted in the Spratly DXpedition Server, the rationale and objectives of which are discussed below.

Introduction
Many DXpeditions have attempted, with greater or lesser success, to log QSOs at several operating positions using computers and then merge the logs into a consolidated, centralised log. Usually this has been done using the de-facto standard CT. In more recent times the consolidated logs have occasionally been made available in some form on the Internet, sometimes even whilst the DXpedition is still in progress.
A number of factors have tended to limit the success of these experiments:
Most DXpeditions want to use laptops because of weight and space considerations. Unfortunately, laptops are poorly equipped in terms of serial ports – few have more than one. CT will work with two serial ports in a "daisy chain" configuration but this is problematic in that failure of any component in the chain signals failure of the network as a whole.
CT, whilst an admirable program for contesting does not really adapt fully to DXpeditioning where, these days, there is a real prospect of making 50k to 75k QSOs. The QSO database in CT is held in memory and this means that substantial machines are needed to support a major DXpedition, since all QSOs from all stations are held on all logging computers.
Most inter-computer links tend to be at RS-232 level, which has a generally poor signal-to-noise performance resulting in problems when several kW of RF are flying round in the vicinity.

The above observations prompted a reappraisal of objectives and technologies, the results of which are presented below.

Objectives
1. The logging stations should be able to operate well with PCs in the upper 286 or lower 386 class;
2. None of the PCs should need to be capable of supporting more than a single serial port;
3. There should be no limit, within reason, on the number of QSOs that can be logged, either at the logging station or elsewhere;
4. The entire system should have good immunity to RF fields;
5. The entire system should have few single points of failure of any type and especially should have the absolute minimum of points of failure that could cause loss of the entire system;
6. The system should be capable of collecting all logs and creating a consolidated DXpedition log both during and after the DXpedition;
7. The system should be capable of creating log updates for upload to the Internet;
8. The system should be able to provide operators with DXpedition-wide and individual statistics, on-line from the operating position.

Basic principles
A separate "Server" is provided, into which all logging stations connect via packet TNCs. The use of TNCs is a key component in the strategy as the multi-stream capability of these units means that they can be employed as a multiplexer, concentrating several data streams to a single COM port on the server, thus meeting objective 2 above. The server software has been developed by John Linford G3WGV, author of the popular TurboLog station logging software.
Each logging station runs a modified version of TurboLog. TurboLog was used in the VK9MM DXpedition in 1993, logging over 44,000 QSOs. The modified version knows about the DXpedition server and works with it to provide various DXpedition specific features. The logging stations connect via packet TNCs and UHF radio links to the server.
The server provides the following major functions:

1. Automatic collection of QSOs, both at the time they are made, or, in the event that the server has been off-line, in background "catch-up" mode;
2. Various statistical analyses which can be requested by the operators at the logging stations;
3. Talks, announces and WWVs, precisely as per PacketCluster;
4. Maintaining DXpedition system time on all connected PCs;
5. Capability of uploading to the Internet using the QSO format devised for the VK0IR DXpedition;
6. Provide each operator with details of band, mode, etc. in use at the other operating positions.

The end result will be that log consolidation will happen in the background, without intervention by the expedition operators, the software at the same time allowing the operating positions to maintain contact by means of "Talk" messages, etc. A range of queries of the main log database will allow the team to identify successful propagation paths and band

openings.

The 9M0C expedition will provide a valuable test of the server software which, it is hoped, can then be used by subsequent DXpeditions.

(Chiltern DX Club)
The UK DX Foundation
Spratly Islands 1998
12-24 February 1998

Arrangements for our forthcoming 9M0C expedition to the Spratly Islands are going well. Here is the latest information. This is the second bulletin I have sent out. If you didn't get a copy of the first one (which went out early November) and would like one, please let me know. Please take time to check our Web pages for the latest developments. We anticipate putting out one more information bulletin before our departure, with the final operator list, propagation predictions, information about log checking via the Internet and the latest status report.

73

Don Field G3XTT (expedition publicity officer, e-mail: g3xtt@lineone.net)

Shipping:
Nine cases have been shipped by sea. They left Southampton for Kota Kinabalu in Sabah Malaysia on 30 November. They will arrive in Kota Kinabalu in early January. The total weight of the cases was 1,386 kgs and the total volume was 5.89 cubic metres. The heaviest case weighed 325 kgs and the longest containing the Titanex vertical was 6.15 meters long. See our web pages for the latest photographs.

All the Yaesu equipment has now been shipped from Japan. This will also arrive in Kota Kinabalu in early January where it will be combined with the shipment from the UK. The combined shipment will then be sent to Pulau Layang Layang before our arrival.

Antennas:
Prior to shipping all the antennas were fully assembled and then broken down into suitable lengths for shipping. All booms and elements were colour-coded to facilitate assembly. There are four Cushcraft HF beams, four-squares for both 40m and 80m utilising Gladiator verticals, phased verticals for 30m and a Titanex for 40m, 80m and top band. With the Battle Creek Special we will have at least two antennas for virtually every band.

Neville G3NUG recently bought the home-base version of the Titanex vertical for 160m, 80m and 40m. He has lent this to the DXpedition.

We are also taking around 2000 metres of coax. Tony G0OPB did a wonderful job in fitting around 150 PL-259 plugs! All the cable ends were sealed before shipment. We have also shipped 64 heavy guy stakes! We spent around 20 man-days building the antennas and getting everything ready for

shipment.

Timetable:
The first main group that now includes all the UK contingent now plans to arrive on Pulau Layang Layang on Tuesday 10th February. This is two days earlier that originally planned but this gives us three full days to set up the very extensive antenna farm and the five stations. The second group arrives on Friday 13th February. We will then be fully operational for at least nine full days including two complete week-ends.

QSL arrangements:
Phil G3SWH, our QSL Manager, is happy to respond to requests for bureau cards by e-mail. (phil@g3swh.demon.co.uk) . Bob Treacher BRS32525 will be dealing with cards for SWLs but requests should be routed through Phil. The Malaysian Tourism Promotion Board (MTPB) has agreed to sponsor the printing of the cards -- we are most grateful for their support.

Competition:
We are having discussions with MTPB about a possible competition that they may also sponsor. The rules are still being worked out but prizes could be awarded to those stations making the most band/mode contacts with 9M0C from each continent.

DXpedition Cluster:
This has been tested thoroughly and is proving to be very reliable. We are now using PCMCIA cards as interfaces, to give us an extra COM port on each of our portable PCs. Recent enhancements include:
* Full frequency logging
* The facility for one operator to know the frequencies (and operators) of all the other stations.
* Logging of both receive and transmit frequency so that we can review how much spectrum we are using.

Sponsorship:
New sponsors include: CDXC, GMDX Group, Dateline DX Association, German DX Foundation, Gladiator Verticals, Nevada Communications, 599 Report, G3JNB, G3PEM, GW4VEQ and JH1AJT. We are still seeking further sponsors -- the costs of shipping have been higher than anticipated.

Pilots:
The following have kindly agreed to act as pilot stations:
Europe: Martin G3ZAY (spratly@dial.pipex.com)
North America: Don N1DG (n1dg@aurumtel.com)
Japan: Yoichi JP1NWZ (jp1nwz@cqpub.co.jp)

Two metres:
We plan a link on two metres to the repeater at a height of 11,000 feet on Mount Kinabalu in Sabah. This will be an interesting facility, particularly as CDXC contributed to the cost of this repeater.

Thank you:
We are very grateful to all who have supported us to date. There are a number of non-amateur organisations who have also made significant

contributions. These are good people to contact if you are planning a DXpedition.

* E & K International, Hemel Hempstead, Herts, UK
(Eddie and Ken)
E & K made numerous trip's to G3NUG's home to collect all the material for packing. They made the nine special cases that should be reusable many times.

Hi all:

Please forgive the bandwidth, but I would like your help. Our Site is now several months old, but we're looking for new and exciting links to add to our "Links Page". The KB8TNQ Ultimate Amateur Radio Page is becoming one of the hottest Sites on the Web and we want your ideas.

Check into the Site, a link is provided below, and leave us a note with your comments and suggestions...it's that simple. The bottom line is that we want our Site to be useful to Amateurs and those interested in the Hobby.

Thanks for your time.

7-3,
Erv KB8TNQ

Which is why a driver's license doesn't require horsemanship.
That IS the goal of nocode test advocates. Elimination of
te CW test by LEGAL changes to the regulations.

> A law student must study solved cases, a history
>student must study the alimo, we must take a driving test for a drivers
>liscense. Ham radio is a privelege not a right that must be earned not
>easily obtained.

Your point? Not one of the examples you give is in any
way synonomous with code tests.

In fact, ham radio is a privelege that is obtained by
passing a government test...and government tests should
be relavent as opposed to affirmative action testing
to preserve CW usage.

You're saying the dumber the dog, the easier he is to train. Any kid who grew up around animals knows better than that.

I see that you have no problems at all in fitting the "facts" to the No-Code Agenda, Gary. Too bad that you, as I, got stuck in the Incentive Licensing 'debacle' of 1968, lost lots of frequency privileges, and were 'forced' to upgrade-or remain forever bitter over it. It's very apparent that you never got over it, like far too many others.
Yes, it was a poorly designed and implemented plan for improvement of the ARS, surely there could have been a better path that would not have left so many with so much bitterness.....but for some people it did work to prompt them to learn and improve both their knowledge and their license class, their amateur privileges, as well as job advancement.

Hmmmmmm.....Cecil, you got that? You said you had no trouble at all learning CW as a kid, even did it well before you ever heard of ham radio. Looks like Gary thinks you're pretty stupid!
Give back your MENSA card NOW! We promise not to tell INTEL.

Gary, you obviously have a non-existant CW vocabulary, only 26 letters, 10 numerals and a few prosigns. If it were otherwise, you'd know better.

>

Couldn't have said it better myself! This computer came filled with about 40 games when I got it. What do I spend my "spare time" on the computer playing around with? NEC2, MINIPROP, Yagi Optimizer, etc. These lead to spending more time building and tweaking antennas, calling for hours into pileups on rare DX, but not playing video games!

Strangely enough, there is some truth in the above statement. From the time I was 13 until I went off to college, I was on CW night and day. My grades were pretty low and I almost flunked algebra and Spanish. My measured IQ in high school was not anywhere near the MENSA level.

Then I went off to college and gave up CW for a number of years. My IQ zoomed upward by about 40 points during my college years. Don't know if there's any cause and effect there, but I suspect in high school, I was operating CW to the exclusion and detriment of more important things.

Might be, Charlie. When I gave up CW my IQ climbed 30%. I had reached the point of diminishing returns with CW and more and more effort resulted in less and less improvement. I turned my attention to engineering where a little effort resulted in massive gains in knowledge and IQ.

That's one of the problems with a skill like CW. One tends to use it to the exclusion of learning anything new and valuable.

[[Forwarded via the DXpedition-Announce mailing list. See
http://ve7tcp.ampr.org/DX/Expeditions/ for details.]]

Team Antigua will once again activate V26B on the beautiful Island
Nation of Antigua and Barbuda in the upcoming ARRL DX Contests.
Both CW and SSB Modes in the Multi-operator/Multi-Transmitter
catagory. Our Grid Square is FK-97 and the IOTA number is NA-100.

[[ARRL DX CW: February 21-22 / SSB: March 7-8. For contest details
see http://www.arrl.org/contests/announcements/98/intldx.htm --lyndon]]

Please note that in Team Antigua there are many Frankford Radio
Club Members. The Frankford Radio Club who is celibrating its
70th anniversary has extended its qualifying period for this beautiful
award. Additional information about the Frankford Radio Club, The
70th Anniversary Award and All of its fine members can be found at:
http://www.frc-contest.org

The Operators of V26B and their QSL Routes:

V26A Dale, N3BNA QSL VIA WB3DNA
V26B Sam, WT3Q QSL VIA WT3Q
V26DX Doug, W3CF QSL VIA KK3S
V26E Darrell, AB2E QSL VIA AB2E
V26U Bill, W2UDT QSL VIA W2UDT

OTHER OPERATORS INCLUDE:

N2NC, John
N2NT, Andy
WA2C, John

And a few other operators will be added to these two
fine operations.

How to perserve international broadcasters -- email listserv in reverse.

Insead of DXers having to fax or email the respective gov's each time an international broadaster is threatened with removal from SW, why not have people subscribe to a listserver that sends message to PM's and MP's at interval of say once every 3 days. The subscribing person, however, would be told by email -- just to avoid abuse and to keep the e addresses up to date. Majordomo could do this fairly easily.

Not exactly Dick ... if that were true, you'd be exceptionally trainable,
and that's clearly not the case ... there's a difference between
"conditioning"
and "training" ... Morse requires conditioning, training requires intelligence.

Better yet, lets just remove them all from SW right now, then we can use
the 40 meter band.

73, Jim KH2D

278. [The Daily DX] Vol. 2 No. 19 - sample

Newsgroup: rec.radio.amateur.dx
Date: 1998-01-29 00:00:00 UTC
From: "Bernie McClenny, W3UR" <bernie.mcclenny@mail.wdn.com>
Message-ID: <34D0A533.191A@mail.wdn.com>
Source record: 30241

```
. ======================
*** The Daily DX ***
======================
Volume 2 Number 19
January 29, 1998
Edited by Bernie McClenny, W3UR

----------------------------------------------------------------------

Headlines

----------------------------------------------------------------------
```

Top DXer Bob Eshleman, W4DR, has been working with Omar, YK1AO, for about 6 months to get Syria on 160 meters. The antenna had to fit on a 45 X 150 foot flat without any wires running off the roof. A Gladiator TL160M Mark II top loaded vertical with an elevated radial system was chosen. The antenna will be 4 stories up and will easily handle 1500 watts from Omar's amplifier. With a system like this, Bob said "He should be regularly heard in North America." Omar will be able to pick the antenna system up in February provided Bob is able to act quickly. The cost of this antenna system will be around $500.00 and Bob is seeking some financial assistance from both individuals and clubs. Contributions may be sent to Bob Eshleman, W4DR, 1818 Manakintown Ferry Road, Midlothian, VA 23113.

Martyn, G3RFX, will be operating as 8P9FX from Christ Church, Barbados from 2 to 16 February. He will be mostly on 40 and 20 meters CW and SSB and will also try some 17 and 15 meters. His QTH will be right on the water. QSL via G3RFX.

After Martyn leaves Barbados Steve, K2WE, will be active from 17 to 24 February. He plans to be active in the ARRL CW DX Contest as 8P9AP on all bands. QSL via K2WE.

The Arkansas DX Association (ADXA) announces the following officers for 1998.

President: David Norris, K5UZ
Vice President: Dennis Schaefer, W5RZ
Sec/Treas: Glenn Wolf, AB5RQ

The Dateline DX Association is going back to the Pacific Ocean. This time the target island will be Wake (KH9). The operators include Tom, K8XP, Mike, N6MZ, Bob, N2OO, and Bill, N2WB. They plan to be active with 4 stations on CW, SSB and RTTY from 28 February to 11 March. The emphasis will be on the low bands and Europe. The callsigns have not been announced. QSL via WA4YBV.

Alain, F2HE, will once again be active from Les Saintes (NA-114) from 1 to 15 February. QSL via the bureau to F6LQJ.

Merv, K9FD, and Price, W0RI, returned home from Beijing, China and report the following band breakdowns from BY1QH.

Band QSOS
160 198
80 102
40 414
30 45
20 572

Color QSL cards will be printed up as soon as possible and QSL via K9FD.

Ali, A61AJ, will have his new contest station activated in the CQ WPX SSB Contest. Plans are for a 2 element 80 meter monobander to be installed on a 150 foot tower before the contest. All of the rotators are now working for 10 through 40 meters. Look for activity from this station on CW and SSB on all bands before and after the contest. QSL via W3UR.

Joe, W6VNR, will participate in this years ARRL DX SSB Contest from the Cayman Islands as ZF2AH. Before the contest he will be on CW and 12, 17 and 30 meters. QSL via W6VNR (ex WA6VNR).

QSN

3V8BB - TUNISIA - Was active yesterday on 14195 from 11:50 to 15:00Z working Europe, Japan and East Coast US stations.

9M2TO - WEST MALAYSIA - Can be found on 30 meters CW most days between 14:30 and 16:00Z.

9Y1YC - SINGAPORE - James was working East Coast US and South Americans on 10102 just after 23:40Z. QSL via AA5BT.

D2AI - ANGOLA - Diaz was working RTTY on 14086 from 21:25 to 22:30Z. He was mostly working Mid-West and West Coast US stations. QSL via CT1EGH.

D68YN & D68YV - COMOROS - Martin and Chris continue to activate this semi-rare Indian Ocean island. Yesterdays reports were as follows:

GMT Freq. GMT Freq.
---- ----- ---- -----
09 24893 18 14196
10 24945 19 14196
11 24945 28495 20 14196

14 18086 21 14196
15 18086 22 3503 10105
17 14196 23 10105

EK1700JJ - ARMENIA - Sergei, EK4JJ, was sporting his special event call yesterday on 21233 at 13:30Z. Armenia is celebrating 1,700 years of Christianity. QSL via GW3CDP.

JR6VSP - JAPAN - Fred, K3ZO, reports this stations was coming in via the longpath on 21019 at 14:40Z.

N2NL/KH2 - GUAM - Dave is now active from this Northern Pacific island. He started on 10105 just after 09:00Z. Just before 11:00Z he went to 7003 for about an hour. Around 12:00Z he showed up on 3507. Finally around 12:50Z he was on 1832. QSL via W2YC.

OD5NJ - LEBANON - Gaby was working all across the lower 48 states on 18125 from 14:15 to 15:00Z.

RX1OX/FJL - FRANZ JOSEF LAND - Slava was found on 14002 just before 21:30Z. QSL via DL6YET.

S79MX - SEYCHELLES - Kurt, HB9MX, is back on this Indian Ocean island. He came up on 15 meters CW around 08:30Z. Kurt has been here many times before and will more than likely be active on 160 meters again. East Coast US stations should look at their sunset. QSL via HB9MX.

T77C - SAN MARINO - Tony was working West Coast US stations on 3523 from 05:15 to 06:15.

UK8IZ - UZBEKISTAN - Yuri showed up on 3504 yesterday around 22:35Z.

VP5/KQ6SJ - TURKS AND CAICOS - Japanese stations report working Yuki on 3797 around 11:20Z and on 21245 at 22:50Z. QSL via JF6WBP.

Cecil, you remind me of my younger days and my experience. As a Boy Scout (yea we had em in New Mex) I learned semi-fore with the flags. At the time it sorta facinated me that I could stand on one hill and talk to a guy on the other hill. I even carried a pair of flags on my saddle, was going to warn the town of Indian attacks I guess, but then because dad was doing Morse for his tickets, I started that too. I got up to well over 20 (I was pretty good at it) sending the Montgomery Ward Wish book. Like a drummer I did it on everything and it was in my head all the time. Even when milking cows it had to be in OOK. One nite while milking one of the mildest cows we had, she kicked me the bucket and the stool I was on back on my head. I looked up at her and she was just staring at me. I looked at the rest and they too were staring. I got the message then, NOOOO MOOOOO OOOOOK on my things.

BTW, I now see girls at football games with only one flag and their messages look much better than mine. So now I have given it all up.

Regards

Ed

[[Forwarded via the DXpedition-Announce mailing list. Please see
http://ve7tcp.ampr.org/DX/Expeditions/ for details.]]

CDXC
(Chiltern DX Club)
The UK DX Foundation
Spratly Islands 1998
12-24 February 1998

This will probably be the last Press Release before our operation.
Everything is still on schedule, and much of our equipment has already
reached the island to await our arrival. We look forward to working
everyone from 9M0C.
We want to extend particular thanks to intrepid adventurers 9M6MN, 9M6HJ,
9M6II and 9M6SU who recently endured high seas and bad storms to make the
sea journey to Layang-Layang with our heavy equipment. While on the island
they achieved what we believe to be a "first", by setting up some 2m
equipment and working through the 9M6RGK repeater on Sabah to make QSOs
with 9M6JY & 9M6BZ. As far as we know, this is probably the first time that
VHF QSOs have taken place between Spratly and another DXCC country.
Note that for the propagation predictions to be readable, you need to view
this document in a non-proportional font. Please let me know if you need
copies of either of the previous two press releases.

Operators
Unfortunately Aki VK2BEX has had to withdraw from the operation, but we are
pleased to say that his place has been taken by not one but three new
operators:

John Krzymuski N2QW (ex-AB2EC). John is an experienced contest and DX
operator who until his recent transfer to New York was active as G4DQW.
John is a British citizen and has participated in numerous team efforts
both domestically and overseas. John works in the USA as a Product Manager
in a division of a global telecommunications co-operative.

Jeff Morris 9H1EL. Jeff is a holder of several European CQWW/WPX contest
records on SSB and CW, and is also active in RTTY contests. He won BARTG
RTTY spring contest last year, for example. Jeff is a retired
Electronics/Systems Engineer working in the oil industry on positioning of
Drillships by computer.

Kazuo Ogasawara JA1RJU. Kazuo is a Japanese national and an experienced
operator who was most recently involved in the last BS7H DXpedition.

This takes our final team to 13, as follows:

Leader - Neville G3NUG
Deputy leaders - Don G3OZF & John G3WGV
Others - Ray G3NOM/9M2OM, Mike G3SED, Don G3XTT, Steve G4JVG, Tony G0OPB, Kazuo JA1RJU, Vince K5VT, John N2QW, Jeff 9H1EL, Donald 9M6SU.

Shipping/Logistics
The nine cases shipped from the UK were successfully landed on Pulau Layang-Layang by a fishing trawler on 21 January (see above). All the Yaesu equipment is now in Kota Kinabalu - we will take this with us on our flights to the island on 8 and 10 February. A final air-shipment comprising mainly the hand-helds and TNCs for the newly developed DXpedition cluster leaves the UK during w/c 26 January. The Battle Creek will arrive in KK in the next day or so. Everything has gone to plan so far.....
John G3WGV has also compiled an extensive Operating Manual which will be the basis for our activities on the island. It covers everything from shipping lists and antenna layouts, to pile-up handling. In compiling it, we have taken a lot of good material from the VK0IR operating handbook, as that expedition did a lot to set standards for others to follow.

Pilot Stations
As we said in the last set of information, three pilot stations have been appointed. These are:

Europe: Martin G3ZAY (spratly@dial.pipex.com)
North America: Don N1DG (n1dg@aurumtel.com)
Japan: Yoichi JP1NWZ (jp1nwz@cqpub.co.jp)

Their role will be to channel communications to and from the team on the island (which will be equipped with a satellite telephone, as there have been some problems recently with incoming telephone calls to the Layang-Layang resort). Typically, they will receive comments about band openings, the suitability of the announced frequencies, brickbats and bouquets from the amateur community at large, and will summarise the key messages to forward to the island. This is to avoid information overload on the expeditioners, and yet ensure that we have a good idea of what we are doing right and what we are doing wrong. We will also be able to pass information out to the pilots and Martin, G3ZAY, as Chief Pilot, will have the job of keeping our Web site (http://members.aol.com/spratly98) updated. Hopefully, this will also include photographs (we are taking a digital camera).

Log checking via the Web
We plan to upload logs to the Web on a daily basis. This will not include full QSO information, but will allow you to check that your QSOs were OK. The service will be organised for us by Don N1DG (ex-WB2DND) who did the same for the Heard Island expedition, and by Richard, G4ZFE who has also run servers for DXpeditions. To check the logs, you need to go to the DXpedition home page at http://members.aol.com/spratly98 and select one of the two "am I in the log" servers. Generally you should select the one that is nearest to you. There are servers in the UK and in USA. Once at the server screen, simply type in your callsign and a list of QSOs will appear.

News on Sponsors
We are delighted that there are several new sponsors since our last press release. The list as of 28th January is as follows:

Corporate Amateur:
AEA Timewave
CQ Ham Radio Magazine (Japan)
Cushcraft
Dunestar
Gladiator Verticals
Martin Lynch and Son (UK)
Nevada Communications (UK)
Radio Active Publications (UK)
The 5(9)Report
Yaesu

Corporate Non-Amateur:
Camel
Malaysian Tourism Promotion Board
Layang-Layang Resort Ltd.
Sabah Tourism Promotion Corporation

DX Associations, Clubs & Foundations:
Arkansas DX Association
Battle Creek DX Group
CDXC of UK
Central Arizona DX Association
Clipperton DX Club (France)
Dateline DX Association
EuDXF (Germany)
German DX Foundation
GM DX Group
INDEXA
LA-DX-Groups
NCDXF
OKDXA
RSGB Expedition Fund

Individuals:
G2FNK
G3JNB
G3PEM
G3OFW
G3PMR
GW4VEQ
JH1AJT
NI6T
VK5WO
XE1CI

And, of course, the Layang-Layang team members themselves who are all making significant contributions to the overall cost of the operation.

We also want to thank the following off-site team members for undertaking a range of duties, missing out on the glory but taking on the chores!
BRS32525 Bob - SWL QSL Manager
G3SWH Phil - QSL Manager
G3ZAY Martin - Chief Pilot, EU Pilot and Web Master
G4PDQ John - EU PacketCluster Server
G4ZFE Richard - EU QSO Server
JP1NWZ Yoichi - JA Pilot
N1DG Don - NA Pilot and NA QSO Server

Given the higher-than-anticipated shipping costs, we are continuing to seek funding. Contributions may be sent to G3WGV (g3wgv@aol.com), JP1NWZ (jp1nwz@cqpub.co.jp) or K5VT (vince@getnet.com). G3WGV's mailing address is Canberra Lodge, Heath Ride, Finchampstead, RG11 3QJ, England.

QSLing policy
Much of the design work for the QSL card is complete, and we hope to get cards out soon after the operation is over. All QSL requests go to G3SWH. As we have said before, the expedition will respond 100% to QSLs received, both direct and via bureau. E-mail QSL requests may also be sent to phil@g3swh.demon.co.uk (give full QSO details please). Phil's mailing address is Phil Whitchurch, 21 Dickensons Grove, Congresbury, Bristol, BS49 5HQ, United Kingdom.

The Expedition plans to adopt the following policy with regard to direct QSLs, and encourages all direct QSLers to adhere as closely as possible to speed things up:

a) A self addressed envelope (SAE) should be provided.
b) Applications from EU and non EU countries should enclose at least one IRC.
c) Applications from non European countries should enclose at least $1 or two IRC's.
d) Cards for applicants not enclosing an SAE and adequate reply paid postage will be answered by surface mail or via the bureau as appropriate

Awards
Amateurs chasing the RSGB Supreme Commonwealth Award might like to note that this requires at least one contact with every Commonwealth call area. This includes Spratly under the 9M prefix, as this is a separate call area to 9M6.

And the latest Press Release from ARRL, regarding the revised rules for DXCC, included the following:

"The Spratly Islands, due to the nature of conflicting claims, and without recognising or refuting any claim, is recognised as a Special Entity. Operations from this area will be accepted with the necessary permissions issued by the occupying Entity. Operations without such permissions, such as with a self-assigned (e.g. 1S) callsign, will not be recognised for DXCC credit."

This emphasises the importance of obtaining operating permission from the relevant authority, in our case the Malaysian licensing authority.

After it's over..
Once we are home again, I will be sending out some further information to those on my mailing list, and we will be writing articles for the major ham radio publications including the Japanese CQ Magazine, the German Funk Amateur and, of course, RSGB's RadCom. We are also scheduled to present at the Visalia Convention, the RSGB Convention in October, and no doubt at many other venues too including, we hope, Dayton. Nevada Publications of the UK have also commissioned us to write the book of the expedition. Guess we're going to be busy for some months yet!

See you from Spratly!

Key:
ENA Eastern North America WNA Western North America
NA North America (east AND west) SA South America

Am Americas (ENA, WNA and SA) EU Europe (all)
EU(E) Europe (Eastern only) AF Africa
E/A All of Europe AND Africa VK Australia
JA Japan Pac Pacific rim (VK and JA)
LP Long Path

APPROX SUNSET / SUNRISE TIMES (for mid February)
QTH SS SR (UTC)
9M0C 1030 2245
W2 2215 1200
W6 0145 1500
G 1700 0730
UA3 1400 0500

The following has been provided by Bill, W4ZV, specifically in respect of our low band operations:

Short path bearings Sunrise (16 Feb) Sunset LP overlap
(@ 9M0C sunrise)
Magnetic North 8
Halifax VE1 358 1114 2143 58 min
Boston W1 5 1140 2217 24 min
New York W2 8 1148 2232 9 min
Atlanta W4 22 1221 2322 nil
Chicago W9 20 1245 2324
Dallas W5 34 1310 0013
Denver W0 34 1351 0037
Los Angeles W6 40 1437 0137
Seattle W7 32 1514 0133
From the above, you can see the following general points:

1. Short path propagation to the Northeast USA after 9M0C sunset will be very difficult due to the path's proximity to Magnetic North, however there is some darkness overlap with VE1/W1/W2 before 9M0C sunrise which will permit skewed and/or long path modes at this time.

2. The remainder of NA will only have a path after 9M0C sunset and before US sunrise (from 1035 until US local sunrise). We expect that stations in the Western half of NA will experience some very good openings at their sunrise. Those of us in Eastern NA will have much less probability of openings but nothing is impossible on 160!

We plan to upload logs to the Web on a daily basis. This will not include full QSO information, but will allow you to check that your QSOs were OK. The service will be organised for us by Don N1DG (ex-WB2DND) who did the same for the Heard Island expedition, and by Richard, G4ZFE who has also run servers for DXpeditions. To check the logs, you need to go to the DXpedition home page at http://members.aol.com/spratly98 and select one of the two "am I in the log" servers. Generally you should select the one that is nearest to you. There are servers in the UK and in USA. Once at the server screen, simply type in your callsign and a list of QSOs will appear.

News on Sponsors
We are delighted that there are several new sponsors since our last press

release. The list as of 28th January is as follows:

Corporate Amateur:
AEA Timewave
CQ Ham Radio Magazine (Japan)
Cushcraft
Dunestar
Gladiator Verticals
Martin Lynch and Son (UK)
Nevada Communications (UK)
Radio Active Publications (UK)
The 5(9)Report
Yaesu

Corporate Non-Amateur:
Camel
Malaysian Tourism Promotion Board
Layang-Layang Resort Ltd.
Sabah Tourism Promotion Corporation

DX Associations, Clubs & Foundations:
Arkansas DX Association
Battle Creek DX Group
CDXC of UK
Central Arizona DX Association
Clipperton DX Club (France)
Dateline DX Association
EuDXF (Germany)
German DX Foundation
GM DX Group
INDEXA
LA-DX-Groups
NCDXF
OKDXA
RSGB Expedition Fund

Individuals:
G2FNK
G3JNB
G3PEM
G3OFW
G3PMR
GW4VEQ
JH1AJT
NI6T
VK5WO
XE1CI

And, of course, the Layang-Layang team members themselves who are all making significant contributions to the overall cost of the operation.

We also want to thank the following off-site team members for undertaking a range of duties, missing out on the glory but taking on the chores! BRS32525 Bob - SWL QSL Manager G3SWH Phil - QSL Manager G3ZAY Martin - Chief Pilot, EU Pilot and Web Master G4PDQ John - EU PacketCluster Server G4ZFE Richard - EU QSO Server JP1NWZ Yoichi - JA Pilot N1DG Don - NA Pilot and NA QSO Server

Given the higher-than-anticipated shipping costs, we are continuing to seek funding. Contributions may be sent to G3WGV (g3wgv@aol.com), JP1NWZ (jp1nwz@cqpub.co.jp) or K5VT (vince@getnet.com). G3WGV's mailing address is Canberra Lodge, Heath Ride, Finchampstead, RG11 3QJ, England.

QSLing policy
Much of the design work for the QSL card is complete, and we hope to get cards out soon after the operation is over. All QSL requests go to G3SWH. As we have said before, the expedition will respond 100% to QSLs received, both direct and via bureau. E-mail QSL requests may also be sent to phil@g3swh.demon.co.uk (give full QSO details please). Phil's mailing address is Phil Whitchurch, 21 Dickensons Grove, Congresbury, Bristol, BS49 5HQ, United Kingdom.

The Expedition plans to adopt the following policy with regard to direct QSLs, and encourages all direct QSLers to adhere as closely as possible to speed things up:

a) A self addressed envelope (SAE) should be provided. b) Applications from EU and non EU countries should enclose at least one IRC. c) Applications from non European countries should enclose at least $1 or two IRC's. d) Cards for applicants not enclosing an SAE and adequate reply paid postage will be answered by surface mail or via the bureau as appropriate

Awards
Amateurs chasing the RSGB Supreme Commonwealth Award might like to note that this requires at least one contact with every Commonwealth call area. This includes Spratly under the 9M prefix, as this is a separate call area to 9M6.

And the latest Press Release from ARRL, regarding the revised rules for DXCC, included the following:

"The Spratly Islands, due to the nature of conflicting claims, and without recognising or refuting any claim, is recognised as a Special Entity. Operations from this area will be accepted with the necessary permissions issued by the occupying Entity. Operations without such permissions, such as with a self-assigned (e.g. 1S) callsign, will not be recognised for DXCC credit."

This emphasises the importance of obtaining operating permission from the relevant authority, in our case the Malaysian licensing authority.

After it's over.. Once we are home again, I will be sending out some further information to those on my mailing list, and we will be writing articles for the major ham radio publications including the Japanese CQ

Magazine, the German Funk Amateur and, of course, RSGB's RadCom. We are also scheduled to present at the Visalia Convention, the RSGB Convention in October, and no doubt at many other venues too including, we hope, Dayton. Nevada Publications of the UK have also commissioned us to write the book of the expedition. Guess we're going to be busy for some months yet!

See you from Spratly!

LP Long Path

APPROX SUNSET / SUNRISE TIMES (for mid February)
QTH SS SR (UTC)
9M0C 1030 2245
W2 2215 1200
W6 0145 1500
G 1700 0730
UA3 1400 0500

The following has been provided by Bill, W4ZV, specifically in respect of
our low band operations:

Short path bearings Sunrise (16 Feb) Sunset LP overlap
(@ 9M0C sunrise)
Magnetic North 8
Halifax VE1 358 1114 2143 58 min
Boston W1 5 1140 2217 24 min
New York W2 8 1148 2232 9 min
Atlanta W4 22 1221 2322 nil
Chicago W9 20 1245 2324
Dallas W5 34 1310 0013
Denver W0 34 1351 0037
Los Angeles W6 40 1437 0137
Seattle W7 32 1514 0133
>From the above, you can see the following general points:

1. Short path propagation to the Northeast USA after 9M0C sunset
will be very difficult due to the path's proximity to Magnetic North,
however there is some darkness overlap with VE1/W1/W2 before 9M0C
sunrise which will permit skewed and/or long path modes at this time.

2. The remainder of NA will only have a path after 9M0C sunset and
before US sunrise (from 1035 until US local sunrise). We expect that
stations in the Western half of NA will experience some very good
openings at their sunrise. Those of us in Eastern NA will have much
less probability of openings but nothing is impossible on 160!

Ah, but not all computer games are video shoot'em ups. I consider
EZNEC a very challenging game. Sometimes I even win. :-)

Nope, I said *condition* not train. Conditioned responses are easier
to generate when the subject isn't smart enough to figure out another
response than the one you want. If you've ever dealt with horses and
mules, you know what I mean. The mule is smarter, but it is much
harder to condition him to respond properly to your stimulus. In fact,
he's liable to give you a look which says, "you've got to be kidding"
before he kicks your fool head in.

Cross-posted to: rec.radio.amateur.misc,rec.radio.amateur.dx,rec.radio.info

SB DX @ WW $OPDX.342
Ohio/Penn DX Bulletin No. 342

The Ohio/Penn Dx PacketCluster
DX Bulletin No. 342
BID: $OPDX.342
February 2, 1998
Editor Tedd Mirgliotta, KB8NW
Provided by BARF-80 BBS Cleveland, Ohio
Online at 440-237-8208 28.8k-1200 Baud 8/N/1 (New Area Code!)

Thanks to the Northern Ohio Amateur Radio Society, Northern Ohio DX Association, Ohio/Penn PacketCluster Network, AD1C, WB2RAJ/WB2YQH & The 59(9) DXReport, K4TSJ, WA6AXE, AA8LL, EA4DX, F6AJA & LNDX, G4BUE & DX News Sheet, G3XTT, PA3DZN and 9A2EU for the following DX information.

4KA/4JA, AZERBAIJAN. The French DX Bulletin LNDX states that from January 15th through December 31st, the stations from Azerbaijan may use the prefix 4KA and 4JA instead of 4K and 4J. The Radio Club from Baku may use the 4K80ADR (Azerbaidjan Democratic Republic) for celebrating the country's 80 years of independence.

5H, TANZANIA. Dave Heil, K8MN, currently signing OH2/K8MN from downtown Helsinki, informed OPDX this past weekend his next assignment (and last before he retires) will take him to Tanzania. Dave and his wife Leila will leave OH-land in July. Then they will spend several months in the U.S. before they travel to Dar Es Salaam in early autumn. Dave hopes to receive a callsign ending with "US" or "MN" once again. This will be their fourth African assignment. Dave has been active as J52US, 9L1US and A22MN.

8P, BARBADOS. The "DX News Sheet" reports that Martyn, G3RFX, will be active February 2-16th as 8P9FX from Christ Church. Activity will be on CW/SSB, mostly 40 and 20m with some 17 and 15 meters. More information can be found at: http://ourworld.compuserve.com/homepages/g3rfx
QSL via home call.

9M0C DXPEDITION UPDATE. OPDX InterNet Subscribers will receive an additional bulletin containing the complete press release by the Chiltern DX Club (CDXC) and The UK DX Foundation. Meanwhile, the Spratly Islands DXpedtion is on track and will take place February 12-24th. Much of their equipment has already reached the Layang-Layang Island to await their arrival. It has been reported that Aki, VK2BEX, has had to withdraw from the operation, but was replaced with three operators. The new operators are: John Krzymuski, N2QW (ex-AB2EC); Jeff Morris, 9H1EL; and Kazuo

Ogasawara, JA1RJU. They will now have 13 operators. For updates, check out the WEB site: http://members.aol.com/spratly98

9N, NEPAL. Vladimir, RU6FP, is now active as 9N1FP for the next 4 months. His activity will be mainly on CW, and his license only permits him to be active on 20 and 40 meter. Check 14002 kHz around 1230z and 7005 kHz between 1200 and 1330z. QSL via RU6FP.

C6A, BAHAMAS. Look for Wade, AA8LL, to be operational as AA8LL/C6A from Crooked Island (NA-113), February 2-4th. Activity will be on the IOTA phone frequencies from 40-10 meters. QSL to home call, AA8LL.

CN, MORROCO. Look for F5LMK to sign as CN/F5LMK from May 9-16th. He will be active on SSB from 80-10 meters.

DXAC NEWS. The newly elected Great Lakes Division Director, Joe Falcone, N8TI, has selected Ted Pauck, K8NA, to replace Tedd Mirgliotta, KB8NW, as his DXAC representative. Ted is not new to the Committee. He was on the DXAC perviously (1991) before KB8NW and also served as DXAC Chairman. Tedd, KB8NW, will stay on in the Great Lakes Division as an Assistant Director.

FT5W/FT5X/FT5Z, CROZET/KERGUELEN/AMSTERDAM ISLANDS. Rene, FR5HR, currently active as FT5X/FR5HR from Kerguelen until the end of February, states he is not sure if he can activate the other place (FT5Z and FT5W).

FT5X, KERGUELEN ISLANDS. Elios, FT5XN, states he listens regularly for NA stations between 0300 to 0500z on 14209/14031 kHz and between 1300 to 1400z on the same frequencies. It was also mentioned that the Clipperton DX Foundation sent him an amplifier, and he should receive it soon. Elios knows, FT5X is really most wanted on the lower and WARC bands, that is why he promised to build dipoles for those bands as soon as possible. QSL via F6PEN: Ribes Gerard, 16 rue Viollet Leduc, 31100 Toulouse FRANCE.

J47, GREECE (Special Event Station). The Radio DX Group of Thrace will operate the special event station J47XCF from February 1-28th. This station will operate during the "Xanthi Carnival Festival 1998" which is part of the "Thrace Folk Festival 1998." This station will operate on all modes and bands. They report that contacts will be confirmed with a beautiful QSL card which will picture the official carnival poster of the city Xanthi.

KH4, MIDWAY ATOLL. The 59(9) DXReport states Ted, NH6YK, may be active from here March 18-29th as NH4/NH6YK (he now has an Advanced license).

KH9, WAKE ISLAND. The Dateline DX Association follows its September, 1997, North Cook operation by announcing a return to Wake Island (KH9) with dates on the island for February 26th through March 11th. This operation follows a successful 1996 Wake operation and its emphasis will again be on EU and the low bands. With upbeat conditions, other areas should enjoy good availability almost around the clock. They intend to complete the needs for those who may have missed it earlier.

Operators will be Tom K8XP (ZK1XXP, AL7EL/KH9, V7/AL7EL); Bob N2OO (9M6OO, V85OO, V85OM, XX9OO); N6MZ (VK0IR, ZK1XXP, SV5/N6MZ); and Bill N2WB (KG4WB). Four stations are planned with directional antennas for 10 through 20 and verticals for 40, 80 and 160. Special efforts on RTTY will be handled by N2WB. N1DG will again do the website.
This operation comes very soon after the North Cook operation and the chance to return was unexpected. Because they did not want to pass up the opportunity to again activate Wake, they are going under less than satisfactory financial circumstances. Any donations would be greatly appreciated and can be forwarded to: The Dateline DX Association, Robert Pond, 9 River Cove, Portsmouth, VA 23703. Calls to be announced at a later date. QSL to Robert Pond WA4YBV, 9 River Cove, Portsmouth, VA 23703.

NEW IOTA. Ibrahim, 7Z1IS, reports to OPDX that he will activate Tarut Island for the first time. His operation began on January 30th, but it will last until February 4th. Tarut Island is IOTA AS-111 and is located in the Arabian Gulf Group. He will sign 7Z1IS/P on the IOTA frequencies on 40-10 meters. There are two ways available to QSL: 1) via QSL Manager SM0OFG. 2) Direct to Ibrahim address: Ibrahim Saud, Po.Box 3361, Al khobar 31952, Saudi Arabia (IRC's are not accepted in Saudi Arabia, PLEASE use one green stamp).

P4, ARUBA. Operators Carl/AI6V, Rusty/W6OAT and Paolo/I2UIY, will be active from February 15th to March 15th, as P40K, P40V, P49V and P4/I2UIY. They also plan to be active in both the CW/SSB ARRL DX Contests and also the CQ 160 Meter SSB Contest.

QSL INFO AND NEWS.....
OPDX has received some conflicting reports on what stations Michel, HH2HM, is QSL Manager for. In OPDX.341, we reported Michel stated he was the QSL Manager for BA4TB and HH2PK. But according to Zlatko, 9A2EU, the only QSL route for BA4TB is via 9A2AJ. 9A2AJ has all the logs for Deal, BA4TB, and this is the only correct QSL route. Also, HH2PK states he DEFINITELY does not know F/HH2HM .. nor, does he have F/HH2HM as his QSL manager. It is suggested at this time to QSL directly via his Haiti address.

Roberto, EA4DX, states: "Now that 8Q7AA has finished its operations from the Maldives (Good job guys), just a reminder that there are a couple of thousand QSOs (2000) not requested in my logs for 8Q7XX last September. The 8Q7XX QSL is a full colored, "U.S. quality card". You can find it on the Maldives 97 Dxpedition site:
http://www.qsl.net/ea4dx/8Q7XXqsl1.htm
There is no backlog of QSLs, so same day return card is the average.
QSL guidelines for direct and E-mail bureau QSLs can be found in:
http://www.geocities.com/TheTropics/Shores/4909/8Q7XXqsl.htm
Log search on line at: http://www.qsl.net/ea4dx/8Q7XXlog1.htm
Any questions please E-mail me direct..." 73 Roberto Diaz EA4DX :-)
Roberto's E-mail address is: rdiazg@nexo.es

S7, SEYCHELLES. Kurt, S79MX, announced that he has obtained special permission to operate on 80 meters. This is only for two weekends in February. The following days have been authorized: Friday, February 13th from 0000z through Sunday, February 15th 2400z and Friday, February 20th from 0000z through Sunday, February 22th 2400z. The frequency to be used will be 3508 kHz (+/-). Using only 100 watts, Kurt will maximize his presence on 80m during these time frames to give as many as possible a chance to work this rare 80m DX.

SLIM REPORTED. The 59(9) DXReport states that Mehdi, F5PFP, reports he has confirmed with French Radiocom Service that no license has been issued to the 16 person crew on the 1997/98 mission to ST. Paul & Amsterdam Island. Therefore, FT5ZH is definitely Antarctic Slim!

T48, CUBA. Members of the No-Name Dx-Group (VE3ESE/Don, VE3NXB/Greg and VE3NQK/Gord), as well as many of the Santiago operators, will be operating as T48** (callsign not known yet) from Santiago de Cuba. Activity will be from February 27th through March 8th. Operations will include the CQ 160m Contest and the ARRL SSB DX contest. QSL via VE3ESE, with a SASE (CANADIAN POSTAGE ONLY) or SAE and a GREEN STAMP. All cards received via BUREAU, will be returned via BUREAU. Also, please check KWARC's web site at:
http://www.kwarc.org
Click on the special link, to see if your station was logged. Operators send out a special THANKS to the KITCHENER-WATERLOO AMATEUR RADIO CLUB, for their help and support.

TT, CHAD. Plenty of activity from this one! Eric, F5JKK, who was recently issued the call TT8JE, was heard on 17, 20 and 40 meters this past weekend. He expects to be there until March. QSL via F6FNU. Also, John, TT8JFC, was heard this past week on 20 meters (14213 kHz) from 2030 to 2330z. He was also heard on RTTY around 14082 kHz between 2330 and 0030z. QSL via WA4ZJB.

XU, CAMBODIA (Well this is an interesting one!). Harv, XU2FB, is now active as XUF2B (yep, this is not a typo!). He was heard on 20 meters signing this callsign. Also, according to the "DX News Sheet", Harv now has authorization for 30 meters and expects to be active on 80 meters soon with a new antenna. QSL via N4JR.

ZL7, CHATHAM ISLAND. It has been reported that Joe, YB1AQS, and a DL group (DL2OAP, DL3DXX, DL7UFN, DK1BT and DK7YY), will be active February 23rd to March 9th. They will use the callsign ZL7DK.

By writing this it very obvious that you do not know what you are talking
about so I think it is best that you stick to your CB and go find another
newsgroup to hassle.

If my plans work out with the Mexican government, I will be operating from XF4 in June, 1998. Just a "Heads Up".
The duration will be one week. I will be there on business and may not get as much On the air time as I would like.

My intent is to take a 5 band transceiver for 80-40-20-15-10.

I will keep you all posted. This news group. Things are quite Iffy at this point.

Hi, dear OMs

A Hungarian group of DXpeditioners, members of the Hungarian Pannon DX Club will operate from Ulan-bator Mongolia in May 1998. The team includes HA0HW, HA4GDO, HA6NL, HA7SK and HA7VK. It is planned to keep 2-3 stations simultaneously on the air 24 hours a day, to maximize band openings. All HF bands will be activated, on SSB, CW, RTTY and SAT. The callsign will be announced later.

The DXpedition is supported by the Hungarian Ambassador in Mongolia, the Hungarian radioamateur Society and the "Radiotechnika" magazine.

The DXpedition team includes experienced DX operators. The members of the expedition already operated from Cambodia (XU0HW, XU95HA, XU7VK), Iraq (YI9SK,YI9VK) Liechenstein (HB0/HA0HW/p, HB0/HA4GDO/p, HB0/HA6NL/p etc), ITU Geneva (4U0ITU) and numerous Greek islands including SV5, SV8, SV9.

The announcements are available at the Web page of Pannon DXC at

http://www.dunanet.hu/pannondxc/

The QSL Manager has not been pointed out yet, however the QSL policy will be the following: The direct requests with adequate return postage will be answered direct. The requests received without postage or via the bureau will be answered 100% via the Hungarian QSL Bureau.

The DXpeditioners would gratefully accept contributions from both individuals and clubs or firms. Contributors should contact Laci, HA0HW at

320. FCC Internal Security Problems

Newsgroup: rec.radio.amateur.dx
Date: 1998-02-05 00:00:00 UTC
From: flash <flash@news.mail.org>
Message-ID: <6bctr3$4l0$1@usenet88.supernews.com>
Source record: 30333

FOR IMMEDIATE RELEASE February 4, 1998
INFORMATION:
Goodfellows Net on
3901 kHz, nightly.

FCC OFFICIAL AND BETTER AMATEUR RADIO FEDERATION
OFFICIAL MAINTAIN AFFILIATION VIA
AMATEUR RADIO AND THE TELEPHONE

A FCC official and a Better Amateur Radio Federation official are exchanging information via amateur radio and the telephone.
William C. Houston, WD4LUQ, a Federal Communications Commission official assigned to the FCC's Powder Springs, Ga., office and James V. O'brien III, KD4CDB, chief of enforcement for the highly controversial Better Amateur Radio Federation, have been observed on several occasions conversing with each other on amateur radio repeaters owned by Houston.
O'brien is a high profile figure in the B.A.R.F's malicious interference campaign to drive amateur radio public service nets off the air. He is also a convicted felon, according to information supplied by the clerk of the court in Paulding County, Ga.
Houston and O'brien were tape recorded in Atlanta, Ga., last month by a ham radio operator who monitored their conversation on the 444.700 mHz repeater. They were making arrangements to exchange information via the telephone.
"I hadn't spoke to you in a while. I need to speak with you on the telephone," Houston is heard saying on the tape. "I heard from our friend again and need to talk with you. My telephone is open. My number is...you can call me now," O'brien replied.
O'brien has made several on-the-air references to an informant. They are followed by long-winded diatribes, supposedly based on the informant's information, about a former FCC employee's labor relations with Compliance & Information Bureau managers and alleged FCC enforcement actions against public service nets, according to the same Atlanta, Ga., ham radio operator who taped the conversation between Houston and O'brien last month.
"I was a union official at the now deactivated FCC Powder Springs monitoring station, and I find it astonishing how O'brien is cognizant of so many lurid details of my labor relations with Compliance & Information Bureau managers, most

of which involved highly confidential labor negotiations. They were facts which only a FCC official would have access to," said George Arsics, W2ZB, who resigned from the FCC in 1996 and is now a corporate communications analyst in Atlanta, Ga.

"I understand O'brien has taken the facts he has obtained about me from this informant, added several obvious falsehoods, and from what I've heard, he has created some comical but very untrue stories about me. I have no idea why I am a subject of his fantasies," said Arsics.
"I do notice, however, that O'brien tends to focus his hatred towards successful professionals and authority figures. These include Dr. Donald Scott, K1IDF, a college professor; Dr. Charles Schwartzbard, AF2Y, a retired dental surgeon; and Mick Slater, N9PGE, a retired police officer," said Arsics.
"There is in fact a private sector concerted monitoring effort, involving several entities, going on right now to uncover ethical and other improprieties inside the FCC," said Arsics.
"The FCC's Powder Springs office does not operate in a vacuum. It is subject to the same regulations and laws as any other federal place of employment. For far too many years, far too many things have been ignored or swept under the carpet away from public scrutiny. I have read transcripts of amateur radio conversations which contain references to CAD software, eight foot copper ground rods, lightning arrestors, ham radio and electronic equipment repairs, and many other interesting topics. When pieced together, they tell an interesting story," said Arsics.
In a recording of a December 7, 1997 conversation between Houston and N4YDX on the 146.895 mHz repeater at 2:41 pm, N4YDX requests Houston to make repairs on a piece of radio equipment. "You can take it to work with you next week," says N4YDX. Whereupon, Houston informs N4YDX that he no longer does that sort of thing at work. "Oh, I do that at home now," replies Houston.
A request for a statement from Houston regarding the FCC's relationship with the Better Amateur Radio Federation and O'brien in particular went unanswered, according to Oris Grim, N3CND, who requested the information.
In a tape recording obtained from an Alabama source, Houston is heard on his repeaters describing numerous classified security details of the FCC investigation which solved the well-known Roanoke Phantom Air Controller case. He goes into detail, for the benefit of another ham operator, how the FCC utilized information and surveillance to identify and locate the perpetrator. (No excerpts from this recording are quoted here, due to the extremely sensitive nature of the

information.) The FCC utilized highly sensitive investigative techniques and sophisticated equipment in this 1993 case which identified and located a disturbed individual who was intentionally interfering with radio transmissions between passenger aircraft and air controllers in Roanoke, Va.

"The FCC had, and probably still has, some of the laxest internal security I have ever seen. FCC employees receive virtually no training in security awareness and protection of restricted and classified information. I saw sailors court-martialed for much less serious security violations than this Roanoke incident. What is even more appalling, FCC managers seem to never follow up and investigate their internal classified security leaks," said Arsics, who was a cryptologist and communications security expert in the U.S. Navy, prior to going to work for the FCC.

In a recent conversation on a repeater monitored and recorded by a Tennessee ham radio operator, Houston discusses a sophisticated piece of analytical equipment used in FCC investigations. "Oh yeah, we [FCC] have one of those... (withheld for security reasons)...low-powered devices...to test it," said Houston, during a conversation with WJ9J.

"During my FCC employment, I discussed the need for communications security training many times with my superiors. My suggestions were met with apathy every time," said Arsics.

When Houston placed an uncoordinated repeater on 146.895 mHz, a controversy erupted with the Southeast DX Association over control of the input frequency. The DX association had been using the frequency for several years for DX announcements, according to information from that organization.

"During routine monitoring operations at the now deactivated Powder Springs monitoring station, we would often intercept Houston arguing on the air with the Southeast DX Association over control of his uncoordinated repeater's input frequency. The transmissions were emanating from Houston's office, located next door to the Powder Springs monitoring station, during official duty hours while Houston was on the public payroll. Several internal security reports were made to FCC managers, but apparently nothing was ever done, because the transmissions, during duty hours, continued unabated for years," said a former FCC employee.

"To my knowledge the FCC has never given any frequency to Mr. Houston or any ham. For him to cause a stir [over his uncoordinated repeater] and claim a frequency is in poor taste. But as an FCC employee this should be a fireable offense, certainly in violation of FCC and ITU regulations," said Dave Thompson, K4JRB. "[a friend of Houston's] told a Southeast DX Club member that Mr. Houston did all of his

hamming from the FCC monitoring station."
"I recall this controversy. Houston kept harassing the Powder Springs monitoring staff to enforce some nonexistent FCC rules against the Southeast DX Association. However, we viewed the matter as a serious ethics problem for the FCC, one which Houston should have never created. To make matters even worse, Don Taylor, the former Powder Springs Engineer-in-Charge, turned a deaf ear to the entire controversy, preferring not to deal with it at all. This left the monitoring staff with no direction from FCC management and Houston continuing to demand some unjustified action from us against the Southeast DX Association. I think a senior monitoring staff member finally told Houston he had better extricate himself as gracefully as possible from the entire matter and stop demanding unjustified enforcement action from the monitoring staff at Powder Springs. I don't think Houston ever did follow this advice," said Arsics.
Repeater ownership, especially such a highly controversial repeater, by a FCC official and Houston's association with O'brien raise some serious ex parte questions, according to a legal source familiar with the situation.
Houston lists an official U.S. government E-mail address at the FCC in his Buckmaster data base information and was specifically asked if this was for official or personal use. No response was ever received from Houston concerning this matter either, according to Grim.
"A visit from the media or Billy Tauzin's staff might entice the FCC to comment on ethical and other improprieties," said one Cobb County, Ga. citizen at a recent local political meeting.
W.J. "Billy" Tauzin is chairman of the U.S. House subcommittee on Telecommunications, Trade, and Consumer Protection. His subcommittee exercises congressional oversight of the FCC.
O'brien's address in the FCC data base is not his current mailing address, according to Bryan Johnson, a citizen's band radio operator who has monitored O'brien's radio mischief for several years. A requirement that amateur radio operators keep the FCC informed of a current address where they can receive mail is clearly stipulated in part 97 of FCC rules and regulations.
Houston, who resides in Dallas, Ga., owns and operates a total of three repeaters in the Atlanta, Ga., area. Their output frequencies are 146.895, 224.880, and 444.700 mHz, according to information found on the internet.
O'brien, who resides in Acworth, Ga., was convicted on June 16, 1993 in the Superior Court of Paulding County, Ga., of three counts of violation of the Georgia Controlled

Substance Act, GA Code 16-13-30. He subsequently served time in prison, and his parole was completed in June of 1997. His case is assigned number 93-CR-000158, according to the county clerk of the court and public records.

Feb. 6, 1998 Zulu

At 0520z or so the first QSO's for KA4IST/KH5, Mark, on Palmyra
were made with a VK3 (Frank), KH7R (Ken) and KH7U on 20 meters.

Mark is still setting up and should be back on 20 meters around
0630z to 0700z on 14.195 Mhz. I don't know if he has a lowband
antenna up yet other than the 160 dipole that Chuck, N4BQW, left
behind. Conditions from my QTH weren't very good (barefoot).

Hopefully after tomorrow's sked we will have a better idea of
his ops and freqs schedule.

I will leave posting to Tony or whomever was appointed the job!

Thank you all!

Aloha, 73

Kimo Chun, KH7U.

Why CW? Why does a cardiologist study the rest of the body? It separates the men from the boys. Anyone can learn code. It keeps ham radio separate from CB!

Hi Al: Don't take the what's below personally, as it responds only to your
contentions.

1. Apples and oranges: Cardiologists are not Amateur Radio Operators.
Cardiologists start out as plain MDs (no, not *that* MD!), then
specialize. Hams start out "plain," then "specialize" also.
2. Boys can become cardiologists. Boys can be Amateur Radio Operators.
Men can be Amateur Radio Operators. Boys can become men. Men can
become boys. Moot point anyway: Men and boys are both male.
However, sometimes boys behave better than the so-called "men,"
who are very often "men behaving badly" on the bands. But: Your point?
The implication is that somehow Morse code ability makes one greatly
superior to those who have no such ability.
3. Not everyone can learn the code. But then, some, though not everyone,
have the awareness of what other folks sometimes have to deal with.
4. Evidence of the "filtering" radio-racism: "separate from CB"!
One listens to certain bands and wonders -- if one can "hear." I do hear,
even though I'm mostly deaf. I *can* hear enough, with help, to get
by. And what I do hear in the ham bands in spots makes CB look tame.

In any case, IMNSHO, Morse code TESTing is no longer justifiable as a separate
pass-fail testing requirement for HF frequency access licensure.

331. CHINA HAM NEWS 2/4/97: BY1QH EME Schedule

Newsgroup: rec.radio.amateur.dx
Date: 1998-02-07 00:00:00 UTC
From: Xiaopeng Rick Niu <xn6@columbia.edu>
Message-ID: <6bhqdjjkl1@apakabar.cc.columbia.edu>
Source record: 30344

CHINA HAM NEWS 2/4/97: BY1QH EME Schedule

Courtesy of Lasse (BY/)SM0KAK & David BZ1BM
Tsinghua University Amateur Radio Club, Beijing, China

* * * * * * * * * * * * * * * *

To members and friends of BY1QH.

You are all most welcome to participate in the following activity!
Please contact David BZ1BM or Lasse SM0KAK if you plan to show up.
Note that our cances of making a EME QSO before 1630 UTC (0430
local time Sunday morning) are not too good due to local QRM.

BY1QH WILL BE QRV ON 144 MHz ON SATURDAY, FEBRUARY 7
This is the first time we are QRV in a EU window except for last
ARRL contest. Make sure you are the first in your DXCC to work BY
on EME! So far only SM, W and VE have been worked from BY.

UTC
1130-1230 EME random.
1230-1300 TEP sked SSB 144.136 MHz with VK6XLR
1300-1330 EME sked with PE1LCH, PA2CHR tail end. QRG unknown NW.
1330-1600 EME random
1600-1630 EME sked with PE1LCH, PA2CHR tail end. QRG unknown NW.
1630-1800 EME random. From 1700 our local QRM is less bad!
1800-1830 EME sked with PA2CHR. QRG unknown NW.
1830-2035 EME random
2130-2230 CQ DX 1827 kHz +/- QRM, 400 W & dipole at 30 magl

During these hours we will be QRV on +86-10-90854674.

We will not accept more skeds (PE1LCH and PA2CHR have lent/donated
major parts of the station). On the other hand you are welcome to
send an e-mail to era.sm0kak@memo.ericsson.se telling that you
will be calling us, and what time periode you plan to be QRV. This
might help us to pick up your call sign. Will anybody be able to
be QRV in the first hour (1130-1230 UTC)? The moon will be below
the horizon in most parts of EU and NA then.

All RANDOM EME is on 144.136 MHz, using 2 minute timing, BY1QH
transmits in the "first" period. Please spread out +/- 1 kHz!!
(We will not move our TX)

We have lots of birdies and local noise. The QRM situation is also
not stable. If you spread out it makes it much more likely that
one of you picks a clear QRG! If you hear us and call us, please

do NOT give up even if we give no sign of copying anything! Keep
on calling. This goes for all stations, even if you run several kW
and lots of aluminium! Suddenly the QRM drops and we can copy you.
Stations like W5UN KB8RQ and VE7BQH have been totally impossible
to detect, and then after hours of calling and listening the noise
goes down. Also average size stations have a chance if you can
copy us. During the ARRL contest we copied 4 yagi stations
running 1.5 kW.

Station improvements since 1997 are:
Improved elevation readout at low elevation angles
New RX filter 250 Hz (500 Hz B4), and new PA.

Other equipment same as before:
IC-706 Mk2
SSB electronics pre-amp 0.8 dB NF in mast head
4x9 el Vargarda, total gain 17.7 dB
Stacking loss 0.5 dB, feeder loss 0.7 dB
QTH: LOC ON80DA
Tsinghua University in Beijing
73 ES CU VIA EME
Lasse (BY/)SM0KAK & David BZ1BM

http://www.horizon.nl/~tdekkers/by1qh/index.html.

I was amazed at the last wave of spam that Oris Grim,N3CND,and George Arsiccs,W2ZB falsely posted over the newsgroups before xmas last year. As you all know now they are at it again. I have attatched the reply I received from P.C. Chen after I forwarded the latest lie-filled post from these two ham radio anarchists. As you can see,P.C. Chen could care less what kind of activity originates from his server,slander,spam or criminal threats are ok by him. His total lack of responsibility as a server owner will now contribute to Oris Grim posting untrue idiotic spam to all the amateur groups,as he is successfully doing now. When this intensifies in the future as I am sure it will,you have P.C. Chen to thank. I wish the newsgroup administrators,the amateur radio community, and netizens all over the world good luck with these pathological lying sociopathic anarchists.

That's nice. Unless you are completely moronic, his newsgroup posting
has nothing to do with our service. In fact, he posted those articles
through his dialup account. Now get off the crack you've been smoking
and go bully someone more naive.

Randy Aooney mode on...

Did you ever wonder why Len Anderson constantly refers to his military past?? Isn't odd that he continually brow beats us with his historic exploits in the Army and his amazing feets of HF prowess at taxpayers expense, yet whenever someone else cites the same, he's the first to declare it irrelevant and not germane to the topic at hand. Why is that? Let's take a look at some of his accomplishments that I have assembled on my desk. HMMmmmm doesn't seem to be much of anything. Why is that?? Maybe he's irrelevant and not germane to the discussion at hand.

Did you notice that whenever a nocoder screws up, nothing is said by his cohorts?? Witness the witless Code Sucker/Code Boy/ M@S@ fiasco. Why is it Carl and Len and Drew aka CB Dimbulb haven't stomped him into the dirt?? Could it be the NoCode Double Standard really exists?? HMMmmmm

Why is OK for a NoCoder to forgo stating his real name or callsign yet when a procoder does the same he's accused of many things?? HMMMMMmm

Why won't Drew admit he's CB Rambo?? Is he afraid that he might receive the dreaded gun pointing at him JPG?? Hmmmmm

This has been Randy Aooney, good day

I doubt that he is witless, but he obviously does not command the Engish
language very well at all. Could it be that we have no idea what he is
really trying to say? Come to think of it, I don't recall seeing you guys
tearing each other up either. What's up with this double standard?

350. February Propagation Forecast

Newsgroup: rec.radio.amateur.dx
Date: 1998-02-09 00:00:00 UTC
From: ids@nol.net
Message-ID: <34df835c.18830723@news.nol.net>
Source record: 30363

PROPAGATION - by AD5Q HOUSTON, TEXAS -- FEBRUARY 1998

January brought us two expeditions that were challenging to work from North America. Laos was difficult from the eastern US, while the Maldive operation proved difficult from the west. This is because the northerly paths were darkened by the winter night. The best opportunities were found on long path, where signals propagate nicely across the Antarctic summer.

At sunspot peaks the nightpaths open back up on 20 during February, but we are not there yet. Fluxes are in the 80's to the low 100's, and this is enough to enhance nightpath conditions on 40 over the high latitudes. At sunspot minimum the MUF drops below 7MHz in the winter, closing the path to Europe. At current levels this path is usually open through the evening and we can follow the sunrise peak as it sweeps across Russia and Europe. We also have excellent 40 Meter openings to much of Asia at our own sunrise peak.

20 is at its best after sunrise and around sunset, with a nice path to Africa much of the afternoon. The path to Europe is open during the day, but this path is better at higher frequencies. Openings on 15 include much of Europe. These DX windows are of short duration, especially to the eastern regions. A more optimum band for daypath work into Europe and Asia is 17 Meters.

Seasonally, we can expect improvement on 15 over the next several months as daylight advances toward the north pole. We know that increasing solar flux levels will also help us, but currently they are not rising very fast. With enough solar activity 15 meters is most awesome in late spring, but I don't think we will see these conditions this year.

Seasonal peaks on 10 always seem better in the fall than in the spring. Last fall we did have short openings to Europe and Japan, but conditions probably won't be any better this spring even if flux levels are slightly higher than in the fall.

20 should open up for nightpath work during April, and we will find much improved polar openings as the equinox approaches in March. For now, 40 will provide the best worldwide coverage at night. Windows to remote parts of the world will open on 20 in the morning and late afternoon along the grey line. For daypath work, watch 17 & 15. For a challenge, try 12 & 10.

352. HELP!, Power meter problems URGENT science fair help

Newsgroup: rec.radio.amateur.dx
Date: 1998-02-10 00:00:00 UTC
From: John Lauber <jlauber@execpc.com>
Message-ID: <6boe5q$pkb@newsops.execpc.com>
Source record: 30365
Cross-posted to: aus.radio.amateur.wicen,git.radio.amateur,mcgill.amateur-radio,rec.radio.amateur.antenna,rec.radio.amateur.boatanchors,rec.radio.amateur.digital.misc,rec.radio.amateur.dx,rec.radio.amateur.equipment,rec.radio.amateur.homebrew,rec.radio.amateur.mi

I need urgent help to get me off on my science fair project.

I have been doing an experiment to test the resistance of different materials to an airborne signal, but I need serious help on the apparatus. First I tried a baby monitor and used an amplified microphone to pick up variances in the volume of the signal (audible), then measured the output of the microphone on a voltmeter. A very simple and indirect way of doing it. It worked, but it didn't seem to pick up enough change, and my preliminary testing resulted in less than desirable results. Second, I tried measuring the strength of a CB signal with a wattmeter, but the wattmeter had to be wired inline between the transmitter and antenna, not what I wanted to test. Is there any piece of equipment that measures the strength of an airborne signal? Am I setting this up right? (see diagram below)

```
------------------- | | --------------
| transmitter | | Block | | receiver |
------------------ (lead etc.) ---------------
```

Is there a wattmeter or other piece of equipment that will take the place of the receiver and give me a reading of the power of the signal, either precise or relative? I need some form of project by 2/17/98, and a good one by Feb. 23. I urgently need any help you can give me. Thankyou.

Please respond to jlauber@execpc.com .

Sincerely,

Dan Lauber

Sorry this text is translated with the computer

Hi,

I would build for my ship (steel sailboat) one SSB antenna . On the
eightstay I have not good experiences.
It gives in the ship accessory SSB antennae those are approx 4 to 6 m of 1,6
to 24 MHZ long the entire maritime mobile service field and for the entire
maritime mobile service field
Now my question:
Since these antennae cost approx 600 DM would like to build themselves.
Where I can find a manual?

Use a field strength meter to measure the signal. I think Radio Shack still has an SWR meter that has a field strength position with a small antenna. You should also be aware that the experiment will be hard to control if you are just placing a piece of material in the signal path. Signals will bounce around the room, reflecting off walls and such, and find paths between the transmitter and receiver other than the direct one which you are trying to attenuate with the material. The best way may be to place the transmitter inside a box made of the material.

Good luck.

*** The Daily DX ***
======================
Volume 2 Number 26
February 10, 1998
Edited by Bernie McClenny, W3UR

----------------------------------------------------------------------

Headlines

----------------------------------------------------------------------

If everything goes as expected the first wave of the multi-national
DXpedition to Layang Layang, in the Spratly Islands should arrive
today. The first group will set-up the equipment and will start
operating on or before 12 February, which is when the second group
will arrive on the island. Suggested frequencies are as follows:

Band SSB CW RTTY
---- --------- ----- -----
160 1842 1824
80 3795/3802 3502
40 7080 7002 7035
30 10102
20 14195 14022 14080
17 18145 18072 *
15 21295 21022 21080
12 24945 24892 *
10 28495 28002 28080
6 50145 51102

For further details about this major DXpedition see The Daily DX
issues Vol. 2 No. 1, Vol. 1 No. 85 and the 9M0C homepage at
http://members.aol.com/spratly98/index.htm

A log server has been set up for those who wish to check to see if
they are in the log. Stations may have to wait 24 to 48 hours after
making their QSO in order that the log information has been uploaded.
Due to the high expected demand two URLs will both contain the 9M0C
logs http://www.logiciel.co.uk/9m0c.html and
http://www.goldtel.net/spratly/

The DX News Sheet reports that the Malaysian Amateur Radio
Transmitters Society has requested 9M7 (HF & VHF) and 9W7 (VHF)
prefixes for future operations from the Spratly islands.
```

Aki, JA5CUX, will be active from I.T.U. Geneva as 4U1ITU on 20 and 21 February. He plans to be mostly on CW. QSL via the bureau or to International Amateur Radio Club, P.O. Box 6, CH-1211 Geneva 20, Switzerland.

A group of Italians will be active from zone 23 in Ulan Bator, Mongolia starting on 7 April. Nicola, I0SNY, the group leader will be joined by Oboardo, I0TIC, Mauro, I1JQJ, Massimo, I8NHJ, Piero, IK0AEH, Francesco, IK0FUX, Elvira (YL), IV3FSG and possibly others. The group will have at least two complete stations on the air 24 hours a day for one week. Activity is planned for 10 through 160 meters including CW, SSB and RTTY. The Italian group will use special callsign JT1Y from the Mongolian Radio Sports Federation club station JT1KAA. QSL via I0SNY, Nicola Sanna, Str. Gualtarella 8/M, 06132 S. Sisto - PG, ITALY.

Ray, AA6EW, will be active from Great Abaco (IOTA NA-080), in the Bahamas from 1 to 14 March. Look for him to be active on 10 through 80 meters on CW and SSB. He plans to participate in the ARRL SSB DX Contest on 7 and 8 March. QSL via AA6EW.

LA7AT plans to operate from Barbados from 23 February to 2 March. He will take a TS850 and use a dipole and G5RV mostly on 20 and 40 meters. Look for him on both CW and SSB. His call sign will be assigned upon arrival. QSL via LA7AT.

Tom, K6CT, will operate the ARRL CW DX Contest as TI5N from Costa Rica. He will be operating from the QTH of Carlos, TI5KD. QSL via TI5KD.

Kris, KA2OIG, will operate from Morgan's Cay, Honduras as HR6/KA2OIG from 13 to 26 February. He will be running 4 watts (QRP) on the lower end of 30 meters only. QSL via KA2OIG.

QSN

4S7EA - SRI LANKA - Ernest had a good signal into the US East Coast yesterday at 23:15Z on 3800.

9G5VJ - GHANA - Andy showed up on 1828 around 23:15Z and was QSX on 1838 until about 01:00Z. Later he showed up on the same frequencies at 05:50Z. QSL via G4ZVJ.

AD6BQ/KH3 - JOHNSTON ISLAND - Bob continues to show up on 14205 around 05:30Z.

BD4ED - PEOPLE'S REPUBLIC OF CHINA - Ed can often be found on the low end of 30 meters CW around 23:30Z. Usually working Europeans.

C91LCK - MOZAMBIQUE - Franco is now back on the mainland and was busy on 15 meters CW from 08:00 to 09:30Z and

again around 14:30Z. QSL via I4LCK.

KA4IST/KH5 - PALMYRA ISLAND - Mark started on 7154 and moved to 7158 from 09:15 to 13:40Z. QSL via AC7DX.

ST2SA - SUDAN - Dr. Sid showed up yesterday on 7050 between 20:00 and 21:00Z.

VK9NA - NORFOLK ISLAND - Has been active on 40 meters CW around 13:00Z. QSL via DF3VN.

IOTA

The following IOTA stations were active yesterday.

IOTA	Call	Freq	GMT	IOTA	Call	Freq	GMT
EU-004	OH0RJ	7008	2213	NA-180	V31NX	14260	1945
EU-016	9A2GF	14261	0734	NA-180	V31UY	21260	1904
EU-146	PA3BDQ	1830	2135	OC-023	AD6BQ/KH3	14205	0617
NA-106	KP2/KTG	14181	0103	OC-042	DU4DX	3798	1430

Yang, BD7JA, reports he will visit Hai-Nan Island (IOTA AS-094) from 12 to 16 February and plans to be on the air on 13 and 14 February. He will operate from Hai-Kuo City and will be assisted by SWL BG7-4-004 who is the only SWL on the island. Yang will use an Icom IC-706MK II and a dipole. Look for BD7JA/7 to be using 7050, 14260 and 21300. QSL via P.O. Box 1713, GuangZhou, Peoples Republic of China.

Hamid, 9K2HN, reports the IOTA DXpedition to AS-118 (see Vol. 2 No. 8) has been postponed due to the current situation in the gulf area. When things settle down a new date will be announced.

Amateurs from Brazil will activate Frances Island (IOTA SA-067) from 16 to 24 February. The group will include Vieira, ZX0Z/PY1LVF, Pete, ZZ0W/PY1NEW, Lima, ZZ0Z/PY1NEZ and a few other PP1's. They will be active on all bands from 10 to 160 meters on CW and SSB. Suggested frequencies are as follows:

SSB 1850, 3755, 7055, 14190, 14222, 14260, 18128, 21260, 24950, 28360, 28460, 28560, 29000
CW 1835, 3530, 7030, 10115, 14040, 18098, 21040, 24920, 28040

QSL via home calls or to PY1 QSL bureau.

Steve, N9CK, is currently operating from Providenciales (IOTA NA-002) as VP5/N9CK and will remain active through 16 February. During the WPX RTTY Contest he will use VP5CK. Before and after the contest he will be on CW and RTTY on all bands. QSL via N9CK.

IOTA frequencies -
CW 28040 24920 21040 18098 14040 10114 7030 3530
SSB 28560 28460 24950 21260 18128 14260 7055 3765

The receiver itself is usually the most sensitive field strength meter
you can find. The problem is to find that portion of the circuit that
is a good indicator for received signal strength. If you have enough
power available to use just a simple 1N34 diode detector with a
sensitive voltmeter, that would be the simplest way to go. The small,
battery operated digital VOM's that can be purchase as cheap as $15 or
less, will have a sensitivity of a few millivolts. If your
transmitter is capable of 5 watts, for example, you will have no
trouble getting good deflections with a small whip antenna (a foot or
two long), a 1N34 diode and the millivoltmeter range of a VOM.

Gruss Gott, Herr Woellenweber,

It was your name that caught my attention. Years ago I worken on a
project for the US Government. That project included some large
antennas built in Germany. The antennas had the appearance of a
knitting machine - hence they were called "Woellenweber".

>I would build for my ship (steel sailboat) one SSB antenna . On the
>eightstay I have not good experiences.
Ich verstehe nicht "eightstay". Das muss eine falsche Uebersetzung
sein.

I know of amateurs who have used the "backstay" as an antenna. (d.h.,
the steel cable that runs from the Stern (of the boat - nicht Sternen
wie im Himmel) up to the top of the mast. They have reported very
good results. The steel hull of your boat will enhance a "ground
plane" vertical. All you need is a proper tuner or transmatch to
match the impedance of the backstay to your transmitter. You should be
able to operate on any frequency from 6Mhz through 30MHz.
40M, 30M, 20M, 17M , 15M, 12M and 10M. It is not a sufficient antenna
for lower frequencies unless you provide some capacitance or "top hat"
loading. (d.h. viele quadratmeter auf der spitze).

>It gives in the ship accessory SSB antennae those are approx 4 to 6 m of 1,6
>to 24 MHZ long the entire maritime mobile service field and for the entire
>maritime mobile service field

>Now my question:
>Since these antennae cost approx 600 DM would like to build themselves.

A good tuner will cost less than $140 for power under 300 watts. The
insulation of the backstay from the mast and the hull is mechanical
problem.

> I know of amateurs who have used the "backstay" as an antenna. (d.h.,

Yup, the computer got that wrong, and I'm pretty sure he did in fact mean `backstay'. The backstay is called `Achterstag' in german, and `acht' is german for the number `eight', which is how I suppose the rather linguistically challenged virtual babelfish that did the translation came up with `eightstay'...

[Auf deutsch und in k"urze: Das Achterstag hei"st `backstay' auf englisch]

As an aside, I once took a paragraph from a german newspaper and munged it through the translator that's available on alta vista, translating back and forth between german and english (yes, I was bored). Surprisingly, the iteration actually converged and resulted in something that vaguely resembled modern poetry, but didn't have very much in common with the original passage. Anyway...

People, people.....PLEASE.... This group should surely represent the spirit
of amateur radio first and foremost!!
Don't slam ... or tease .... or tear at people who come here for help with
what they are doing for fun.

Please think about sending a helpful or friendly reply (or none at all) and
read it yourself to see if you can figure out what it might sound like to
others who are here in good spirit.
The written word is very different from verbal communication and what is
said with a lift or a smile may seem hurtful on the page.

Anyway sorry to seem so serious .... This group really is a lot of fun.

Thanks , 73's John KD0OM

Tsinghua University Amateur Radio Club, Beijing, China

* * * * * * * * * * * * * * * * *

BY1QH RESULTS ON 144 MHz EME, SATURDAY, FEBRUARY 7

SUMMARY:

RX and TX performance much better than expected!
Got QRV 45 minutes later than planned. SRI!
Very low local QRM all the time!!! UFB WX.
WKD I2FAK SM2CEW PE1LCH PA2CHR HRD 9H1CD,
Sked 1600-1630 continued until 1728.
PA died at 1900.
We detected only 2-3 unidentified callers.
Seemed like very few called us.....?
Very satisfied any way!

DETAILS:
P=Planned activity
H=This is what happened
UTC
P 1130-1230 EME random.
H 1215-1230 EME random. SRI ABT late QRV!!
P 1230-1300 TEP sked SSB 144.136 MHz with VK6XLR
H 1230-1300 TEP sked. NIL HRD in both directions.
P 1300-1330 EME sked with PE1LCH, PA2CHR tail end. QRG unknown
H 1300-1330 EME sked with PE1LCH. Too weak signals to copy.
P 1330-1600 EME random
H 1330-1600 EME random. WKD I2FAK 1356.
Called 9H1CD 1443-1518, NC.
WKD SM2CEW 1552.
P 1600-1630 EME sked with PE1LCH, PA2CHR tail end. QRG unknown
H 1600-1728 EME sked with PE1LCH, PA2CHR tail end.
The signals were improving all the time, so we kept
on going. At 1700 we just needed the "Q" in our
call sign. Completed with PE1LCH at 1711.
Completed with PA2CHR at 1728.
P 1630-1800 EME random. From 1700 our local QRM is less bad!
H 1730-1900 EME random. From about 1814 there was an
unidentified station calling, possibly sending:
R, N, 52, B, U, and L ...? At about the PA
died....QRT

P 1800-1830 EME sked with PA2CHR. QRG unknown NW.
P 1830-2035 EME random

P 2130-2230 CQ DX 1827 kHz +/- QRM, 400 W & dipole at 30 magl
H 2140-2235 CQ 1827 kHz/1826.6 kHz, QSX 1829. WKD only BV and
YC.

COMMENTS:

VY SRI ABT getting QRV 45 minutes late! Some preparations took
longer than expected.

The local QRM level was so low that we had to make sure several
times that the pre-amp was OK....! UFB! I even switched on the
built in pre-amp in the IC-706. The Chinese new year is VY
important in BY. The university was on holidays, so we guess all
local QRM sources were switched off. Even the paging transmitters
seemed to affect us less than expected, even in daytime.
We were VY happy and encouraged by being able to work "average
size" PE1LCH and hear 9H1CD, after having to struggle with big
guns like KB8RQ, W5UN and VE7BQH.

We got the impression that few stations were QRV since PA2CHR
reported good signals from us during our QSO, also we think I2FAK
called us a 2nd time giving us 529 report, and SM2CEW seemed to
have had a very solid copy of us. He also found our sked QRG
144.120 MHz easily. We even made a few phone calls to SM to try to
stir up some activity, but soon the PA died!! Thanks any way to
SM4SJY who we think made several phone calls for us.

Especially happy about being able to work PE1LCH and PA2CHR who
both contributed with VY important equipment to BY1QH!!! (It is
just too bad that we could not give both of you a "first"!)
Too bad about the new PA going QRT! We really hope we can repair
it. The old PA is still in BY, but it was not in the shack, so we
could not switch.

Next activity is not yet planned, but it is likely to take place
within 3-6 weeks.

Pictures, sound file, log, and other info ABT BY1QH can be found
on: http://www.horizon.nl/~tdekkers/by1qh/index.html
The BY1QH home page is made and hosted by PA3DSS.

Station improvements since 1997 are:
Improved elevation readout at low elevation angles
New RX filter 250 Hz (500 Hz B4), and new PA (presently QRT)

Other equipment same as before:
IC-706 Mk2
SSB electronics pre-amp 0.8 dB NF in mast head
4x9 el Vargarda, total gain 17.7 dB
Stacking loss 0.5 dB, feeder loss 0.7 dB

Greetings Christoph !

I sincerely appreciate your learned comments. I am surprised at
myself that I didn't go to the trouble of looking up the word for
"backstay". I certainly would have recognized the problem had I done
so.

Interesting comment on the experiment. I tried that once with a
letter that I had written. I plugged into an english to spanish
translation program and then fed the result back through its spanish
to english counterpart. I was absolutely amazed at how well it did,
The one thing that got screwed up was some reference that I had made
to a golf ball. Otherwise it was almost perfect.

I hope the gentleman with the boat can avoid the DM 600 antenna - I
doubt if was any good anyway - Hi.

Cross-posting is against the charter of the rec.boats.cruising newsgroup. I understand that the original inquiry was from a non-English speaking person, and I appreciate that we should all be polite. I agree with that. However, as this subject is a radio subject and rbc is a boating newsgroup, I think I can speak for many of us here is requesting that this thread not be cross-posted to the rbc group. Thank you.

The origional enquiry was a marine band radio enquiry, is that not
allowed in rec.boats.cruising? You should have removed r.b.c from your
cross post so that any responses (inc this) would have missed your
newsgroup.

> allowed in rec.boats.cruising?

Sure it is. We talk about SSB and radios often. What we object to is cross-posting, and this thread (now threads) is a good example of why. These "debates" stray from the subject of rbc and end up mixing us up in all kinds of things from other groups. Cross-posting is a violation of the charter. Very simple.

> You should have removed r.b.c from your
> cross post so that any responses (inc this) would have missed your
> newsgroup.

Maybe. I thought about it, but I decided to leave it on so others could pick up on the idea. It usually takes one or two messages for the group to get on top of something... But basically you are right, it should be removed to stop the cross-posting. BTW, my point was not meant to be unfriendly, just to try to keep the situation from escalating.

Sandro's no troll, but he's been trying to sell all this heavy
commercial equipment for the last few months.
You'd think that would tell him something about the prices he's asking!

Why even bother posting such stuff like this in this newsgroup? Do you really think anyone here could afford such gear? Maybe you should contact some small countries.....

hmmm... humor... well I dunno... Benny Hill I could take... but Mr. Bean..
well... I think it's a conspiracy.. at first just a glimpse here and there
(mostly on PBS).. but now a major motion picture.. released into the USA! An
obvious evil attemp to warp the minds of our children...

I say it's time to retaliate in the "humor war" let's send over re-runs of
Gilligans Island and Gomer Pyle USMC to Europe!!!!

The Benny Hill show in the US was the variety like UK version editted to
a "Laugh In" pace. The two show versions were quite different. FOr
those in the UK, it turned Benny Hill into Kenny Everett.

Even none English speaking Europeans find Benny Hill funny, is it too subtle for the US or something?

Why was Mr. Bean such a big succes in the USA? It's quite similar, it would have been better with Hill's Angels ;-)

Now Walt... you know that's not true... Americans are quite comfortable having sex... so long has each partner has a recent blood test, notarized complete sexual history, industrial grade condoms, the lights are out, blindfolds are worn, and it's between the hours of 11:30pm and 11:45pm... there... see we're not uptight at all!

I am trying to find some big-time powerline noise in my neighborhood, and
am trying to build a direction finder antenna but cannot find parts. I need
the following parts:

35 uuF midget air capacitor
.005 uF capacitor
.1 uF capacitor
150 K ohm resistor
1N34 diode and a
2N372 RCA transistor

Is there any builders out there that has any or all of these parts?

I suggest craig take a listen between 14.175 and 14.350.
He just might be surprised what some are using.

Since I read most of the posts, and found that nobody was giving information you would find helpful, and since I have no idea personally where to look, I would suggest a library. They often have many volumes available for all sorts of ham equipment, and electronic equipment in general.

Good luck.

Good Morning, Andre,

If I correctly understand the prefix "back" in a nautical context, it
would mean "forecastle" or "foc'sle" as we say. If that's the case
then wouldn't the german word Backstag translate to Forestay?
Continuing with that thought, then it's no wonder that languages can
become so confusing. Anyway, makes a nice conversation item.

418. I LOVE A MYSTERY airchecks, and a question.

Newsgroup: rec.radio.amateur.dx
Date: 1998-02-13 00:00:00 UTC
From: Brian Christopher Misiaszek <bmisiasz@julian.uwo.ca>
Message-ID: <34E4D59A.2FD2@julian.uwo.ca>
Source record: 30282

Hi there

I'm a big fan of the Carlton E. Morse radio serial, I LOVE A MYSTERY (known as ILAM to its initiates). It's considered by many (including myself) as one of the greatest radio shows of all time. It ran initially from 1939-1944, then again from 1949 to 1954.

Alas, most of the ILAMs have vanished! Only four sort-of intact serials still exist in a complete form; THE THING THAT CRIES IN THE NIGHT, BURY YOUR DEAD ARIZONA, TEMPLE OF VAMPIRES and BATTLE OF THE CENTURY. There are perhaps a dozen fragmentary single episodes in addition to this, but that's it! All those gorgeous, shudder-pulpy stories, gone forever into the ether and the ionosphere...

This brings me (finally!) to the reason I'm writing. It's to pick your collective brains (especially those of the older DXer's who can you remember ILAM when the show first ran in the early 1950s). Is there anybody, who, when you were a teenager who actually taped such shows off the air for future enjoyment? Do you know if your father or grandather did just this and has some old tapes or wire recordings of I LOVE A MYSTERY gathering dust anywhere?

There exists one sorta complete ILAM story (THE HERMIT FROM SAN FELIPE ATABAPO) from a radio fan who did some airchecks of the show (ie. taping off the radio). Another couple of episodes from the story I AM THE DESTROYER OF WOMEN also exists. It's from a few persons like these that some of the existing fragments exist).

Thanks for any help you can give me.

::Brian::

>
> If the german word Achterstag is the backstay in english, how do you
> call the german Backstag ?
>
Hmm. From an illustration in a german-language book, I derive that the
`Achterstag' is a single stay that runs down from the top of the mast to
the stern along the centerline of the boat. `Backstagen', of which there
are two, run down sideways, aft of the shrouds, but still forward enough to
be in the way of the boom. Therefore they are kept slack on the leeward
side and need to be adjusted each time you change tack. I guess they're
not very common any more (probably because modern rigs leave room for a
fixed backstay).

As I said, this is just what I'm gleaning from a little figure and may
not be accurate in general. Also, I don't recall the english term for
`Backstag' (`running backstay', perhaps?)

Hello Steve,

I read your post with intrest as pertained to Len A. mostly because I too am Military and knowing he is too, wondered many times what all he was into, but unlike you seem to have been exposed to, I find very little from Len at all. I see more jabs at his Military duty from others than I ever see from him. Just guessing but do you guys really envy that duty so much you have to put it down to feel better?

There are a few here that need very much to remember who said what. Myself, I have a very weak Computer, and Browser and may have missed many of Lens posting of his life in the Military, and if so, feel mucho bad for that. My speed? I'm up to 45wpm on this thing and leveled off.

Regards

Ed

I am a Ham Radio Operator - over 30 years. I'm also a boater.

Why on earth are you people posting to all these different news
groups? Just because you can?

How about a little consideration, please...

Not everyone (maybe not anyone) on rec.boats.cruising cares about
humor in the UK, especially as interpreted by Hams...

Thanks guys,

Yes, Masa has a problem putting English words to his Japanese thoughts
but when he makes it I usually agree with him. Unlike the other side,
giving someone the benefit of the doubt just seems like something a good
operator would do. I am a little miffed at not being included above as
being one sided even tho I don't think I am.

Take Care Jim,

Ed

The foc'sle is a storage or berthing area towards the bow of the
ship. It's the worst possible area to live, for the motion is
quite violent. Read Dana's "Two Years Before The Mast" to get
a better idea of shipboard living conditions (in that region
of the vessel).

Actually, the worst part of the ship to be berthed in is near the Chiefs
mess after "Chili" night... ;)

The back part of the ship is generally referred to as "aft" or "stern"...
old sailing ships used to have a "quarterdeck" which was generally an
elevated deck in the aft of the ship often where officers were berthed.

Not envy, ED, just sheer boredom in having to read Geezerson's continually
posts as how HIS military career is of such great importance to the discussion
and how any others military service is absolutely less than significant to the
same. It seems that Geezerson's service did nothing to contribute to
anythijng, as it was served in that war torn theater now as Tokyo during the
post Korean conflict era. I would suggest scanning DejaNews and you'll see.
Geezerson's continually referrals to a 1950's military service, he insistance
that his 1974 patent, etc make him the very essence of technological knowledeg
when it comes to the discussion. In that regard, I'd take Carl's refernces
over the Geezerson's, for the simple reason that I know Carl's employer and
they usually don't hire slouch's (sic).

Has anyone successfully wired an MFJ-1278 to the dataport of a Kenwood TM-V7A? The Kenwood is so vague in the pin descriptions as to be useless!

Could someone provide the pin connections, please? I'd like to be able to use my local DX-cluster.

Thanks,

Mike - W0TMW

438. Fishing

Newsgroup: rec.radio.amateur.dx
Date: 1998-02-14 00:00:00 UTC
From: kh2d@kuentos.guam.net
Message-ID: <6c4ng4$b0p@lehi.kuentos.guam.net>
Source record: 30302

I was reading a book the other night, and I came across an interesting story. The following was written by Don Newlands, VE3HGN, and originally published in January 1985 Radiosporting. Thought some other people migh enjoy it:

My Granddaddy used to fish for food, my Dad fished for fun, and I don't fish at all. I buy fish at the fish store, along with most other folks. No fuss, no muss. Evidently, we three had something in common: we all wanted fish. Granddad would stand in the icy water, casting, reeling until his limbs went numb; one man in harmony with nature. My memory of him is a bit misty. He didn't talk much, but seemed confident and content.

My dad, on the other hand, had an expensive yacht, filled with gear. He bragged about his catch and had a lot of big ones stuffed and varnished which he would point to with pride.

Now I haven't time for all that crap. I'm prepared to stand a few minutes in line at the fish market and I can either eat it or mount it, but for anybody to freeze his butt in water? Or lay out big bucks for a boat just to fish from? Today's he's hopelessly out of touch.

Now you may ask what this has to do with ham radio? Simple. My Grandpappy was an original DX'er, wire antennas, 20 watts, and a spark that could set a house on fire. My Dad was a Dx'er with stacked antennas, 12 beverages, phased verticals, transmission lines as thick as a wrist. 2 meter spotting nets, DX Cluster and all. And he kept the family up all night with his yelling and screaming.

From my perspective, this all sounds primitive and disorganized. I prefer a simple little tribander at 40 feet and a low band trap dipole with the apex at 35 feet. All I do is give my call (or just the suffix - I know it's not legal, but it's in) to the list-taker, and in a minute, it's all over: "last heard you were 55, rifle shot, bang bang." All I do then is listen to the MC's "Good contact." No fuss, no muss. Oh, my certificates (all framed, of course) are the same as theirs. Now that's what I call progress!

CQ DX, CQ DX is a call of the endangered species. Now it's "put me on the list.". Now, how do you get on the list? Ya' phone 'em, that's how! And while you're on the phone, ask them if they have any fish.....

That's fair Steve. If you don't like the military then you don't. But
it would be a mistake to dismiss what they did for Amature Radio.

Having no idea how old you are, I will insult your intel by telling you
of all the WWII Comm Equipment made avail to people to play with.
That's a lie, I will only mention a few. ARC family radios from
aircraft many hams turned into pretty good stations. Even the Propeller
Pitch control motors were used to rotate beam ant. Dynamotors allowed
early mobil use of military radio equip. Many folks got their first
taste of Communicating without a phone line in the Military and went on
from there to Hamdom where they preserved and added to the hobby for
others to use.

I'm not one of those flag wavers that tells you I saved your country or your way of life, but I do know what I and others have done and I need nothing from you nor others with your attitude regarding ex military. It is not unusual to find folks bashing the military and it usually stems from a bad experience by that person. I don't know if that fits you and Its not pertinent, but what I do or say may be tempered by 20+ years of military duty, and if you have a problem with me, it's me, not the military you should be addressing.

You know something Steve, I don't know if Len A. knows Code or not, I do know he doesn't think it belongs in any testing for a Ham ticket to HF. Ask me if I know code and I will have to say no because I haven't used it for 30 years and I don't think it belongs in testing. My father didn't and my Mother didn't, even tho she did like it.

I have been around Ham Radio all my life and I have an opinion for which I currently don't need a license for and I will give it when I feel like it. I have a problem when someone comes here and begins to select what is pertinent or not pertinent to the discussion. You tell me what you think and I will tell you why and when I dissagree, but when I do dissagree, it's not because you are white, male, single, left handed, curley haired, doctor, cab driver or ex military, it will be because what you have offered is not agreeable to me. No more and no less.

If that is not ok with you tell me now and I will refrain from reading any more posts by you. I wouldn't wish to offend you by responding, I am MILITARY you know.

Regards

Ed

and......AN/GRC-5, AN/GRC-9, AN-PRC-9 used in Vietnam are now
contributing to increase amateur radio activity.......

what is next?

My military career lasted only one year, from 1966 to 1967. We
had some American rubbish (now surplus) radio equipment which
replaced very much better German equipment which we must not use
because it was made the by bad "Germans", and all such equipment
should be destroyed, it was even thought to be BAD conduct to
say that "Germans made valuable equipment", although some radio
amateurs found some sources and had great pleasure from using
GER... equipment.
The only benefit from my military career was morse training and
amateur radio license (we were trained to work 18wpm).

Try Mouser Electronics. They have a pretty good inventory and they have no minimum purchase order. 800-346-6873 or website, www.mouser.com. And their prices are not too high. Joe, w4vl.

I don't know what the communications laws are in France, but the same
problem exists here in the United States. Several Frequencies on 75 and
20 meters have this problem. As 10 meters opens up, the problem will appear
there as well. Not much you can really do about it.

I have great respect for MOST of those affiliated with the military. Obvious Lennie isn't one of them. I have little respect for those that think they are above others based upon their life experiences, including those who think that they're code knowledeg puts them in a position of esteem.

BYW< i still (although no longer wear), the braclet I bought in the 60's for the Airforce Captain who was shot down and is still listed missing in action

You have to foegive me, but what exactly does war surplus have to do with the price of coffee?? I can go to my local military installation tomorrow and buu 486 computers for 10 cents per pound. Are you inferring that because of this the military is responsible for the explosive growth in home computers. All you shown is that people are resourceful when it come to "one man's junk is another man's riches"

Which is fine, but unlike you, LLennie insist that his military career is basis for all, yet any other person's career is just so much poop. I'm beginning to think that Geezerson has a hard-on for the Navy and Marines. Seems whenever someone else mentions their military training, suddenlly it's inapproprite to the dicussion at hand, yet the geezer feels that his time spent in the relative safety of the Ginze makes him an expert. That's my point. Why is OK for his elderliness to spout his military wisdom, yet no one else???

> If that is not ok with you tell me now and I will refrain from reading
> any more posts by you. I wouldn't wish to offend you by responding, I
> am MILITARY you know.

I am not offended bu the military, just by those little armchair generals who feel that their military careers are of such great importance that they continually fall back on them, yet not allow the same of others

450. SU2MT QSL???

Newsgroup: rec.radio.amateur.dx
Date: 1998-02-15 00:00:00 UTC
From: George <sp2brz@pit.gda.pl>
Message-ID: <34E73E69.2FC@pit.gda.pl>
Source record: 30314

Hi there,
Can anyone inform me if knows sure way to get QSL from SU2MT? I think
about 80 meter QSO on 26 November '95. I'd like to rich 200 countries
level on that band but still I DON'T have a card from Egypt. I've sent 3
letters (3 x SASE) to him but no any reply up till now. The last letter
was sent as registered!
Thank you for any help de George, SP2BRZ.

Hello Jeff,

I'm perfectly aware of what the foc'sle is, having spent some time on
sailboats as well as 41/2 yrs in the U. S. Navy. I don't understand
what your point is. My discussion refers to the meaning of the german
prefic "back" in the context of Backstag, which I believe is the
german for "forestay". Perhaps my meaning wasn't clear.

14.1 and up is the international voice band, though it is now being
used more and more by packet, etc.

As you may also know, there is some contrivercy between quebec and the
rest of canada. Quebec wants to be a separate country. perhaps the
french station, assuming it is a ve2, is simply using his language on
the international part of 20 meters.

SB DX @ WW $OPDX.344
Ohio/Penn DX Bulletin No. 344

The Ohio/Penn Dx PacketCluster
DX Bulletin No. 344
BID: $OPDX.344
February 16, 1998
Editor Tedd Mirgliotta, KB8NW
Provided by BARF-80 BBS Cleveland, Ohio
Online at 440-237-8208 28.8k-1200 Baud 8/N/1 (New Area Code!)

Thanks to the Northern Ohio Amateur Radio Society, Northern Ohio DX Association, Ohio/Penn PacketCluster Network, WB2RAJ/WB2YQH & The 59(9) DXReport, K4UVT, N4RN, W4WX, WD4JNS, KZ8E, WZ8D, KJ9I, KP2BH, EA3NY, F5CCO, F6AJA & LNDX, G3HSR, G4BUE & DX News Sheet, GM4FDM, HB9BRM, IK5MDF, LU1DZ, RN6BN, SM5MX, VE3NQK, YS1FEA and ZS5BBO for the following DX information.

3C0, PAGALU ISLAND. The "DX News Sheet" reports that the proposed March multi-national DXpedition has been postponed due to the armed coup in Equatorial Guinea on January 20th.

3X, GUINEA. Steve, GOAEV, will be active from February 16 through March 31st, and possibly for six weeks after Easter while he is on a work assignment. Activity will be on CW/SSB, mainly on 10 and 6 meters and then the other bands. QSL via home call.

4S7, SRI LANKA. Mario, HB9BRM, will be active from here for about three months beginning March 3rd as 4S7BRG. QSL via bureau to HB9BRM or direct (Callbook 98).

7P8, LESOTHO. Look for John, KA3DBN, to be active sometime between March 1-19th. Activity should be on all bands CW/SSB and RTTY while he is based in South Africa. Also, the "DX News Sheet" reports that John will be active from South Africa and possibly from A2, Z2 and 3DA when he travels there. QSL via K3BEQ.

8Q, MALDIVES. Lorenzo, IK5MDF, states he will be active from here May 2-8th. His call sign will be 8Q7DF. His activity will be on 80-10 meters from Alimatha Island (IOTA AS-013). For more information and updates, please visit the following Web site: http://www.qsl.net/ik5mdf

9K, KUWAIT. The special 9K2F DXpedition has been postponed due to the current problems in the area.

C6, BAHAMAS. It has been reported that "Wild Man" Joe Pater, C6AJR/W8GEX (ex-WB8GEX), and John Walker, C6AIE/WZ8D, are going back to the Bahamas again February 25th through March 4th. John has indicated they had such a great time in early December working the Ten Meter Contest on all the bands (which included 400 QSOs on 6 meters), that they wanted to get back as soon as possible. Their main event will be the CQ 160 meter SSB Contest. The call for the contest will be C6AIE. They will be active on all bands including six meters (looking for E, TEP, F2, propagation or whatever six meters will deliver. Sorry no 2 meters this time. John states he is still waiting for QSL cards from the printer to mail out from their last trip. He requests, "Please be patient, it always takes longer for picture QSLs." Jim, KB8YKR, has already mailed out all non SASEs and bureau cards up to date to the QSL Bureaus. John has about 800 cards with SASEs that will get the new picture QSL cards when they are received. If you would like to get one of these, please send your cards direct to John Walker, WZ8D, 1930 Meredith Dr. Loveland, Ohio 45140-7216. Include a S.A.S.E for U.S.A. and outside U.S. include at least 1 IRC and S.A.E. All cards for C6AJR will go to W8GEX, (ex-WB8GEX), 1894 Old Oxford Rd. Hamilton, Ohio 45013.

EK, ARMENIA. "The 59(9) DXReport" states that Sergei, EK4JJ, is now active as 4K1700JJ to celebrate 1700 Years of Christianity. QSL via GW3CDP.

EP, IRAN. Look for Rino, EP3GI, to be active until May. SSB activity is mainly on 40 and 20 meters. QSL via EA5XV. Meanwhile, EP2MKO continues to be active on 20 meters CW (around 14004 kHz) between 1330 and 1500z.

FS5, SAINT MARTIN. Eddie, EA3NY, will be active in another ARRL SSB Contest, this time as FS5PL. He will be here from March 4-9th. During nights he will be looking for Europeans on 40 and 80 meters. He will also try RTTY during some part of the evenings before the contest and during weekends, working as many U.S. stations possible for ARRL SSB Contest. He will be active on all bands during the contest as a Single Operator High-power. His anntenas will be an A4 (4 elements from Cushcraft) with 40 meters kit, dipoles for 80 and 160, they will not be very high. Also see NP3 down below.

FT5Z, AMSTERDAM ISLAND. Mehdi, F5PFP, reports he has permission to land and operate from here next Decemeber. He will be able to stay for about one month. Mehdi states this operation will be a DXpedition, and he will do nothing else except operate. Activity will be on all bands and modes, with beams and amplifier.

HP, PANAMA. Gerard, F2JD, has returned (as February 15th) to Panama as HP1XBI for about one and one half months. After that he will be in Honduras for one month as HR5/F2JD.

HK0, SAN ANDRES & PROVIDENCIA. Silvano, KB5GL, will operate from IOTA NA-049, Providencia, February 26th through March 2nd (maybe longer), as KB5GL/HK0. Activity will be on SSB only, suggested frequencies are (+/-): 3792, 18125, 14180 and 14260, 21260 and 21280, 21310 (for Generals), 24940-24945 and 28460 kHz. QSL to Ron Lago, AC7DX, POB 25426, Eugene,

Oregon 97402 USA.

HR6, ROATAN ISLAND (Honduras). A team from the Florida Contest Club will operate from Roatan Island (IOTA NA-057) from March 3-10th. Their main event is the ARRL DX SSB contest using the contest callsign HR6/W4OVU. The operators are: Bruce, HR6/W4OVU (QSL via W4OVU), and Julio, HR6/WD4JNS (QSL via WD4JNS). They plan to operate on 80-6 meters, CW, RTTY, SSB and RS-12 satellite.

KG4, GUANTANAMO BAY. You still have time to work the group that went here to be active in the 4th Annual World-Wide RTTY WPX Contest. Operators Bill/KG4GC(W4WX), Rusty/KG4AU(WV3N), Jan/KG4QD(K4QD), Joyce/KG4OS (WA4OMS), Wayne/KG4WD and Clayton/KG4PK should be active until the 20th. The team planned to be active after the contest on all modes and bands. QSL KG4GC Contest QSOs to: Bill Gallier, KG4GC/W4WX, 4094 Sandy Run Drive E., Middleburg, FL. 32068. Please include a SASE. Bureau cards will also be answered. Non-contest QSOs go to home call. Any comments or questions can be sent to: w4wx@bellsouth.net

LU1ZC NEW DEPARTURE DATE. The latest departure date for LU1ZC (operating from Decepction Island) by the Argentine icebreaker "Almirante Irizar" is March 8th. Then the last day of full operation will be 2/3 days before the departure date. The team will be able to operate a full 48 hours during the ARRL CW Contest.

NP3, PUERTO RICO. Eddie, EA3NY, will visit here before the ARRL SSB Contest (Also see FS5, above). He will be active on 40 and 80 meters during the nights for Europe. The days he will be here are February 28th through March 3rd.

QSL INFO AND NEWS.....
Bob, K4UVT, reports to OPDX that the logs from the ZF1A 1997 CQWW CW DX Contest operation are now available online on the Web at the URL address http://www.qth.com/k4uvt/index.htm
The interactive logbook is provided as a service to allow amateurs to search for their call in the logs to verify their QSO(s) prior to mailing a QSL request. All QSL requests for the 1997 ZF1A operation are via K9LA at his CBA.

QSL requests for ZF2RF QSOs should go to Bob's (K4UVT) new address:
D. R. Dorsey, Jr., PO Box 977, Charlottesville, VA 22902-0977
Prior addresses and the Callbook address are no longer valid.

Edwin, ZS5BBO, QSL Manger for Ian, ZD9IL, who is still very active from Tristan da Cunha, reports QSL cards for contacts after August 18th can't be processed as log sheets still haven't arrived. He requests that DXers PLEASE be patient as QSL cards will all be answered as soon as the log sheets arrive. He does appologize for the delay. All QSL cards are to be sent to: Edwin Musto, P.O. Box 211032, Bluff, South Africa, 4036. Please enclose 2 IRC's.

PLEASE TAKE NOTE! Dick, C6A/N4RP, would like to remind everyone that the correct and only QSL route for contacts made with him for the past

several years is: C6A/N4RP. PO Box 030323. FTL, FL. 33303-0323. It seems that a false QSL route has been given over the internet for all of his operations from C6A. He is a regular there in most of the major contests as C6A/N4RP.

QSL YS1X ONLY TO OH2BU. Raymundo, YS1RRD, states he has been receiving QSLs for YS1X and reports he is NOT handling the QSLs or the logs for the recent YS1X operation.

DO NOT QSL! Bruce, G3HSR, states he has been getting QSLs direct for PQ8MM. He is NOT the QSL Manager for PQ8MM. Only QSL direct to: Mario, P.O. Box 533, 68906-972 Macapa - AP, Brazil.

RM6, RUSSIA (Attention Prefix Hunters!). Sam, RN6BN, reports to OPDX that a team of Shakhan Contest Club members will be working in all 1998's contests (SSB/CW/RTTY) as RM6A. This is a good chance to get a new prefix for the WPX award. QSL via RW6AWT, bureau or direct to: 350062 (no name, just a number was given), P.O.BOX 600, Krasnodar, Russia

SPECIAL EVENT. The "Cadena el Conquistador, Inc (NP3P) and the Yaureibo Cultural Center of Vieques, Puerto Rico, will be active from Vieques Island (IOTA NA-099) celebrating the 21st Vieques Cultural Festival. The special event will be operational from 1200z April 17th through 2000z on the 19th from Fort Count of Mirasol. The suggested operating frequencies will be: 28350, 21350, 14300 and also activity on 40/80/160 meters. The first 500 contacts with confirmation will receive a 8x11 certificate. The QSL adress is: Cadena el Conquistador, Inc., PO Box 161, Fajardo, Puerto Rico 00738.

T48, CUBA (Update). The No-Name Dx-Group will be using T48RAC during their trip to Santiago de Cuba from late February and early March. They plan to use this special callsign during the CQ 160 Meter and the ARRL SSB DX Contest. QSL via VE3ESE. Also, check the Kitchener-Waterloo ARC's (KWARC) Web page to see if you are in the log. A special link will appear on the web page. Go to: http://www.kwarc.org

T8, BELAU. David/KJ9I, Rudolph/NF9V and John/NZ9Z plan to be active from here December 8-17th, as T88II. Activity will be 160-10 meter with an emphasis on the topband. QSL via KJ9I (contributions appreciated): David Schmocker, N7298 County Trunk Highway F, Oconomowoc, WI 53066-9040 U.S.A.

TXK8, NEW CALEDONIA (NOT a misprint! Attention Prefix Hunter). The "LNDX" reports Eric/FK8GM, Franck/FK8HC and Alain/FK8FI will use the special callsign TXK8DX (that is T X K 8 D X) during the WPX Contest. The TX is a special prefix for French overseas territories and the K is for New Caledonia. The team plans to use a 4 element delta loop for 10m, 3 element for 15m, 3 element for 20m, 2 elements for 40m, dipoles and a square for 80m, L inverted for 160m. QSL via WB2RAJ.

V2, ANTIGUA. Operators GM3NIG, GM3UTQ, GM3COB, GM4FDM (all who recently operated from St Kilda EU-059), GM0UKZ, GM0NAI and maybe GM0GAV will be active during the upcoming IOTA Contest as V26VG. The group also hopes to be active from Antigua a few days before and after the contest using

the callsigns V2/homecalls. There will be activity on the WARC bands before and after the contest. QSLs for the Dxpedition should go to GM4FDM either direct or via the bureau. Requests for bureau cards may be obtained via E-mail from GM4FDM at wylie@scotsboy.sol.co.uk

XA, MEXICO (Update). We reported in OPDX.343, that the Texas DX Society would be active from here. The TDXS will now join with the Club de Radio Afficionados del Norte de Tamaulipas Asociacion (CRANTAC) and will activate XA5T on all bands for the ARRL DX CW contest. QSL to N5TU.

XV, VIETNAM. Anders, SM0ORV, has recently been licensed as XV7SV in Hanoi (not to be mixed up with XV7SW). He has rather modest antennas, and would be happy to QSO anyone who can pick up his signals. As the rule is in Vietnam, he has been assigned a set of fixed frequencies: 3526, 7026, 10135, 14212 and 21235 kHz. QSL via his home call SM0ORV, where he will handle all cards when he returns to Sweden in June.

XV7SW WRAPUP. For those who had a chance to work Rolf, SM5MX (aka XV7SW), he has sent OPDX this personal note to all that he made a contact with:
"Hi fans,
Having served in Hanoi, Vietnam, for four years, I have now returned to my native Sweden. You can still obtain QSL cards for contacts with me as XV7SW by writing to my home address: Rolf T Salme, SM5MX, Korpstigen 5 B, S - 135 51 Tyreso, SWEDEN or via my QSL manager SM3CXS, either directly or via the bureau.
Summing up my operation from Hanoi, it was a particular thrill to be able to activate 160 meters and offer XV on Top Band to those in need. When operating from the center of a big city, it certainly helps to have an embassy garden at your disposal for suspending elevated radials.
During my stay there, I got a lot of assistance from a lot of people overseas. Special thanks go to my patient and faithful QSL manager SM3CXS, to W8ZF who furnished us with his DXBASE Log Program and to K5ESW and JE1JKL who provided me with a lot of advice and any hardware or software I needed.... 73 de Rolf SM5MX/XV7SW"

YS, EL SALVADOR. Federico, YS1FEA, reports to OPDX that due to the lack of YS stations on the air (currently ONLY about 10 stations active on HF) three Salvadoreans stations will be operational every night on 7055 kHz from 0200 to 0330z. Operators are: Federico/YS1FEA, Roberto/YS1CQ and Oscar/YS1SH. QSL all three to: PO Box 517, San Salvador, El Salvador, Central America.

Robert,
the word back for the forcastle is also known in germany. BTW the backstag
is not the forestay (Vorstag in german). If a boat has backstags it has two
of them. They go from the mast backwards to either side of the boat, while
only on one side, the leffward, is tight.
I hope this description helps to locate that stay.

Andre

I've just learned, that in a dictionary for sailors these two stay are called this:

Achterstag=(standing) backstay
Backstag = running backstay

Don't assume that because I happen to have been Military that I will
tell you everyone that wore a uniform was somehow better than everybody
else. Not that I'm any judge but there many that were scum of the earth.

BTW Sir, I would thank you for your rememberance of fallen soldiers and
would also remind you that hundreds of thousands of the 60s people did
the same while professing hate for anyone in uniform not missing or
dead. I would like somehow to thank them too but don't know how.

I suppose I could say the same for old Auto parts too, but we were talking about Comm Gear and that kind that more nearly resembled Radio gear. Give it a try and you will probably be able to see how this new found supply of cheap equip may have helped at a time when some folks were less than well off. Now you may decide this made no contribution to Ham Radio and so be it, but that makes it just an opinion just as mine is and up for debate on that issue, rather than "does it apply to the subject. Yea, I know. Opinions are much like athletes foot, sooner or later everyone will have some.

I hear you say this friend, but again, where or when did I miss it? Look I realize you can't be this adamant without some cause, I just haven't seen it here and I care only about what is here not what you or others find in DejaNews. I can't keep up with what is said here much less running off to DejaHear to try and find something on someone I can use to dissmiss him/her here.

>

>

Let me tell you how I feel about that stuff. I have done things that I
am proud of and some I'm not. The same is probably true of every one
that ever served. I don't care what a mans rank is, if he is the only
one at war he is nothing. The fact that Len or I or anyone else was
military has nothing to do with this subject, but things learned there
and brought here do and that you should be debating.

Have a good day

Cross-posted to: rec.radio.shortwave,digital,rec.radio.amateur.digital.misc,rec.radio.amateur.dx

Latest version of Morse Decoder MRP37[3] is officially released !

MRP37 is a software-based Morse decoder developed as an MS-DOS
application by Polar Electric Engineering. It uses the audio output of
your radio receiver connected to your computer's sound card to decode
the CW audio signal to ASCII text.
A comfortabe CW-send function is included!
Now you can have a QSO at CW speeds of 20 wpm or more and make even more
contacts during CW contests! And by careful listening, we think you'll
notice an improvement in your own code copying ability.

For more info and instant download and test of MRP37[3] go to
http://members.tripod.com/~PEeng/morse

For additional information send mailto: POLAR.Electric@cww.de

Hey, I LIKE this idea of calling tubes "pipes." Those Italians are
pretty slick.

Take that and put it in your 4-400 and smoke it. (c:

Voyager 1 becomes most distant human-made object in space

NASA RELEASE: 98-30

In a dark, cold, vacant neighborhood near the very edge of our Solar System, the Voyager 1 spacecraft is set to break another record and become the explorer that has traveled farthest from home.

At approximately 5:10 p.m. EST on Feb. 17, 1998, Voyager 1, launched more than two decades ago, will cruise beyond the Pioneer 10 spacecraft and become the most distant human-created object in space, at 6.5 billion miles (10.4 billion kilometers) from Earth. The two are headed in almost opposite directions away from the Sun.

"For 25 years, the Pioneer 10 spacecraft led the way, pressing the frontiers of exploration, and now the baton is being passed from Pioneer 10 to Voyager 1 to continue exploring where no one has gone before," said Dr. Edward C. Stone, Voyager project scientist and Director of NASA's Jet Propulsion Laboratory (JPL), Pasadena, CA.

"At almost 70 times farther from the Sun than the Earth, Voyager 1 is at the very edge of the Solar System. The Sun there is only 1/5,000th as bright as here on Earth, so it is extremely cold, and there is very little solar energy to keep the spacecraft warm or to provide electrical power. The reason we can continue to operate at such great distances from the Sun is because we have radioisotope thermal electric generators (RTGs) on the spacecraft that create electricity and keep the spacecraft operating," Stone said. "The fact that the spacecraft is still returning data is a remarkable technical achievement."

Does it QSL?

Dear OM`s
more than 6400 QSO`s were logged during my stay in Marocco from 27.1.98 to 10.2.1998. Due to terrible situation with electricity in my hotel /shortly 380V instead of 220 in **** Hotel La Kasbah, Agadir/ the power supply of my TCVR and amplifier were damaged. I had to stop the operation 4 days before leaving to Europe.

Fore sale...

Manufacturer
BK Precision

Model
830 Autorange Capacitance Meter

Price: $100.00

Description
4x6x1, accepts standard banana connector leads, have slotted contact for those tiny tine ceramic disc caps. Runs off batteries or wall adapter.

Auto range with LED range indicator, LCD display, have fold out legs for bench use.

History
Bought new back in 1989 when I was into high end car audio. Used for approximately 1 year tuning filters (part time on weekends, less than 30 hours total).
Cardboard box is wasted, and can't find meter leads (probably with my VOM), and the wall power adapter has been long gone(probably used for some other gadget).

If interested, please email me at the following

NOTE I hate spammers, so if replying, please remove the c from my name in the reply address.

My exerience is mainly 2m/70cm cw:
it depends on the BFO pitch, it sound like listening to white noise
spectre, but it is limited to few kHz. If you have passbandtuning you
may vary the center passband pitch frequency.

I have worked some 6m aurora, but it is 'more' pure tone on this band,
and as such easier to work ssb-aurora than on the higher bands, on 2m
ssb-stns sounds like whistling - stronger or weaker - to each other.

Stongest aurora ever (as I remember it) was in july 1981.

> Larry ve3fxq

That has nothing to do with Quebec Mr VE3, the station in question at 14.1225 is French (as in France) and 14.1 and up is not used by packet but by phone SSB. Maybe you should check your dial calibration or frequency display.

Quand a CN8GI, c'est pas les amerloques et autres anglophones qui vont vous rï¿½pondre. Les amerloques ne descendent pas si bas et les totos comme celui qui a rï¿½pondu lï¿½ haut ne comprennent rien au Franï¿½ais la plupart du temps. La station en question ("l'ami Pascal") est trï¿½s connue chez tous les francophones et occupe cette frï¿½quence (avec son QRM) depuis au moins 5 ou 6 ans.

Il n'y a qu'ï¿½ tourner le bouton et le laisser appeller ses FO et cie.

Salut
Madjid aka VE2GMI

480. FULL INTERNET Access VIA Packet Radio??

Newsgroup: rec.radio.amateur.dx
Date: 1998-02-18 00:00:00 UTC
From: moss.i@virgin.net
Message-ID: <34eb0068.23239366@news.virgin.net>

To all that can offer assistance

I believe there are things called packet radio internet gateways. What i want to do is to have FULL Internet access (not just EMAIL) through packet radio, via the said gateways so as to do away with my ISP which costs me £12/month, and the PHONE bill, which I think is a disgrace that we have to pay for. We pay for calls to the Internet in England!!!!!!

PLEASE NOTE:-If you have never heared of an packet radio internet gateway, DONT reply to me saying youve never heard of it, and its not possible, because I jolly well know it is possible, this would obviously be the first time you have heard of it, so DONT bother to reply to me. If you DO know what I am talking about, I would very much welcome your input.

I need to know what equiptment I will need to do this, the cost, and if there are local gateways operating in the MHZ freq. range that will be able to cope with a high speed packet radio modem (56K + baud), in the NorthWest region of England. From reading stuff off the net it wont cost a fortune to implement all this. I apparently need a TNC (Terminal Node controller), radio, amplifier, and Antenna, and anything else you might think I should need. Read some info about JNOS too, presume its possible to run TCP/IP over that, with WIN95, and all the traditional internet application programs running all above that, FTP, email, Netscape browser etc etc etc. I hope to run all that little lot from a 486AMD5x86-P75 ,256K cache,16MB, WIN95, which will more than meet the needs of the Packet radio interface.

If you can help would appreciate it

Cheers

Ian

Only problem I see is your expectation of 56K access over the amateur VHF
bands with (ordinary?) radios. NOT easily possible, if at all. You'd need a
broad band type transmitter receiver (2) and that won't be as easily obtained.
Most high speed amateur user operations are at 9600 baud now... that's about
the limit of ordinary ham gear... and far too slow for regular internet web
access.

Another short point. In a sailing vessel, the foc'sle (derived from forecastle?) was also the most likely downwind point in the vessel. Therefore, the least desirable real estate, especially after six weeks at sea hauling a cargo of goats.

First of all, you got the name wrong. Packet radio internet gateway
has traditionally been a message/e-mail gateway only. On the packet
radio side it has traditionally been AX.25, and it routes messages
back and forth to the Internet. What you want is a TCP/IP connection
over packet radio. It has been done in various areas.

>PLEASE NOTE:-If you have never heared of an packet radio internet
>gateway, DONT reply to me saying youve never heard of it, and its not
>possible, because I jolly well know it is possible, this would

Well, you don't get to say the term right, so some people might get
confused.

>I need to know what equiptment I will need to do this, the cost, and
>if there are local gateways operating in the MHZ freq. range that will

Again, you didn't get the term right. What you need is a UHF or
higher frequency if you want to operate on amateur radio bands. And
just to be sure, check with your own country's band plan as I am not
familiar with yours.

>be able to cope with a high speed packet radio modem (56K + baud),
>in the NorthWest region of England. From reading stuff off the net it
>wont cost a fortune to implement all this. I apparently need a TNC
>(Terminal Node controller), radio, amplifier, and Antenna, and

There are no off the shelf TNC which will give your 56kbps air speed
(or more). There are packet modems which are in use by various
people, but not with a TNC. An example is the WA4DSY "GRAPES" modem,

to be used by the P.I. synchronous I/O card by the Ottawa group. By the way, speed is measured by bps (bits per second), baud is not used commonly anymore as it refers to the change of phase per second, which does not correspond to the speed issue.

>anything else you might think I should need. Read some info about JNOS

>more than meet the needs of the Packet radio interface.

Although JNOS might run under Windows, I am not aware of JNOS having a socket link or a network interface presence to Windows (95 or not). In order to use "traditional" internet apps, you need to use a stack which has connection with Windows networking interface. FlexNet is the only software I am aware of which can do that. However, I am not aware of FlexNet supporting the 56kbps GRAPES or any high speed packet modem (yet), although they have a modular design which gives it a future possibility. The only other way to do it, which is the way our club (University of British Columbia Amateur Radio Society) has been doing, is to use Linux operating system, which has AX.25 driver for the P.I. card for the 56k link, and run this computer as a gateway. Then use a Windows computer connecting to this Linux gateway via a network connection (we use 10B2 ethernet). But you didn't mention you have another computer, which this needs. I am not sure how crazy your local packet group is, but it took us a long time and quite some money to build the system we have today. In order to have the connection with the user, (we are only doing a short hop point to point now), we are currently building the 56k as a repeater to be put somewhere high up on mountains. Stilll people with no line of sight to these repeaters will not connect as any reflections will distort the signals badly.

I am not sure if you have your licence yet, but may be that will be a first step. Or may be now you think paying your ISP isn't that bad an idea.

>If you can help would appreciate it

Cross-posted to: uk.radio.amateur,rec.radio.amateur.antenna,rec.radio.amateur.boatanchors,rec.radio.amateur.digital.misc,rec.radio.amateur.dx,rec.radio.amateur.equipment,rec.radio.amateur.homebrew,rec.radio.amateur.misc

Firstly I would Like to THANK DAVID TSE for his very informative and HELPFUL reponse to my intial posting, CHEERS DAVE, I will ask you a few things in a moment

Before then I would just like to respond to (I KNOW I SHOULDNT!!!! but I am going to) the other previous respondees, who were of absolute NO help, and I suggest have responded to these series of postings because they wanna flame!!!!! SIGH.

Why I want to connect to the net without an ISP, is to improve my connection speed (hopefully) have a closer more intermate internet connection to the NET than my ISP can provide (do away with firewalls etc BECAUSE I wanna experiment with net) and NOT have to pay the PHONE bill. The Americans dont pay for local calls to their ISPs, until that happens in UK, I want another way of connecting that doesnt invole a phone bill. If people wanna pay for their Internet connection, well I aint going stop them. But as for me I want to explore the various technological solutions to this problem, because a) its interesting, b) will save me money, and c) will provide an answer as to wheather its possible to implement realatively cheaply.

In response to WALT davidsons comment, I dont mind paying the ISP costs but the local phone call cost I do object to paying for. It goes against the very spirit of the Internet. In America they can leave their computers connected to the net 24hours a day 365 days a year presumably, and all they pay is the ISP. Well thats What I want too over here.
Further while ever there are people like you Walt, who are happy to go along with the main stream, progress will be slow. The Innovators through history have always been the people who have not been satisfied with the way things are.
I have even considered a small cheap two way SAT link to the NET. Apparently Bill gates has one up on me on this one, apparently he intends to implement a SAT system which would enable anyone with a 2 way sat link, (which units i think he is going to develope which will be very cheap), to link to the NET.
I too think for better communications, much improved speeds and services, it would be better to connect to the NET NOT via a modem and PHONE line, and to dispense with that archic part of the link altogther. So I am not the only one who thinks the modem phone link is a bad idea.

Right so having outlined my reasons for wanting a different way of connecting to the NET I will now go on to respond to the points made

by David Tse

>There are no off the shelf TNC which will give your 56kbps air speed
>(or more). There are packet modems which are in use by various
>people, but not with a TNC. An example is the WA4DSY "GRAPES" modem,
>to be used by the P.I. synchronous I/O card by the Ottawa group. By
>the way, speed is measured by bps (bits per second), baud is not used
>commonly anymore as it refers to the change of phase per second, which
>does not correspond to the speed issue.

I Dont mind having to implement the link David by I/O card, and modem, infact this was the initial way I invisioned it to be done. I just read somthing about a TNC. I presume then David if It were possible to implement the link via Single PC (by the Way I have some 386s hanging around doing nothing) I would need the following??

PC--i/o card--Modem--Radio--Amp--Antenn

Then the software that would implement the TCP/IP levels and communicate with the tradional Internet Application Progs would be the Flexnet software you mention below, is this a commercial piece of software?

>Although JNOS might run under Windows, I am not aware of JNOS having a
>socket link or a network interface presence to Windows (95 or not).
>In order to use "traditional" internet apps, you need to use a stack
>which has connection with Windows networking interface. FlexNet is
>the only software I am aware of which can do that. However, I am not
>aware of FlexNet supporting the 56kbps GRAPES or any high speed packet
>modem (yet), although they have a modular design which gives it a
>future possibility.

> In order to have the connection
>with the user, (we are only doing a short hop point to point now), we
>are currently building the 56k as a repeater to be put somewhere high
>up on mountains. Stilll people with no line of sight to these
>repeaters will not connect as any reflections will distort the signals
>badly.
>
Whats the max. range (in miles) of line of sight comms so as to implement a 56K connection for eg?

From your posting David then, I take it that full internet connection with all the traditional internet programs is possible to implement and that what I wish to atchieve is possible.

The implemtation of a Gateway you mentioned 56K wirth ethernet link is interesting way to do it, and as you pointed out may be the only way possible with speeds of 56K and above. But Hopefully my research will determine wheather it will be possible to implement a stand alone PC connected to modem and radio as outlined above for 56K and above.

Any Idea of costs involved David

Cheers

Ian

497. The Daily DX

Newsgroup: rec.radio.amateur.dx
Date: 1998-02-19 00:00:00 UTC
From: "Bernie McClenny, W3UR" <bernie.mcclenny@mail.wdn.com>
Message-ID: <34EC9FE2.17C2@mail.wdn.com>
Source record: 30460

```
. ======================
*** The Daily DX ***
======================
Volume 2 Number 30
February 16, 1998
Edited by Bernie McClenny, W3UR

----------------------------------------------------------------------

Headlines

----------------------------------------------------------------------

Yoshi, JA1UT, and his International Amateur Radio Volunteers will be
active from Palestine as ZC6MPT starting on 13 March. Length of stay
is unknown but will probably be one week or so.

Al, KK5ZX, will arrive on Johnston Island on 3 or 4 March. He
figures it will take about 1 week to get settled in and approved
for permission to operate the club station. He expects to be on the
air by 10 March and remain active when not working until 10 April.
He plans to take enough wire to install a 160 meter antenna. If his
schedule allows he will participate in the CQ World Wide WPX SSB
Contest at the end of March. QSL via K3SX (ex K3SME).

Ken, G4RWD, will operate as either ZF1RD or ZF/G4RWD from the Cayman
Island Amateur Radio Society club station. Look for him to be on the
island from 13 to 20 March. QSL via G4RWD.

World traveler Gerard, F2JD, will once again be active from Panama as
HP1XBI starting yesterday for 6 weeks. From there he will be in
Honduras as HR5/F2JD for one month. QSL both via F6AJA.

Look for TXK8DX to be multi op in the upcoming CQ World Wide WPX SSB
Contest on 28 and 29 March. The TX prefix is used by French overseas
territories and the K is for New Caledonia. Operators will include
Eric, FK8GM, Franck, FK8HC, and Alain, FK8FI. They will be using a
4 element delta loop for 10 meters, 3 elements on 15, 3 elements on
20, 2 elements on 40, a dipole and square for 80 and an inverted L
for 160 meters. QSL via WB2RAJ.

Steve, G0AEV, reports he will not be QRV from Guinea (see Vol. 2 No.
23) as it will take over a month to get his license. He reports
"There is a chance I will be returning to 3X later in the year" He
will try to prepare for that trip so he can operate the next time he
goes.
```

Art, N2NB, will be active from Montserrat one weekend a month for the next 11 months as VP2MDY. QSL via NW8F. VP2MFH and VP2MBP are currently active from this volcanic island. QSL VP2MFH via NW8F. QSL VP2MBP via WB2YQH.

Jeff, AJ2U, will once again participate in the ARRL DX Contests from Bermuda. First, he will do the CW Contest as VP9ID as a single op running QRP. QSL via K1EFI. Next, he will be joined by John, N2KJM, for the ARRL SSB DX Contest as VP9IB. Before and after the contests look for AJ2U/VP9 and N2KJM/VP9. QSL AJ2U/VP9 via WB2YQH. QSL N2KJM/VP9 via N2KJM.

Tom, K2TW, and Noah, K2NG, plan to be active in the ARRL SSB DX Contest from the caribbean island of Bonaire as PJ9G.

QSN

5B4AGC CYPRUS - George was working US stations on Sunday on 1824 around 04:30Z.

9N1NCW - NEPAL - Was found working Europe and Japan on 14021 around 13:00Z yesterday. QSL via DL3NCW.

FT5WG - CROZET - Many report working him on 14278 on both Saturday and Sunday between 13:00 and 15:00Z.

FT5XN - KERGUELEN - Helios came up on 14202 on Sunday from 13:00 to 15:00Z.

HB0/HB9LEY - LIECHTENSTEIN - JA's report working this station on 21152 between 07:00 and 08:30Z.

N2NL/KH2 - GUAM - Dave showed up both weekend days on 1831 around 12:00Z. QSL via W2YC.

OH0RJ - ALAND ISLAND - Was working Japanese stations on 14203 at 13:30Z on Sunday.

T88TT - BELAU - Was found on 10105 mostly working JA's. Later around 11:30Z he was on 7004 working all across the US until about 13:00Z. QSL via 7M1STT.

IOTA

Dan, VK8AN, will be active from Troughton Island (OC-154) as VK8AN/6 until 25 February. Look for him on 20 CW and SSB. QSL via VK4FW.

Claudio, LU7DW, will be active in the ARRL CW DX Contest from Martin Garcia Island (SA-055). His home QTH is in Buenos Aires.

These high speed links are normally on a point-to-point basis, not for general user access, normally for mail links etc. I think they are normally on the microwave bands, probably 10GHz.

Normal BBS/node access is 1200baud or 9600baud. Don't forget that is the maximum uninterrupted data transmission rate - the actual throughput is dramatically reduced when the data is packeted (if that's a word?) and after collisions with other stations' transmissions. As an indicator 1200bd will facilitate a data transfer of 60 bytes/sec on a reasonably clear channel.

Even if you can get a 56k user access to a node don't forget that node won't be the gateway to the 'net. The TCP/IP routing will go through a number of other nodes which could be any bandwidth you care to think of.. and yours won't be the only TCP/IP traffic.

..Then don't forget BR68 1(7) and the other sections regarding message content.

Get an ISP with a local call number, put that in Friends & Family (if you're on BT) and save the surfing for the weekends. Then it's only 0.9p / minute.

(or alternatively you could work for a company with an internet-enabled network and RemoteAccess with dial back :o))

I sent this info to Ian via email.

Perhaps some of the naysayers will be swayed :-)

http://www.wa4dsy.radio.org/

Your connection to this site will be via amateur packet radio at 56k!!!

I can't find a better cookbook for implementing internet access
over amateur radio and would be keen to hear of one if it exists.

503. KH5??? Operation

Newsgroup: rec.radio.amateur.dx
Date: 1998-02-19 00:00:00 UTC
From: thompson@mindspring.com
Message-ID: <6cilt0$9nf@camel12.mindspring.com>
Source record: 30466

Does anyone understand the KH5/KA4 operation. They are on just a few hours each day and then you never know where they are. I have KH5 (palmyra) on all bands except 40 SSB and 12 meters. Seems they must either be working or go ashore a few times a day.

I can't hear the 9M0 on 17 or 12 but that is propagation not lack of activity.

Dave K4JRB

Hello Bob, the problem is that the person who posted the query in the UK. Internet Gateways (and phone patches) are ILLEGAL under the UK license conditions, and with a few rare exceptions the UK packet network still mainly runs at 1200, with occasional 9600 ports, plus the odd once-in-a blue-moon high speed microwave band port. The information that he has been given is correct, specifically for the UK.

Regards, Graham Galbraith M0ADR

February 20, 1998

Dear President Stafford,

You have not responded to my letter of September 27, 1997 where I questioned why I was removed a VE. I have not violated any provisions of 97.525 or any other aspect of F.C.C. regulations that govern this hobby. Thus unless you restore my VE status FORTHWITH I shall send the following letter to newspaper editors throughout the country (on a staggered basis). This is a threat. I believe fully in what follows. The only reason I have not written this letter before was I was not motivated to actually send it.

Dear Editor,

There was a time when amateur radio provided a public service in training operators for military service, technicians for industry, fostered international goodwill and carried emergency communications. This rarely is true any longer. The technology has long ago left hams by the roadside. Today amateur exams are so simple children who can barely read can pass the test. All questions AND the answers are published in multiple choice format. The examinee knows the actual questions and answers ahead of time. The average age of today's ham is well over 50 whereas when I was first licensed the average age was 27. Hams are still communicating at 1200 baud when internet users fly along at 40 times that speed. As far as international goodwill, most hams rarely ask a foreign station anything more than what his equipment is, they do not care about culture, lifestyle or anything that really matters. Hams usually want the "credit" for having talked to 100 or 200 or more foreign countries (did you know both Hawaii and Alaska are separate "ham" countries?). If you have a scanner listen to frequencies between 145 MHZ-148 MHZ and listen to the content of the conversation. These are valuable frequencies that other public service and commercial interests could use PRODUCTIVELY. Cell phones have replaced the need for most emergency ham communications in this country. Hams use many other frequencies for little more than a discussion of personal medical ailments. Hams are required to serve the public but in fact they are serving themselves almost all the time. Worse they cause interference to other services (like your TV) and they erect large towers and guess what, there is nothing you can do about it. The F.C.C. is too underfunded to respond to citizen interference complaints and the ham radio lobby (American Radio Relay League) has caused both state and federal governments to pass laws that prohibit towns from controlling these large antennas.

The frequencies that hams use are for the use of everyone not their personal fiefdom. It is time Congress conducted hearings and investigated whether ham radio has become the vast wasteland (a term that former F.C.C

commissioner Newton Minow popularized).

513. 9M0C operation going QRT Sunday

Newsgroup: rec.radio.amateur.dx
Date: 1998-02-20 00:00:00 UTC
From: terrybu@netman.ens.tek.com
Message-ID: <6ckegh$j39@netman.ens.tek.com>
Source record: 30078

If you have not worked this one you better do it quick. Their Monday,
our Sunday (depending on where you are) is going to be the last day
according to Steve and one other op.

Frequencies noted:
75M 3800 listing up 3807
40M 7068 listing up 7164/7187
20M 14195 listing up 14200+/14207
17M 18142 (I think it was) listing up a few
15M 21295 listing up 21300+/21307
10M 28495 listin up (barely heard)

I'll leave it to someone more familiar with the CW operation to note those.
I did hear 7022 was one.

Terry
KI7M

They've also announced that during the weekend, they'll be concentrating
on the phone and rtty frequencies, since the ARRL CW DX contest is
starting in just a few hours, in order to keep giving out 'new ones'
and to avoid being just multipliers for the big guns during the
contest.

Why don't you get you head out of your ass so your brains, if you have any, can clear. And you think you should be a VE. I think you should crawl right back into the hole you crawled out of. It sounds to me if there is any trouble in Ham Radio you must be it. If you don't play my way I'm going to make sure nobody plays. That's a real good attitude to have. Ham Radio does not need people like you.

Does anyone have any idea what has happened to:
rec.radio.amateur.boatanchors

???

I have seen no new messages on there for the past 2-3 days, and
that is unusual!

Please reply here & via e-mail too, and dlete the 'NOSPAM.'

Thanks - Bry

532. Re: I sell big amplifiers

You have a point there Bill,
> I prefer the British term "valves" myself. It's really
> more accurate than "tube" or "pipe."
I believe 'Thermionic valve' is the correct term.

PS. The amp is on it's way to #12 for evaluation/modification if necessary. One's concerned about the bias circuit and whether it's properly regulated and also how bad the flat topping of the negative peaks are!
If I'm going to sell a 1kw output amp on the UK market I want it to be a 'sweet' one so I'm willing to wait while the basic design gets fully sorted.

I'll report back on all this.

Regards

Phil / UK

533. A61AN NOT QSLing !

HI !

I have send him direct several card's with "greenstamps" and IRC and also as registred letter (wich was a bit exspencive for me) but NO QSL in return !!!!!!
And I know he has received my card, because I have been QSOing with him after the first QSO, and he told me that I have "forgotten" to put in a "greenstamp".
So I did send him another envelpoe WHIT a "greenstamp", but still NO card received...
So I am WERY disapointed , because A61 is a NEW DXCC for me !!.

>services, it would be better to connect to the NET NOT via a modem and
>PHONE line, and to dispense with that archic part of the link
>altogther. So I am not the only one who thinks the modem phone link is
>a bad idea.

Then try getting B.T. and the other telecomms sharks
to make ISDN more attractive to you and me, for a
start. You might also suggest to the authorities that
some of these bloody amateurs be moved out of the
VHF/UHF/SHF spectrum they occupy* to make way for the
sort of free, high-speed Internet access you crave.

* ...or don't occupy, depending on your line of sight.

What I'm curious about is what the UK third-party traffic rules have to say about this. This sort of use is clearly beyond the scope of "transmissions of a technical nature whose importance does not justify the use of the public telecommunications infrastructure" (paraphrase of the Canadian regulations). What you propose would certainly be illegal in Canada.

>Packet radio interface.

First, all the packet gateways I know about are Amateur Radio packet
gateways, so to gain access, you will need an Amateur Radio license.
Second, not all the traffic carried on the Internet is permissible under
an Amateur Radio license in many countries, including, I think, the UK.

A group of BC Amateurs has designed and built a 56 K radio/modem currently
used to connect a number of sites together, including a link to the
Internet. I understand they're presently designing a new one that will
basically have two connections plus power - an ethernet connector and an
antenna connection.

They're presently using the 430-440 MHz band with about 85-100 KHz
bandwidth, although the goal down the road is to go up in frequency to

just under 6 GHz so that the bandwidth for a T1 connection will be available.

So, in conclusion, if I were you, I'd find a knowledgable person at the RSGB who can tell you what is possible under UK rules. They would also be able to steer you to active packet people in the UK.

73, Bob, VE7HS

Hi, "newbie" --

It sounds like you may be new to the "newsgroup thing," and aren't yet conversant with the subject of spambots. Spambots are automated newsgroup posters which place messages such as the ones you've replied to on literally tens of thousands of newsgroups, without any intervention or supervision from the people responsible for the spam.

Replying to spam messages in newsgroups does nothing but compound the waste of bandwidth and server space caused by the spam in the first place. The originators of the spam do not look in the thousands of individual newsgroups for any replies to their spam, and will thus never see your indignant reply... but the rest of us have no choice.

Further, many of us use news servers such as Super Zippo (http://www.zippo.com) which implement automatic spam filtering based on a wide variety of criteria. The idea to keep messages with subject lines or contents like "MAKE MONEY FA$T", and so on from ever appearing in their customers' view of the newsgroups. This technology works very well, and is a major selling point for the news services that offer it. Unfortunately, when someone like yourself replies to a spam post that is visible on *your* news server, your reply has the effect of making the spam visible to the rest of us for the first time -- effectively generating spam we otherwise would never have seen in the first place. This happens because many of the common spam filters don't reject replies, only original messages.

So in short, please knock off the replies to spammers. Your audience for such replies is limited to everybody in the world *except* the spammers themselves, and believe me, everybody else already agrees with you.

It has everything to do with all aspects of amateur radio. One individual with a bruised ego has decided that amateur radio no longer serves what he considers his agenda/purpose/deranged ideals. There is always someone out there with an equally warped sense, or lack of, purpose in a position to make things happen. Burt cares only for himself. He's proved that time and time again. As with a puppy that messes off the paper, the time has come to rub Fisher's nose in it and not only call his bet, but to raise the stakes as well.

If you're not interested, by all means, use the killfile/delete feature of your newsreader.

544. OH2BUA no longer accepting outside spots

Newsgroup: rec.radio.amateur.dx
Date: 1998-02-22 00:00:00 UTC
From: thompson@mindspring.com
Message-ID: <6cqjot$g20@camel12.mindspring.com>
Source record: 30022

I guess OH2BUA is no longer accepting outside spots. I sent 4 or 5
the past few days and none make it.

Anyone know if this is being fixed?

Dave K4JRB

545. Jerks block out 9M0C on 21295

Newsgroup: rec.radio.amateur.dx
Date: 1998-02-22 00:00:00 UTC
From: thompson@mindspring.com
Message-ID: <6cqk6q$1o4@camel18.mindspring.com>
Source record: 30023

The 9M0C was working the SE USA for the first time in 4 or5 days on 21295 when a K5 in Arkansas brought V85HG to 21295. They just jumped on the freq without listening. Several of us asked they move and finally a W6 got the V85's attention and all he did was call the 9M0C and then say "don't hear him." The 9M0C gave up and went to 21022 CW.

What makes this so bad is a local had just been answered by 9M0C and the QSO never completed. He is boiling and I don't blame him. I think the K5 and V85 owe SE hams an apology.

Why do some hams do this???? Sure leaves a bad taste in our mouths!!!!

ha ha ha, another classic from Masa, "no one is using 6m or 2m here in Montreal" if your curious as to why Masa doesn't hear anything go look at his antenna 'farm' for VHF, it consists of some mobile sized verticals stuck to a plastic box sitting in a window sill.

By the way Masa, I was in Sherbrook a week ago and drove out from Montreal, there was MORE THAN ENOUGH activity on 2m, you seem to be the only one not hearing anything.

I have heard an AM net here in the Detroit metro area and one in Toledo while passing through, many are running old Gonsets, Heath Two'ers and the like, a few homebrew's pop up now and then. The activity seems to be limited to scheduled nets.

553. WHY K1OIK IS NOT A VE

Newsgroup: rec.radio.amateur.dx
Date: 1998-02-22 00:00:00 UTC
From: kf2ti@planet.net
Message-ID: <MPG.f59e0dfeb71e87f98996e@news.planet.net>
Source record: 30107
Cross-posted to: rec.radio.amateur.antenna,rec.radio.amateur.dx,rec.radio.amateur.equipment,rec.radio.amateur.misc

When this thread had it's first go around last year (Burt does love to recycle his compost), by his own admission, he never once administered a VE session during the last 12 month period thus the VEC has, at its discretion, the powers to non-renew a VE's credentials. According to the booklet, Burt failed in his performance as a VE and therefore his credentials were revoked. What this all boils down to is sour grapes

Burt's use of threats is consistent to his personality. He is also currently harassing the people of Packard Bell for failing o provide him with free customer service on a computer that (1) is 2 years old and (2) he admitted damaging in trying to install a piece of hardware.

What amazes me is that he threatens to cause great fiscal harm to the company unless they comply with his demands on the basis of his side job of selling computers. IMNSHO, if this person really were a skilled salesman of computers and a genuine teacher of electronics, you'd think he'd be able to diagnose the problem and fix it. Alas, this is probably not the case as this is not the first post that Burt has made when something electronic has failed and he has no clue as to the problem.

His use of threats unless he gets his way smacks of the little kid who throws temper tantrums and stomps his feet. His constant referral to the nazis' and of Germany are truly amazing as he himself has used their tactics to foist his opinions on others.

His constant haranguing of amateurs as gutless is unfounded. Burt is like one of those annoying little dogs that yip at everything that comes close yet will never leave its own yard. When challenged, Burt has always come up with reason after reason as why we refuses to meet face to face on neutral terms. One of his best was when, invited to meet at a Boston area computer show (which he loves to attend) he DEMANDED 25 cents per mile plus expenses.

When asked to actually come on the air, he picks frequencies that are unusable, usually 40 meters at night. To his credit he then asks YOU to pick the frequency. So far, every frequency has too many problems...no propagation on 10 meters, no 20 meters because we're too close, 80 meters is too noisy, he has no antennas for the WARC bands...and on and on.

Like everything this too shall pass, but until then I suspect an endless stream of recycled compost...funny the first 1/2 dozen times, tedious the next.

Oh well. I too will counter with editorials should Burt's appear. I will submit posts from the newsgroups such as ASD to show discredit

whatever he submits. Such is his right, such is mine.

I took the time to read Fisher's vitriolic little webpage and have confirmed what I always thought, the man is definitely not playing with a full deck.

Yes, his credentials were not renewed. He was not fired as he states. He, from the outset, trys to throw his "weight" around by threatening to go and "cry" to the FCC. you must restore FORTHWITH he states....and then..states he is being discriminated against.

The ARRL response cites factors as to non renewal and the very 1st reason is exactly why this started. By Fisher's own admission, he has not administered a VE session in the specified timeframe. According to Part 97.525

No VEC may accredit a person as a VE if the person does not meet minimum VE statutory qualifications or minimum qualifications as prescribed by this part

Burt's response is then to argue that he was "fired" for no apparent reason, yet he conveniently forgets that in another paragraph her mentions that there were others that supposedly have failed to meet the minimum qualification. In fact, this is the paragraph where he does admit his failure by lying..I quote

Further, I know several VE's that have never been active in giving a test (as I have) that have not lost their status as a VE examiner"

If you'll remember the 1st go around, Fisher admitted to not having given a test in over a year, so he is blatantly (1) lying about and (2) attempting his little boy tantrums but crying that "other guys were doing it tooooo!!!"

Fisher then continues his tirade with threats to write his Congressman concerning amateur spectrum. In fact he is really threatening to stoop to blackmail to get his VE status restored.. I quote " I suggest you do not motivate me to do as I might wish. I am willing to let sleeping dogs lie, just restore my VE status.

If you do so, this matter ends, quietly. If not, neither of us can be sure what is at the end of the road."

What is also very interesting is now Fisher claims to be a member of a minority. My question is exactly what minority is that?? Obvious he's not black, Latino, Asian, most definitely he's not a woman, although he has a tendency to cry and whine like some. In fact, he claims

discrimination on this basis. He further claims to have done quite well on Wall Street and therefore will bring his considerable financial might to bear with legal action.

Words speak very loudly here and the words from Fisher show a total lack of any sanity. Normally I don't promote websites but this you have to see. A man reduced to fabrications and outright lies to massage an obvious bruised ego.

I can see why the people of Packard Bell are paying him no mind as well.

Get the full story on Burt Fisher..check out Dejanews to see just what type of man is teaching children in Cape Cod schools

Thank you for your comments.
I have met people like Burt, in my short 49 years of life and 33 years as an amateur. They really get me, you, going, but, when I find that they have little to back themselves up, I then reanalyze what I am doing and settle back..... It isn't worth arguing with them.
Thanks again.

The JPS NIR-12 seems the best, though the Timewave 599+ is also very
good. Be prepared for sticker shock, though. They aren't in the Radio Shack
price class. But then they do a hell of a lot better job than the RS unit did
too. Timewave also has some cheaper, less capable, units which may
satisfy your needs. Go look at www.timewave.com and compare features.

Another option, if you have a Soundblaster card in your computer, is
Beezley's DSP Blaster software. It is quite good, and you don't have
to shell out for extra hardware to use it. See Beezley's ad in QST.

Yes for 14.100,00 but some 2K it is SSB. I don't know in your area
but here from 14.090 to 14.106 the NCDXF beacons are totally blasted by
continual day and night digital garbage. In the 7050 to 7099 section
which is SSB for a lot of countries (Europe, JAs VKs VEs etc) it is
now very difficult to have a decent QSO.

Yes, I agree. Is there a moderator on this NG?
If not, to whom can we go to get this type of garbage removed/filtered from the NG?

SB DX @ WW $OPDX.345
Ohio/Penn DX Bulletin No. 345

The Ohio/Penn Dx PacketCluster
DX Bulletin No. 345
BID: $OPDX.345
February 23, 1998
Editor Tedd Mirgliotta, KB8NW
Provided by BARF-80 BBS Cleveland, Ohio
Online at 440-237-8208 28.8k-1200 Baud 8/N/1 (New Area Code!)

Thanks to the Northern Ohio Amateur Radio Society, Northern Ohio DX Association, Ohio/Penn PacketCluster Network, WB2RAJ/WB2YQH & The 59(9) DXReport, K4VUD, N4BQW, N4JQQ, WA4FFW, WA4JQS, KB5GL, N5AW, N5VL & The Island/DX News, K8XP, W8EB, G3HSR, G4BUE & DX News Sheet, HB9FAP, JA0DWY, LA6WEA, OE2GEN, PA3ERC, VK3CWX, VK6APK, XE1KK and ZP5AZL for the following DX information.

3C, EQUATORIAL GUINEA. Alan, 3C5I, made his first contacts on six meters (possibly the first ever from 3C?) last weekend with Italy (apparently on double hop E's). He runs a beacon intermittantly on 50.107 MHz with 10 watts to a 4 element quad. Note, however, local TV makes reception difficult for him in the evenings (approximately 1500-2300z). Also, Alan is on the HF bands, but his main interest is six meters. He expects to be in Malabo for two years. QSL to Alan Isaachsen, c/o Mobil Equatorial Guinea, P. O. Box 13908, Dallas, TX 75313.

5R, MALAGASY REPUBLIC. The "DX News Sheet" reports Ray, is still quite active as 5R8FK, often on 30 meters CW around 0000z. QSL via NY3N.

9M6, EAST MALAYSIA. The 59(9) DXReport states Pekka, OH2YY, will be signing 9M6PO from Kenigou for the CQ WPX SSB Contest (March 27-28th). His top priority is the lower frequencies.

9N1, NEPAL. Just a reminder that Charlie, K4VUD, has returned to Nepal and will be active as 9N1UD. He will be active in the upcoming contests until his return to USA on March 9th. Please refer to OPDX.339. QSL via K4VUD.

C6, BAHAMAS. Steve, N4JQQ, will be active from Treasure Cay, Abaco, July 10th to August 2nd, as C6AFP. He was there this past week, but his main activity was to work on his house there. He states that he took a PK-232 for RTTY to be used in the future by him or by anyone wanting to rent his house (you must bring your own laptop). QSL C6AFP via N4JQQ, Steve Rutledge, 199 S. Grove Park Road, Memphis, TN 38117.

HK0, PROVIDENCIA (Update, please refer to OPDX.344). Silvano, KB5GL, reported to OPDX that he will now be operating as HK0/KB5GL instead of KB5BL/HK0 (as reported earlier). Also, Vance, N5VL, from the Island/DX News, told OPDX that he talked to Silvano by telephone and informed him that he has extended his IOTA operation from NA-049. His new dates are February 26 to March 6th.

JX, JAN MAYEN. Ken, LA6WEA, reports to OPDX that Per, JX7DFA, will be active every Saturday on 18090 kHz from 1400-1500z, looking for U.S. stations. He states QSL via: JX7DFA, N-8099 Jan Mayen, Norway or via home call LA7DFA.

KH9, WAKE ISLAND. The Dateline DX Association returns to Wake Island this week and will be active from February 26th through March 11th. Their emphasis will again be on Europe and the low bands. Operators will be Tom/K8XP (ZK1XXP, AL7EL/KH9, V7/AL7EL), Bob/N2OO (9M6OO, V85OO, V85OM, XX9OO), Michael/N6MZ (VK0IR, ZK1XXP, SV5/N6MZ), and Bill/N2WB (KG4WB). Four stations are planned to be active 24 hours with directional antennas for 10 through 20 and verticals for 40, 80 and 160. Special efforts on RTTY will be handled by N2WB. Operators will sign K8XP/KH9, N6MZ/KH9, N2OO/KH9 and N2WB/KH9. QSL via WA4YBV. For more details, please refer to OPDX.342. Also, checkout the Dateline DX Association Web Site whcih can be found at: www.goldtel.net/ddxa Updated information can be found there for the upcoming Wake Island operation, as well as other operations in the past. The site is still under construction and is not yet quite complete.

OE9, AUSTRIA. Gerald, OE2GEN, reports that some members of the Austrian OE2DX-GROUP (OE2S) will be active in the 1998 ARRL Internation Phone Contest (March 7-8th) as OE9S. QSL via OE2GEN, please via bureau.

PJ8, ST. MAARTEN. By the time you read this, Ron, ND5S, and Bill, W8EB, (along with their wives KF5LG and W8DVC) will be active from here until March 8th. They will be using the contest callsign PJ8A for both CW/SSB ARRL Contests and the CQWW 160 Meters Phone Contest. They plan to keep a sked each day on 14200 kHz + or - 2030z with the gang back home. If you need a contact, you can make it then. They will also be active on RTTY and the satellites.

QSL INFO AND NEWS.....
If you had a chance to work Fabio, HB9FAP, during the ARRL CW Contest as a Single/Op Single Band (7MHz) this past weekend using the special callsign HB5H, please QSL via home callsign.

ZK1XXP QSLS. For those of you who are waiting for your QSLs from the Dateline DX Association's operation from North Cook in September, those cards have still not been received from the printer in Germany. They were told they should arrive in the next 3 to 4 weeks. The DDXA appreciates your patience and certainly wants to confirm those QSOs for you. Again, please be patient. It is also not necessary to send second requests.

N4BQW QSLS. Mac, WA4FFW, reports that all QSLs received to date for all of the N4BQW operations have been answered. This includes all bureau cards and all cards that have been received. Mac reports with deep regrets, there unfortunately was a pirate that operated a lot on 21 MHz CW and also 7 MHz CW. Chuck did not work any 21 Mhz CW on his KH5 trip. He worked only a few 40 meters CW contacts, but it appears that the pirate was quite active and must have had a good signal. All cards received for what appears to have been a pirate were returned with a note of explanation in them.

Rob, PA3ERC, reports that all direct QSLs for the Caribbean Tour '97 are mailed. These are for: J6/PA3BBP, J6/PA3ERC, J6/PA3EWP 9Y4/PA3BBP, 9Y4/PA3ERC and 9Y4/PA3EWP. He states bureau cards will be sent out next week.

SSIDXG AND MKDXF PACIFIC ISLANDS DXPEDITION (Update). The Dxpedition has already begun with SSIDXG member Mark, KA4IST, operating from Palmyra as KA4IST/KH5 on February 5th. Mark will operate as much as possible on CW, SSB and RTTY, but will also be serving as member of the crew of the transportation ship. On February 20th, SSIDXG member Chuck, N4BQW, another operator, joined Mark on the island. During the upcoming week, look for more operators to arrive. Slated to arrive on February 25th, are Joe/N4DAZ, Harold/K4AU, and MKDXF members Pat/NH6UY, and Mac/WA4FFW. The around the clock operations from Palmyra will continue with several stations on the air until February 26th. At that point and time, the group will depart for either Baker-Howland or Kingman Reef. They have permission to operate from Kingman, but the group is at the mercy of the USFWS and negotiations are continuing for this leg. There is a possibility for Chuck and Mark to put Kingman Reef on the air before the others arrive on the 25th.
The Team's plan is to sail for Howland Island starting operations on or about March 5th and be on the air for six days. The trip will be in conjunction with the U. S. Fish and Wildlife Service (USFWS). Again, the team of operators will be at the mercy of the USFWS's work schedule, and they have stated that they have 6 days work there.
The six operators have announced that they would like to dedicate and conduct this dxpedition in the "Spirit and the Memory" of the late Eric Edberg, W6DU. Eric was Board member of the NCDXF. Eric loved DX and loved to see anyone work a new one no matter where in the world they lived. Eric became a "Silent Key (SK)" on January 19th only hours after voting from his hospital bed to help support this operation. It is in that spirit and in his memory that the team has dedicated this dxpedition. In the Spirit of Eric, W6DU, the team will do everything possible to work as many contacts as possible throughout every part of the world. They will work all bands CW, SSB, RTTY, and they will try six meters. The only factors that will influence their operation are propagation and weather Look for the following callsigns to be used:

Palmyra KA4IST/KH5 QSL via AC7DX
Baker-Howland (SSB) K4AU/WH1 QSL via K4AU
Baker-Howland (CW) WA4FFW/NH1 QSL via WA4FFW

SPECIAL EVENT. The callsign VI3GP has been allocated to the Eastern and Mountain District Radio Club for use from March 5-8th, inclusive, in conjuntion with the running of the Australian Formula 1 Grand Prix in Melbourne, Victoria, Australia. Please QSL to the Club callsign VK3ER, either via the Bureau or direct to: EMDRC, PO Box 87, Mitcham 3132, Victoria, Australia with sufficient return postage and SAE. Operating frequencies will be supplied at a later date.

SPECIAL EVENT. Look for ZC6MPT to be activated by Yoshi, JA1UT, and the International Amateur Radio Volunteers beginning March 13th. Activity will probably last for about a week from Palestine. QSL via JA1UT.

SPECIAL EVENT. Look for 8J0WPG to be active during the "1998 Winter Paralympic Games" in Nagano, Japan, from February 23rd to March 31st. Activity will be on all bands CW/SSB. Send all QSLs via JARL bureau. Sample QSL and more infomation is avaiable at the Web site: http://www.clio.or.jp/~obayashi/8j0wpg/

SPECIAL EVENT. The Northern Corridor Radio Group will be activating the special callsign VI6EWT to commemorate the 120th anniversary of the opening of the East-West Telegraph. This line carried all communications between Adelaide and Perth, a distance of some 2700Km. Operations will be from the tiny township of Eucla which is located at the border of Western Australia and South Australia. Eucla is the site of one of the Telegraph Repeater stations placed along the route of the East-West line. A team of 15 operators will commence operations at 0100z on Saturday, March 21st and end the 24 hours operation later on Sunday, March 22nd. This period of operation coincides with the Australian Field Day Contest. Activity will be on 80-10 meters. Following this initial Field Day operation, the callsign will be used on all bands and all modes by various operators in VK6-land. This period of operation will probably be for about 2 weeks. This may be extended if interest is high and propagation is good. The Northern Corridor Radio Group will also be using the VI6EWT call for the CQWW WPX SSB Contest, March 28-29th, from its VK6ANC club shack. The QSL cards for direct request may include a photo of the ruins of the Eucla Telegraph Station. Bureau cards may not be as elaborate; it all depends on numbers and costs. QSL VI6EWT via the bureau or direct to: Northern Corridor Radio Group Inc. VK6ANC, PO Box 244, North Beach, WA 6920, Australia

XE, MEXICO. Look for the XE1RCS contest team to be active in the CQ 160 Meter Contest (February 27th to March 1st). During the contest, and for the third year in a row, they hope to work again all 50 states as well as many Canadian Provinces. They will also be looking for Europe and other DX stations. The team operators are XE1ME, XE1VIC, XE1YJY, XE1JG, XE1YAW and XE1KK. They will be using six beverages, two half wave dipoles, and a 1/4 wave vertical at full legal power. QSL via bureau or via XE1KK: Ramon Santoyo V., P.O. Box 19-564, 03901 Mexico, D.F. MEXICO

ZF, CAYMAN ISLANDS. Ken, G4RWD, will be active from here March 13-20th as ZF1RD or possibly as ZF/G4RWD. Operations will take place from the CIARS club station. Also, look for Ken to be active in the RSGB Commonwealth Contest. QSL via homecall.

ZP0, PARAGUAY. Tom, ZP5AZL, reports to OPDX that he will be active in the ARRL DX Phone Contest as a Single/Operator 20 meter high power entry using the special callsign ZP0Z. He plans to make use of his new antenna system (4 elements over 4 elements monoband stacked yagis).

-=-
IMPORTANT NOTICE! Users of the online BARF-80 BBS (Home of the OPDX Bulletin) take note, the area code has changed as of August 16th. The new 440 area code will replace the 216 area code. Currently both area codes can be used, but the 216 area code will be permanently replaced in April, 1998. BARF-80 BBS online at 440-237-8208 28.8k-1200 Baud 8/N/1

>

If you want to lease a T1, ISDN or such, yes. However, in California, I pay Pacific Bell $16 a month for my line. That includes unlimited free local calling. Any LD charges are done through any choice of carriers, such as MCI, ATT, Sprint, etc. We choose our own LD carrier, and now it is commonplace to choose your own local carrier. Rates are extremetly competitive.

However, for home-telephone service, US$16 a month is not a bad deal, especially considering I racked up 110 hours of internet connect time last month.

> There is no such thing as a free lunch.

True, but our phone service here is close to it. Rates for business/commercial on the other hand are priced very differently.

It's already happening... the 47GHz part of the spectrum, later this
year, may see the first evidence of this. The amateur band up there is
in real danger if the commercial people "run out of space"...

If you'll check, you've posted to SEVERAL newsgroups. Have you considered e-mailing one-to-one? Or just posting to the newsgroup dealing with your subject of interest?

I know most Hams don't go on the air on five bands at once, but that's just about the equivalent of the present situation.

Being the gentlemen that Hams have always been, I know you'll want to rectify this situation.

Thanks for the consideration.

Own a W2FMI Original!

Dr. Jerry Sevick, W2FMI, in his years of research has wound over 1000 BALUN and UNUN transformers and has used over 1 mile of wire over a 20 year period. The results of his sensational work are the powerful 2kW to 10kW, 98% efficient 1 MHz to 50MHz BALUNs and UNUNs. This work is featured in over 20 articles, 3 books and the ByteMark website.

Another result of this work is hundreds of wound BALUN and UNUN transformers that Dr. Sevick would like to liquidate. For a limited time, you can get a hand-made BALUN or UNUN transformer, built by Dr. Sevick himself. These carefully crafted transformers were constructed for testing and study purposes during the course of Dr. Sevicks investigation into the theory and practical applications of Transmission Line Transformers.

Each transformer comes with a detailed description of its design, what it would be used for and how it was constructed. The unit will be accompanied by a certificate noting its authenticity, signed by Dr. Sevick.

These transformers are available for $30 (plus postage) until they are gone. We cannot honor requests for specific designs, units will be shipped on a first-come first-served basis.

Don't miss out on this historic opportunity! Be one of the first to have a W2FMI Original BALUN or UNUN in your collection. Email w2fmi@bytemark.com to reserve your unit today!

Or, Place your order on our Secure Server using you MasterCard, EuroCard, Visa, Discover, Novus or American Express. Note the part number as "W2FMI-CC" and the description as "Collectors BALUN." Shipping is over two but under five pounds.

Just a note to congratulate the crew of the 9M0C operation. Unlike some recent DXpeditions they listened to what the fellas trying to work them told them. They changed their plans of attack to make the best of conditions and IMHO they did a truly excellent job.

Well done lads!!

I have told this story before. Someone wrote and asked me to re-run it
from time to time. this seems like a good time, so here goes:

A few years ago a young man was at VE at a test session taking the 13 WPM
test. He was legally blind, could have easily obtained a waiver, he did
not want, or need one. As the code tape was playing he had a legal pad and
a felt tip pen with which he wrote the code down, 3-4 characters a page
while all the while flipping pages in the pad. When the tape was over, I
read a question to him, he flipped through the pages until he found what
he was looking for and I would re-read the question along with the choice
of answers, it was multiple choice. He would write the # of the question
and his answer on a page of the legal pad. When he was through I had no
trouble reading his answers, or going through the code he copied and
reading it. He got 8 of 10. He moved after that but I heard he upgraded to
Advanced.

After that, we coordinated on 2 meters while he walked me through in
connecting with his computer, an IBM Compatible, through the phone lines.
My computer back then was a Tandy 2000. It was my first modem connection.A
very brillant young man, who did not let his lack of vision slow him down.

The best person to go to is yourself. Use a good threaded newsreader with
a regular expression filter capability and you won't see this sort of thing. A
good newsreader allows you to customize what you see so that *you*
determine what you get from a newsgroup, or collection of newsgroups.
Rather than depending on someone else to be your nanny, you can make
your own choices. Freedom, what a concept!

Perhaps you should plug in your antenna.

Funny, you were just telling us a month ago how 2 meters was a hot-bed of
emergency traffic due to the "ice storm".

So, which is it? Dead, or a hot-bed of activity.

No! the insult is the ARRL insistence that anyone who applies for an exemption is a cheat and to justify that, they demand full access to a persons medical records without any guarantee they will not be made public by the ARRL or used in a manner detrimental to that person later down the line. Ever paid for a full set of copies regarding a severe medical condition? I have and it cost hundreds of dollars. If you are disabled you will know what I mean. David Sumner is merely the Hachette man for the Board of Directors and is doing exactly what he is told by the board to do.

Hmmm.... Seems to be getting updates just fine. Maybe
your email/web server is unhappy with the address/cgi
script?

I was going to report FO0/OK1TN on 30m last night (*after*
I worked him - hey, I'm a QRPer, can't afford to tip off
you KW guys *before* I bag 'em ;-)), but noticed he'd
just been reported by the fellow who worked him a few Q's
before I got him.

Not to mention the flood of spots during the DX contest.
Yikes!

Cheers de AB7TT,

-Joe, vole@primenet.com, AZ ScQRPions

>
> Where did I EVER say that?

On many occasions back in June 1997, when you first dragged this dead horse
out, you were repeatedly asked when was the last VE session you administered.
You never answered. In fact, your response was, that you didn't know there
was a time factor and before the time factor was revealed you volunteered that
several other VE's had not administered a testing and they had not lost their
VE status. Interesting that you would on one hand make such comments and yet
never once answer a direct question posed to you.
>
> >No VEC may accredit a person as a VE if the person does not meet minimum

If a signal at 28Mhz are sent with 30 degree angle towards the F2-layer and
the actual MUF at the target(up in the sky") are 12Mhz, how much will be
reflected ?
Are there certain formulars that calculate MUF concerning both E and
F2-layer skip ?

Thanks.

Si, esiste il suo convertitore che va fino a 1.4 GHz non costa molto e va
anche discretamente. Io lo pagai 100.000 lire.

There's an empty connector originally intended for a extended frequency
converter. It is not shown on the schematic. If you ground pin 14, the
readout will program from 0 to 999 MHz.

I hooked a 6.8K resistor from UHF1 to UHF2 on the band unit. This enables the
existing front end
to run in the 905-999 frequency range.
Mine worked up to 925 before the oscillator went out of lock. I expect you
could tweek the insides
of the front-end module to shift the range up to get to 950.

If you want lower frequencies, the radio is set up to tune 0-20, 20-40 and
40-60 MHz. with a 73 MHz
first IF. All you need is three VCOs, a couple of mixers and an oscillator to
mix the 73 down to 10.7.
If anyone has implemented this board, I'd be interesteed in the results.

DISCLAIMER: I HAVE NO INSIDE INFORMATION. ALL THIS WAS DETERMINED FROM
REVERSE-ENGINEERING ONE UNIT. MY DESCRIPTION MAY CONTAIN ERRORS. YOUR
MILEAGE MAY VARY. PROCEED AT YOUR OWN RISK. I AM NOT RESPONSIBLE
FOR YOUR BROKEN RADIO.

I see Burt got someone's goat, again!
He has been playing this game on-line for several years.
Please people, treat this "person" like the child that he is, don't give him
a reaction. That's what he is looking for. Bad attention to him is better
than no attention at all. He is an insecure person who must create
controversy to make himself feel important.
In a word, ignore him. His threats and insults are nothing but hot air.

During about 10 years have lost money with the Radio
the emissions were all cultural.
In SPAIN do not have COMPANY FREEDOM and by so many can not mount A commercial
network by administrative and bureaucratic problems.
This is due to the fact that to obtain a frequency one must go through a contest I publish And here it is when appear The problems.
The speculators, those which do business without having interest in the radio
emissions, alone want the grant for power to sell it, even to coast of bidding
farewell to all The insole of a network that operate well, it is preferable that all controlled este by the large chains and thus to remove the natural right to the FREE EXPRESSION and COMPANY FREEDOM.
It is easier to control to a chain than hundred Independent radio, the radio networks Are considered but a form of washing the brains that a form of social
expression.
In this country to nobody is pursued to himher you by their its political ideas, is not given to himheryou frequency And is remained without issuing in radio, without work and if protests put you a fine of 67.000 $dollars And if do not pay to the jail, that if this is a democracy and all is going well,
very well.
So that then they arrive to you the rumors of the fact that before of the contest publishes, the frequencies already it Has been given and to the friends of always, if this finally is going to seem a republic ++Bananera.
We have lost the @@expensa of reissuing in a way commercial and power to live
of our Work, hard work and not always well-paid, but we are some professionals
of the radio And we do not know to make nothing but, alone radio and television, but finishes esta is worse still.
We are professional of the communication cloral and our goal is the prompt breach.
During the radio emission of makes some months a key beam on the repeater of the destruction network our unit of power, to prescribe it of the liaison
and the antenna of the same, remained destroyed,
The cost of the nevosa equipment is superior to 8.000 dollars.
We do not have money for power to pay the new equipment and we leave with 38

courtyards in cute Forcing to the network so that this, draw all what could, with noises provoked by The regulation upon having the issuer to less of 5 meters of the audio equipment.
Please if you can help us sends us at least 10 dollars, if not the commissions
of the Banks is quedarian with all money and not us llegaria given, if you are many Could buy a new issuing of radio in fm (88 - 108 mhz) commercial band.
Not pens&#65533;is that we want to earn money, with this proposal, we would prefer an equipment such as the one which were having before, compound by
Codificador st&#65533;reo
Commercial issuer of 30 watts commercial band 88 - 108 @@mhz power Unit of 1000 watts
Liaison unit (network and receiving) commercial band 890 @@mhz 4 dipolos of vertical polarization - horizontal with 8 db of profit.
That we can offer you, few thing but if someone wants that theirits your his maqueta, theirits your his disk Theirits your his cultural association, to spread some ideas, theirits your his form of thinking make known some movement, cultural trend ect as long as this ideas will be LEGAL, we can help you we.
We have opened I number an of account in a bank, where be able to do The income, almost that it will be will be well received.
If @@disponeis of radio equipment, much better
They are accepted from 10 dollars (recommended at least 15 or 20), we need 8.000 @@dolares or a new equipment.

God gave you a free will, and the "democracy" you complain about not having is, in fact, exactly what you do have and is persecuting you. Why haven't you simply moved to another country? You could qualify for a station license with hard work and only the usual amount of beauraucatic politics, and wouldn't have to look for handouts to have a voice.

Just about everything's illegal in Canada.

I've been led to believe that, provided all the traffic
passed over any (theoretical) Internet/Amateur Radio
interface is originated by and destined for licenced
Radio Amateurs, then such an interface would not
be illegal.

Actually, there is argument for completely flat rates at the national
level for telecommunications - i.e. no toll charges for long distance at
all both in Europe and America.

I find it difficult to understand your hostility to flat rate local calls,
though. What is your basic objection?

It seems to work just fine in North America.

> 73 es tnx de Dan, ke6d
> dql@slip.net

Hello Dan, and welcome to the wonderful world of "pasteboard collectors"
(that's what QSLs used to be made of a long time ago).

If the station you worked has a listed QSL manager (and you can get those
lists from many different source, but be mindful that not all of the lists
are 100% correct all of the time), it means that the DX station wants you
to send the card to the manager, instead of sending it directly to him.
Maybe that was understood, but it never hurts to start at the beginning.

If the station has a stateside manager, it's a simple matter of putting
your card and a return SASE (self-addressed & stamped envelope with $.32
postage on the return card so that the manager doesn't have to shell out
any money to send the card back to you) and slipping that package into
a larger envelope and sending it to the manager. Usually you will include
all QSLs made with the DX station on one card (instead of sending 3 cards
if you work the DX station on three different bands or modes).

When the manager gets your card, it goes into the stack that is waiting to
be worked. When the manager gets the log from the DX station (it might
be emailed, maybe sent by airmail on paper, or hand-copied and delivered by
a friendly airline crew - who knows?) then the manager begins to whittle
down the pile. Sometimes the manager has to wait for a while to get the
logs from the DX station. Sometimes the manager is waiting on QSL cards to
be printer. Sometimes you get a return almost before you realize you've
posted the original card. It just depnds on circumstances.

If you have worked a DX station that has a foreign manager, you have a
couple of choices:
1. send your QSL card and envelope directly, using foreign stamps
purchased from a stamp service (see QST and CQ for their ads) to put
on the self-addressed envelope. Usually, this will net you the fastest
return of your QSL card, but can get expensive: for example, my card to
a German DX manager runs $.05 for each envelope ($.10), $.60 for postage
to Germany ($.70), another nickle for the card ($.75) and then it's $2.00
for the German stamp to get my card back to me ($2.70 total). I use

special envelopes of the European size (different than that used in North America) that nest the smaller envelope inside the larger envelope, and are light enough that both envelopes and 1 card runs less than 1 oz.

2. if you're not in a hurry, you can use a QSL card service to forward your card to the manager. WF5E runs one such service... $.17 per card or 6/$1. He sends the cards directly to the manager, and gets the cards back that way. The cards then are distributed to you via the ARRL Incoming QSL card bureau. To get your cards from the ARRL, you keep a supply of SASE envelopes on hand at the bureau and they periodically send them to you when the envelopes fill up to a certain point (I keep $.32 on my envelopes and get them sent to me when I have 5-7 cards in 'em, for example. Reponse times vary... I've had a couple take less than four months this way.. and I'm still waiting on others after over a year.

3. Even slower, but a lot cheaper, is the ARRL Outgoing QSL Bureau, if you are an ARRL member. For $1, they will forward 10 cards to the DX Bureau handling the country your manager is in. Or, for the bulk QSL'er, it's $4 for a pound of cards. This way is the slowest.. and less reliable than any other. You may find you get less than 50% response from cards sent via the ARRL Bureau system like I do... others seem to have better luck than I.

With any luck, you've got an idea of what you want to spend, versus how quick you need the card, now. Myself, if it's a new country for me, it goes direct. If it's a new country on 40 or 80 (where I'm trying to finish up single-band DXCC), it goes direct, otherwise it goes via the WF5E Service if it's just a new band or mode. If it's to a country that I've already got confirmed on both phone and CW and that band, it goes via the ARRL Outgoing system.

Did that tell you more than you wanted to know? <grin>

Good luck.. good DX.. and great QSL returns!

Indiana seems to be the king of 6m repeaters. Indianapolis has
over 6 of them. The advantage of the 50 Mhz band is a very good
selection of used commerical and military equipment. Brings back
the good olde days of hardware hacking.

RIGHT while I have had the flue over the last few days and have not checked this little posting (which is growing into a monster !!!!) for a little while, I was amazed to see it has grown from my inital posting to 89 thus far!!!!!!!! Going from Internet access via Packet radio, somthing about govermnet should pay for everything, to TV, to Vehicles GAS etc etc etc HUH!!!!!! MAN!!!!!

OK well I found out what I wanted to find out, best help was from David TSE, and a link to force9 etc, i was able to find out that the technology IS available to actcheive FULL internet connection via Packet Radio. NOW wheather the HAM laws on Packet radio contents will allow internet access in England, and IF things might be changing (loads thing changing in this country NEW labour) new laws etc etc and wheather there is a line of site gateway from my location within say 60-100 miles of me, has all yet to be determined.

But my initial thoughts of wheather the technology exits has been answered YES IT IS. I Have found that it is Possible.

It may interest all who have responed to my initail posting that i
have found another way of connecting to the net which if is successful
will give me 120hours/month FULL internet access VIA ISP through a
MOBILE PHONE FOR JUST £32/month, which price also INCLUDES an ISP
monthly charge of £12...YES I KNOW BUT IT IS TRUE.

ITS not full free access but 120 hours FULL Internet access for £32
all in aint bad at all PLUS its legal.

So 89 Posting upto now....I wonder what the world record is on postings to a NewsNET posting is? Anyone know? Wanna Join this Fast growing Posting?

DO TRY AND KEEP IT TO DIFFERENT WAYS OF CONNECTING TO THE NET, USING ANY FORM OF TECH. RADIO, MICROWAVE, CABLE, TELEPHONE, SAT, ETC ETC ETC WHATEVER. IT MIGHT TURN INTO A USEFUL GUIDE YOU NEVER KNOW.

IF YOU CAN GATHER YOUR DATA AND POST ALL WILL BENEFIT, COULD BE GOOD THIS.WILL HAVE TO WAIT AND SEE.

DREAD TO THINK WHAT WILL HAPPEN AFTER THIS POSTING!!!!!!! hehehee

TO ALL

Cheers

IAN

Amateur radio will survive Burt and his ramblings without any problems because he comes across as a crackpot and will be treated as such by the press. The thing that bothers me is that Burt claims to be a teacher. I have to wonder how he is effecting his students with his views. I also wonder if the school administrators and parents know the type of personality that is in a position to influence young and impressionable minds?

Author: Daniel WCC, 9V1ZV
Date: 4 February 1994
Subject: Band extension mod for FRG-9600/965

Foreword

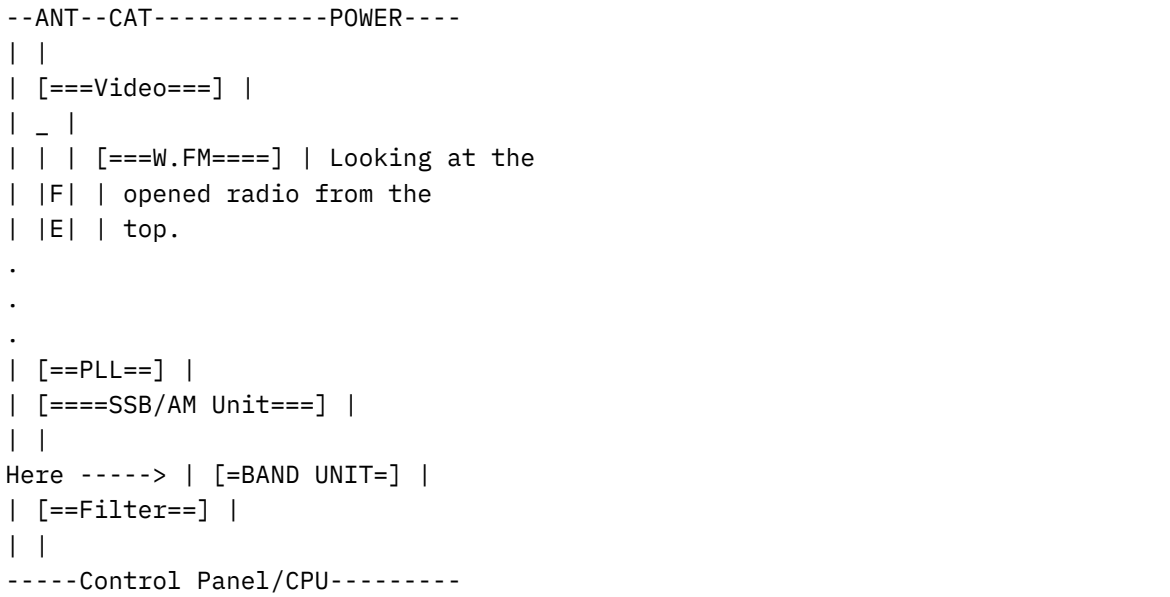
Since I bought my second hand FRG-9600, I have been fervently looking for mods for the radio. I have seen mods for so many other scanners, I could not believe there was not even one for the FRG-9600. This was quite disappointing as I liked the idea of making mods to radio. Recently I received my service manual for the radio and the result of which is this simple mod. All you FRG-9600 people out there, use your creativity. I am not sure if opening up the radio and performing the mod will void your warranty so you may want to check it out first. I can only say that this mod works perfectly for me but will not accept responsibility if you destroy your radio by your own mistakes.

Description

The original range of the FRG-9600/965 was from 60 mHz to 905 mHz. Looking at the circuit, however, revealed that YAESU had originally designed the radio to cover HF as well. Not only that, it also had coverage up to 950 mHz. I suspect that there had originally been intended a module for HF frequencies which is supposed to fit into the empty slot (J8001/J9001) next to the VHF/UHF front-end unit. For some reason, this option never materialized, maybe for commercial reasons! Anyway, it seems that some provision had been made on the Band Unit module to go ahead and make use of these bands anyway without the dedicated HF front-end. Thus, we can now enable reception from 20 mHz to 950 mHz with no gaps in between. Unfortunately, the sensitivity is not fantastic at the fringe frequencies but nevertheless signals can still be received. If you have a computer on, the RF emmission from the PC is likely to drown out most of the 30 mHz band anyways so you may want to go manual on these bands. The 905-950 band is more acceptable and works fine pulling in cellular on those channels. You will probably hear some of the RFI generated by the radio's on-borad CPU here and there also.

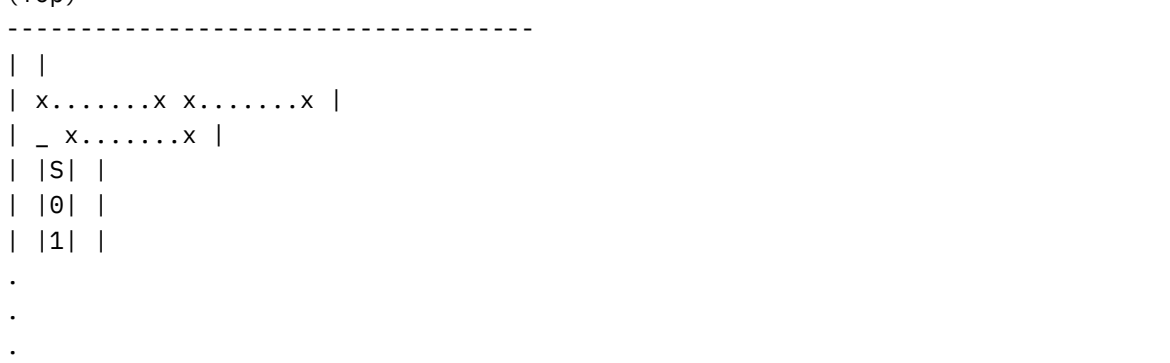
Modification

The mod itself involves soldering in 3 jumper wires onto the Band-Unit.
The Band-Unit is the closest module to you on the left. Carefully remove the cover of the radio by unscrewing the 4 screws holding down the top cover. In order to remove the cover, you need to push it back about 15 mm before lifting it so be sure not to apply undue force. Be sure to remove the power supply before beginning.



This gives you the idea of where the Band Unit module is located. The actual module names are printed on the main PCB so take a closer peek and you will see which one is which easily.

Now that you have identified the module, look carefully at it. You should
see that there are some holes near the top which are drilled but unoccupied.



The above diagram shows the component side of the Band Unit which is what you should see looking at it from the front of your radio. Note that the slot marked S01 is unoccupied. If your's has a switch on it, make sure it's open because it disables the 450-950 mHz bands if closed. If your radio does not have these bands, check this switch and also check to see if it has been hard-wired in the closed position.

The "x" indicated where the unoccupied holes are and the "........" indicates the jumpers you must make. If the jumper is already there, then you need not do anything to the radio. The jumper on the top left is to enable 905-950 mHz. The one on the top right is to enable the top right enables the 30-60 mHz range and finally the bottom right jumper enables the 20-30 mHz range. Note, I am not too sure if the mid HF transition is at 30 mHz, could be something else too. You can try for yourself, it is not critical since I put in all three jumpers for my radio. The holes are covered by solder already so you cannot easily insert your jumper wires. Ideally, use a solder-sucker or a solder-wick to remove excess solder from the holes to uncover it first. Do not apply too much heat as the surface mounted transistor nearby may melt or be destroyed. Once you have cleared the hole, slowly insert the pre-bent jumper wires into the holes starting with the one at the bottom right. Remember to clip off excess wire and do not let the wire drop into the radio and possibly short something. Use thin solder and do not apply too much. Make sure that your jumper wires are clean so that the solder will adhere to it easily.

The circuit of the Band Unit suggests that it is actually possible to enable a range even lower that 20 mHz. This is quite pointless however since the front-end is really not suitable for such low frequencies and it is unlike that you can hear anything useful even if enable. If you are interested however, contact me by e-mail. I'll give you more details.

Conclusion

Replace the cover after making sure that no bits of wire or solder are left inside the radio. Now you are ready for fun (provided you did it right). Try tuning from 19.999 (no sound) upwards and see if you get anything interesting. Usually you'll just get RFI. But when you reach about 40 mHz, you may be picking up cordless phones and walky-talkies. Once you are satisfied that works, try tuning from 905 mHz up and see if you get any cellular. Have fun while I study the circuits for more possible mods. I have received news that some FRG-9600s will not permit you to tune manually or by frequency entry, out-of-band frequencies. These frequencies can be accessed using the CAT controller program SCANNER.COM (or SCAN88.COM for XTs) with the very easy to construct interface. Meanwhile I will look into enabling tuning using the dial and keypad. This should be the next mod if its possible.

If you own one of these radios, you may want to check out my controller program and interface (easy construction) for the CAT control of the radio. The program brings FRG-9600 back into competition with the newest scanners.

I've received feedback that although the above mod allowed the radio to tune the entire range, the dial seems restricted. This restriction can be overcome by using the interface for tuning. Alternatively, you might try to reset the machine by turning off the battery for a couple of minutes to see if upon restarting, the MPU recognizes the new bands. This can be done by switching off the internal battery using the switch at the top right hand side of the front panel, under the top cover. There is a tiny slide switch there.

Have fun.

Amazing News!

A friend of mine called the fine folks at ADI-Premier Communications today to ask some questions about their products. The tech on the phone told him about some of what they have coming out. He was excited to learn, and I was too, that they have a new radio about to hit the streets -- a low cost HF rig!

I was told that the radio would have all 9 HF bands, general coverage receive, and be very easy to use. The folks at ADI also said that the radio would be very simple, and would not have many of the more advanced features of other radios. The price? UNDER $500!

I can't wait to see the new radio! With the sunspots coming back, and ADI's new low cost HR radio coming out, maybe some guys like me will finally be able to afford to get on HF!

This isn't North America. We don't _have_ to do everything
you Yanks do.

We don't have the capacity to support all the great unwashed
being on-line 24+ hours a day. I'd rather pay for local calls
(which are dirt cheap anyway) than suffer the problems caused
by under capacity at the telephone- and ISP-levels.

We all know what OH2BUA is really great.
But that is only for those who have an internet access next to their rig.
Many of us are not fortunate enough or wealthy enough to
maintain 24-hr internet connection from home.

So, what I think is, lacking local DX-spot cluster,
to make the reverse procoess of what OH2BUA is doing.
Namely, from internet web to packet.

Then one can put a packet server where there is free
internet connection (schools or research org) and the
server serves the local DX community.

I don't think this idea is revolutionay and therefore
it is very likely somebody have already implemented it.

Let me know if you know.

Thanks.

Dear Prospective Customers,

We are a newly formed company dealing with radio communications equipment for both commercial and amateur based in Kuala Lumpur, Malaysia. We are offering these equipments for sale at a very special discounted price due stock clearance. We are able to sell at a very competitive price due to purchasing them in large lots from Japan and due to cost of the products quoted in the local currency before.

All products are brand new and fully guaranteed. Eg. HF transceiver from ICOM (IC-706 MkII) is being offered at US$1120.00 (excluding freight) against the current price of US$1289.00 offered by other radio dealers in the US. Please allow 1 week delivery after clearance of checks. We accept checks in US funds only.

For quotes of all other products available and further queries, please e-mail to hamsupplies@trust-me.com or phone ++ 603 9439284 fax: ++ 603 2513775 attn: Farez . We will promptly entertain any of your queries.

Sincerely,

Megat Farez (Managing Director)

Me too. I often have to send three or four times before it actually
appears. Sometimes it takes a while and you end up spotting the same
thing three times.

646. *NEW* DxBase Mailing List

Newsgroup: rec.radio.amateur.dx
Date: 1998-02-26 00:00:00 UTC
From: "Brian K. Short" <shortckt@primenet.com>
Message-ID: <34F5A974.42CEF0D8@primenet.com>
Source record: 30011

NEW DxBase Mailing List

DxBase is a mailing list (reflector) open to all radio
amateurs (or others) for discussion of DxBase.

TO: majordomo@qth.net
SUBJECT:
BODY: subscribe dxbase

To be removed from the mailing list:

TO: majordomo@qth.net
SUBJECT:
BODY: unsubscribe dxbase

To post information/questions to the list:

TO: dxbase@qth.net

This mailing list is sponsored by Al Waller (K3TKJ).

Please address any questions to: ThomasJ@shbank.com

QTH.Net Digests and Archives (for subscribers)
k7on@qsl.net

What about Digests and Archives?

A. Digests

All lists at QTH.Net have digests available.

You can subscribe to a digest and periodically receive the compiled
messages rather than individual messages.

All list digests are configured for a size limit of 40,000 bytes.
However, most of the files are around 16k to 30k. This is because
majordomo will NOT send a digest larger than the limit. If a new
message pushes beyond the limit, it sends the accumulated, putting
the new message in the NEXT digest.

If you are switching from non-digest to digest, you must unsubscribe
dxbase and subscribe dxbase-digest.

It is an entirely seperate subscription, but both digest and non-digest
subscribers are permitted to post to the non-digest list.

TO: majordomo@qth.net
SUBJECT:
BODY: subscribe dxbase-digest
unsubscribe dxbase

B. Archives

All messages sent via reflector are archived and are available for
access through majordomo.

You can send a command to majordomo@qth.net and in the body type:

index dxbase-digest

and get a list of files that are available by request.

Here is an example:

```
>>>> index dxbase-digest
total 116
-rw-rw---- 1 majordom 45 14169 Sep 2 18:09 v01.n042
-rw-rw---- 1 majordom 45 18100 Sep 3 11:27 v01.n043
-rw-rw---- 1 majordom 45 15322 Sep 4 14:11 v01.n044
-rw-rw---- 1 majordom 45 13490 Sep 6 11:15 v01.n045
-rw-rw---- 1 majordom 45 16382 Sep 9 18:39 v01.n046
-rw-rw---- 1 majordom 45 14823 Sep 11 08:40 v01.n047
-rw-rw---- 1 majordom 45 16872 Sep 12 01:04 v01.n048
```

To retrieve one of these files, send an email to majordomo@qth.net.

In the body of the message, type:

get dxbase-digest v01.n048

The file will be emailed to you, automagically!

C. Archives on WWW

You may view the archives online.

Point your web browser to: http://www.qth.net/dxbase-digest.archive

From the comments I get the remote post on the world page is not working. I tried again today but no luck..

Someone needs to tell him...he leaves no way to contact him. Either you don't post or as one guy says the same spot comes up multiple times (he posted it just to see what happens.)

This is no good and either it should work or he should take it out.

Dave K4JRB

Instead of using OH2BUA, use a regular cluster node that's connected
to the internet. OH2BUA seems to always have everything delayed,
probably because of the software they use.

You already are on the internet, all you need is a Telnet program. There
is a crude one built into Windows 95.

You can download a good telnet program which is shareware at
http://starbase.neosoft.com/~zkrr01/ It's called NETTERM and it works great for

cluster access. You have to set up a few options, use OPTIONS then SETUP then
DESKTOP SETTINGS and make sure LOCAL ECHO is ON, AUTOWRAP is ON, and
SELECT LINEMODE FOR LOCAL INPUT is checked. Also set BACKSPACE IS to
BACKSPACE.

One of the cluster nodes you can Telnet to is WU3V (moe.wu3v.ampr.org) and
there are lists of others available on the internet.

>Steve KF2TI
>KF2TI@planet.net
>http://www.planet.net/adell

Geez, Stevie, myself and WH0AAV worked a bunch of east coast stations
last nite, matter of fact we concentrated on W1's and W2's. We worked a
bunch of stations in NJ, although I am not sure if it was Northern or Southern
New Jersey. Also worked about 150 U.S. stations on 80 CW during the
contest last weekend, most of whom were on the east coast. Last nite I
even spent five minutes digging K2JMY's callsign out of the noise (he's in
Poughkeepsie, NY) only to find I had worked him a month ago on 75 SSB.
We really appreciate it when the east coast guys help us sharpen our
listening skills by calling us three or four times a week with 33 signals....

The only stations we fail to acknowledge are the ones we can't hear.....
All the members of the Mariana Islands DX Association are from the old
school of DX'ing - we only work stations we can hear - we don't believe in
letting someone make us a list of stations we can't hear so we can work
them too.

About the only things I can suggest are A) QRO, B) get rid of the Cushcrud
vertical and put up a real antenna, or C) go to 3795.0 and get on the list to
work V85HG - one of the JA's with the 3 element beams will forward your callsign
and signal report for you - the new concept in DX'ing - callsign/signal report
store and forward system. C may be your best option.

Here's the way it works. When the JA with the big antenna tells you it's your
turn, you say 'V85HG this is KF2TI last heard you were 57 57 57 OVER OVER'.
Then there will be a moment of silence, after which, the JA List Manager will
say 'V85HG did you get your 57 report from KF2TI ?' Then V85HG will say
'YEA YEA I GOT IT !!'. He will then proceed to give you a report. Don't repeat
the report whatever you do. Just say 'QSL QSL THANKS FOR THE NEW ONE',
after which the JA List Manager with the big three element beam will say
'GOOD CONTACT !!'. The QSL card will not reflect that the store and forward
system was used, so it will still count for your DXCC just like a real contact.

Anyway, we'll be on again tonite, at your sunrise. Maybe you can go to a friends house and use his station......

73, Jim KH2D

I've never used any ADI equipment, are their radios any good?

I guess the real question is, Can an HF Radio for under $500 be any good?
(I know we'll have to wait and see; assuming that the rurmor is true.)

> too, that they have a new radio about to hit the streets -- a low cost HF
rig!

The fact is that we ARE seriously CONSIDERING an HF radio. We feel strongly that there is a market for a very low cost, scaled-down radio with general coverage receive. It would make a great starter radio, as well as provide an alternative for folks that are fed up with the extremely complicated and expensive "contester's" radios being produced by other manufacturers.

We believe that there is a huge oppurtunity for this type of radio, given the upswing of the new sunspot cycle, the record high influx of new hams in the last 8 years, and the fact that no other manufacturer offers such a simple "starter" rig.

At this point we are soliciting comments from the ham radio community. We would like to know if hams in general would be interested in this type of radio, and, if so, what features they would like to see included and which features they could do without.

Of course, the more features that are included in the radio, the more expensive it would be. Our target price on a radio like this would be something like $500 or LESS retail, so we'd have to pick and choose the features we include very carefully in order to keep the cost of the unit down.

Any comments or suggestions regarding this project can be e-mailed to <premier@adi-radio.com>

I see the infamous Burton Fisher is a celebrity in this news group as well:)
He loves being around hams doesn't he.

If someone can supply the software, I would be consider running the cluster on our company's internet servers. We're located in the midwest; the equipment and connections are fast and reliable; and maybe it would a better location.

Hmmm tell me about the topic. I seriously doubt that we want FULL Internet
access via packet radio in the first place, considering we have had our own
type of Internet long before the Internet has become a household word.

>(I know we'll have to wait and see; assuming that the rurmor is true.)
>

Beauty is in the eyes of the beholder. There are many factors people
would like to compare before making a conclusive answer. Some people
will look at:

Brand Name (Reputation? Loyalists?)
Service Department (turn around time, cost, etc.)
Construction of the radio (size, and etc)
Receiver Capabality (adhere to the spec. or not)
Transmitter Capabality (dido)
Additional features (knobs, filters, and other options)
Appearance
Overall cost (Expensive options? Very important to many people.)

All of the above?

If budget is a major concern, then a more cautious decision making
process might be needed. Otherwise, look for some higher class rigs;
unless it's going to be a back up or a mobile rig.
Best 73!

Well, I just purchased a ADI AR-146 two mtr mobile and am very impressed
I think it is a Kenwood TH-241a that was CLONED but has all the options
that Kenwood charged for as STANDARD. I opened up the radio and am
impressed with the quality of construction. I got NO INTERMOD like I got
with the ICOM 2000H that boasts it is Intermod resistent. BTW, I paid
$199 at HRO. SUCH A DEAL.

I would like to purchase a $500 mobile type radio like the Kenwood TS-50
or the Alinco DX-70T. I realize some features (that are seldom used)
will have to be eliminated but I would be game for a radio like that.
Any other comments????

73's Steve NS1R

Ivor,
Without doubt, the American who replied is confusing Beer with Lager!
Lager needs to be drunk cold, but as for Beer, esp. Real Ale as you stated,
it's optimum temp is nowhere near that of Lager.
A nice pint of Dogbolter would go down fine right now!

Alan

No, no. A buffoon is a musical instrument, a member of the woodwind
family. I play one. Can't help it, your honour. It's known as a faggot
in Germany.

```
. ======================
*** The Daily DX ***
======================
Volume 2 Number 39
February 27, 1998
Edited by Bernie McClenny, W3UR

----------------------------------------------------------------------

Headlines

----------------------------------------------------------------------

Michael, DF8AN, will be active from several islands in the Pacific
Ocean between 27 February through 28 March. He will start out in the
Philippines as DU1/DF8AN until 11 March. From 11 to 14 March he will
operate from the island of Guam as KH2/DF8AN. Next he will go to
Micronesia (V6) until 22 March. No callsign was mentioned for this
stop. His final stop will be on the island of Koror (IOTA OC-009)
which counts for Palau. QSLs for all of these operations go to
DF8AN, Michael Noertemann, Neustadt 18, D-37154 Northeim, GERMANY.

The Maldives are quickly becoming a very popular island for
DXpeditioners in the Indian Ocean. Jan, OZ1JKK, is currently active
as 8Q7DX on 20 meters from Male.

Phil Weaver, VR2CT/9M6CT, left Kota Kinabalu, East Malaysia yesterday
and is headed for Bangkok, Thailand where he hopes to be on the air
as HS0/G4JMB. Starting 29 March he will be active again from 5 ï¿½
weeks as 9M6CT. This trip he will concentrate on 40 and 80 meters.

In yesterdays issue of The Daily DX it was reported that OH2BAD would
be the QSL manager for the upcoming OH0W activity in the ARRL SSB DX
Contest and the CQ WPX SSB Contest. A recent change has been made
and now Pasi, OH2IW, will be handling the chores for those two
operations. QSL may be sent to Pasi Luoma-aho, OH2IW, Vallikuja
10 A 8, 02600 Espoo, FINLAND.

Members of the Florida Contest Club (FCC) will be active from
Guantanamo Bay, Cuba as KG4GC during the ARRL SSB DX Contest on 7 and
8 March. The team will consist of Doug, W4OX/KG4OX, Bill,
KX4WW/KG4WW, Bill, W4WX/KG4WX, and Rusty WV4N/KG4AU. They will
arrive on 4 March and stay for one week. Look for them to be active
on all bands and modes before and after the contest. QSL cards for
KG4GC go to Bill Gallier, W4WX, 4094 Sandy Run Drive E., Middleburg,
FL 32068. All others go to home calls.
```

Cedric, HB9HFN, and Daniel, HB9DLZ, have returned from their two island pacific trip from Tonga and Samoa. The logs for the recent 5W0FN, 5W0LZ, A35FN and A35LZ are now available at http://www.qsl.net/hb9hfn/log/search.html Remember to send either 1 IRC or 2 US $ with your direct QSL card request. Bureau cards are accepted.

The Oklahoma DX Association will have two of its members active from Antigua (V2) from 25 May to 2 June. Jim, K5TT (ex WV5S, and Dave, W5AO (ex N5CG), hope to be assigned V26TT and V26GG. The two will be active on all bands before and after the CQ WPX CW Contest, which they will also partake in. QSL cards for V26TT will go to K5TT and cards for V26GG go to Box 88, Morris, OK 74445-0088.

Pete, OH2PM, is currently active as OH2PM/BY1QH. He has been on 160 meters. QSL cards should go to Pertti Simovaara, Asia Pacific Building Apt 1106, No 8, Ya Bao Lu, Chaoyang District, Beijing 100020 Peoples Republic of China.

Sigi, DL7DF, has been active on CW from the Dominican Republic as DL7DF/HI3. He will be there until 5 March. QSL via DL7DF.

Henning, OZ2CU, is active from Katmandu, Nepal as 9N1CU for two to three years. He is using a IC-735 and a 4 element beam at 35 feet. Look for him on 15, 20 and 80 meters. Harry, GM0UTD, plans to be active in Nepal from 1 to 19 March running QRP. He will probably be on 12, 15, 17, 20, 30 and 40 meters. QSL via GM0UTD.

Dayton

Mark your calendars to stop by The Daily DX booth this year. We will be inside at booth # 520 on 15, 16 and 17 May. I look forward to meeting each of you for an eyeball QSO. Speaking of Dayton both the DX and Contest forums will be held at a local high school and not on the Hara Arena grounds. Transportation will be available between the high school and the Hamvention. de Bernie, W3UR.

QSN

5R8EW - MADAGASCAR - West Coast US, East Coast US and Europeans report working this on 24978 between 15:00 and 16:00Z. Look for him today as conditions should be similar to yesterday.

9M6BG- EAST MALAYSIA - Look for Brett on 24895 between 23:00 and 01:00Z. Also check 18069 at 13:00 and 23:00Z. QSL via VS6BG.

FH/DL1DA - MAYOTTE - Try 5 KHz up from the bottom of the CW bands. He has been on 15 and 30 meters.

FT5WG - CROZET - Those still looking for this one should
try 14278 daily between 13:00 and 17:30Z. US
stations should try longpath between 13:00 and
15:00Z.

JT1CO - MONGOLIA - Was on 10103 at 14:00Z.

N4BQW/KH5K - KINGMAN REEF - Chuck was here for about 24 hours.
His activity was mostly on 20 meters SSB on 14195.
He was on that frequency from 00:00 to 10:00Z,
17:00 to 21:00Z and from 22:00 to 01:15Z today when
he announced he was leaving the island. He did
make some QSOs on 40 meters SSB between 11:00 and
12:00Z. QSL via WA4FFW.

TL8CK - CENTRAL AFRICAN REPUBLIC - Was working Europe on
24960 from 13:00 to 14:00Z. QSL via F6EWM.

ZK - SOUTH COOK ISLANDS - The OKDXF boys are now active
as ZK1KTT and ZK1TNN. Look for them mostly on CW.

ZL7DK - CHATHAM ISLAND - These guys are really showing
everyone how to run a DXpedition. They have got
both the signal and the operators to do the trick.
East Coast stations report working them on 24893
from 20:00 to 00:00Z.

IOTA

The following IOTA stations were active yesterday.

> dql@slip.net

Welcome to a really fun aspect of Amateur radio....
Stateside manager...

Include a SASE with your card. Depending on the contact, you may want to include a dollar or two. Personally, if the card is for a big dx-pedition, like Heard I or the upcoming Palmyra, I'll include at least a dollar per contact to help out. If I see that I am making a number of contact with the same station on different bands, like XT2DP, whom I've worked 6 times, I'll put in a couple of dollars to help cover a bit of the managers costs. It's purely voluntary and is entirely up to you as how you want to handle that, BUT, the SASE is a given.

Foreign QSL manager...

Get some Overseas Airmail envelopes..Bill Plum sells a nice set, where the return fits inside the outgoing without having to fold. Now the tricky part. You should enclose on of the following (1) a dollar or (2) at an IRC or (3) return postage of the country you are sending the card to.

Dollars are good except in some countries, they have a habit of disappearing!! Plus some countries, the exchange rate is lower and you'll need 2 dollars ($2 bills are great in this case). Be sure to put the $$ inside the inner envelope as well as the card as it will prevent someone from holding the envelope to the light to look inside.

IRC's are ok, except the are not cheap $1.05 each and they are not available at all post offices. If you know a qsl manager, they from time to time will sell the IRC's they get..figure about 80 cents each. Granbted they're used but as long as they are not redeemed they are still good. In fact, I've had IRC's from the late 80's show up.

Probably the best is a SASE with foreign postage attached. Bill Plum sells foreign postage stamps and they work great. A personal trick is to

find out how might be traveling abroad and have them brings back some stamps. I keep a supply of French, German and Japan airmail stamps for just such a purpose.

I am sure other will contribute, but the above was taught to be by a number of New Jersey DX Association members...a club with more Honor Roll members than any other DX Association in the world if not the US. Out of 68 members, there are 54 Honor Roll members including the #1 DX'er with 383 confirmed.

73 es have fun

Not really. We had a message store-and-forwarding system, and that's
about it. The opportunities that a real network provides are
substantially greater - digital voice, video, web access, etc.

Dave,

Glad to hear them on CW--worked them on 10, 12, and 15 meters. Wish I was setup for RTTY as they had a great signal here on 15 meters this afternoon. I live in an antenna restricted area and have managed to hide a random wire in the trees up about 15 feet. Still managed DXCC and WAS with 100 watts. Even worked 33 states on 160 meters! I can't work much phone--and don't need to. I wonder if the KH9 plans CW???

While I hope they work some SSB--I'll not have to fight all the QRM trying to get it in my log.

Hoping to work them on 40 meters tonight!

2kw 80-10m desktop amp runs on 110/220vac with a pair of 8122. Spare tubes, spare band switch and original manual. $700 plus shipping or will trade for quality 6m ssb/cw transceiver.

Worked fine last time used (1993). It's been on the shelf ever since. If you're in the Chicago area, we can test at your location, otherwise, sold as-is.

- yeah, the ADI HF radio should be compact like IC-706 (Mk II).

- the radio must be digital... not analog.

- HF + 6m (+ 2m) will be better than HF only

- 50W max or so

- one button, one function.

This may be a dup in some newsgroups, and i applogize.

I have an Alinco 599t, and a KAM+.

Receiving is no problem

Transmitting from cpu to tnc, no problem, the tx lights up on the tnc, but the radio doesn't key up.

I have tried to reset the tnc via pulling the battery. I need to know if anyone has the pinout for the alinco. The cord I have is a premade cord, and the dealer said it was for alinco.

Can anyone help.

Thanks, and again sorry for the duplicate in some news groups

>- yeah, the ADI HF radio should be compact like IC-706 (Mk II).

I'd be willing to trade off minaturization against superior thermal
sinking.

>- the radio must be digital... not analog.

I'd like an all digital radio, but the technology isn't quite up to
building one yet. A good sound analog design would be fine.
The receiver front end should be bulletproof, and upconversion
should be employed to avoid excessive birdies. Perhaps DSP
could be used in the second IF to save the costs of a selection
of filters, ala Kachina. But I'd be satisfied with a basic 2.1 kHz
filter and a 500 Hz filter in an analog low second IF.

>- HF + 6m (+ 2m) will be better than HF only

I disagree with this. HF-only makes more sense in a low
cost radio. Adding VHF to the radio increases cost and
complexity.

>- 50W max or so

I disagree with this also. A HF radio should be a minimum
of 100 watts. That allows barefoot operation on all HF bands
in SSB, and will drive available amps on those occasions
when that is merited. Ideally the radio should be large enough
to provide adequate heatsinking without the need for a fan.

>- one button, one function.

That requires a large radio, or few functions. I don't have
a problem with intelligently designed menus, the IC-706
is a good example of this. OTOH, for a basic low cost

radio, there needn't be a huge number of operator functions
or operator controls. Every knob and switch costs money.

SB DX @ WW $OPDX.346
Ohio/Penn DX Bulletin No. 346

The Ohio/Penn Dx PacketCluster
DX Bulletin No. 346
BID: $OPDX.346
March 2, 1998
Editor Tedd Mirgliotta, KB8NW
Provided by BARF-80 BBS Cleveland, Ohio
Online at 440-237-8208 28.8k-1200 Baud 8/N/1 (New Area Code!)

Thanks to the Northern Ohio Amateur Radio Society, Northern Ohio DX Association, Ohio/Penn PacketCluster Network, W1LW, WB2RAJ/WB2YQH & The 59(9) DXReport, W4WX, N5OGP, KB6NAN, N6DCD, NO6X, W6OAT, AA7KE, CT1EAT, DJ7IK, DK9KX, EA2CLU, EA5XX, G4BUE & DX News Sheet, G0PSE, HA0HW, HA0KHW, HB9DLE, JA1ELY, LU1DZ, ON4WW, SV1NA, UA2FZ and YU1AB following DX information.

3D2, FIJI. After their operations from West Samoa (See 5W below), Slav/ OK1TN, Vrata/OK1KT, and Vasel/OK1VD of the OK DX Foundation (OKDXF), will now be active from Nadi, March 24th through April 1st, as 3D2KT and 3D2TN. Activity will be on CW/SSB on 160-6 meters with beams and amplifiers. QSL via OKDXF, P.O. Box 73, Bradlec 293 06, Mlada Boleslav, Czech Republic. ADDED NOTE: They may try to go to Rotuma Island. This operation depends on finding transportation.

3D2, FIJI. Mamoru, 7N1RTO (ex-JG2EBN), will be traveling here on business and hopes to operate as 3D2ME in his spare time. Look for him March 8-11th on 20 or 15 meters SSB. QSL via JARL Bureau or direct to his new address: Mamoru Endo, 102-83-2 Kizuki-Omachi, Kawasaki, 211-0031 Japan

5A21, LIBYA. By the time you read this the Belgian team of Tiny/ON4CAT, Frank/ON4CEL and Patrick/ON4APS will have met Ali and Abubaker, their Libyan friends at 5A1A, and be on the air using the special callsign 5A21PA. They will be active on all bands on CW, SSB and RTTY with 100 watts. Activity will last until March 7th. (ed. While writing the OPDX bulletin Sunday morning, most of the activity seems to be on 20, 15 and 17 meters so far.) For more information, check out their homepage: http://users.glo.be/~frankyb/5a21pa.html

5W, WESTERN SAMOA. The "DX News Sheet" reports Slav/OK1TN, Vrata/OK1KT, and Vasel/OK1VD, will be active March 14-23rd as 5W0SZ and 5W0VV from Apia. Activity will be on CW/SSB on 160-6 meters with beams and amplifiers. QSL via OKDXF.

7X, ALGERIA (also possible S0 trip). Mark, ON4WW (ex-9x4ww), reports he is going to 7X-land shortly. This location will be close to S0, Western Sahara, and he will try to operate from here also.

9Q, DEMOCRATIC REPUBLIC OF CONGO. Pat, 5N0T, and his XYL Nicole, 5N0YL, who were active from Nigeria, will arrive March 21st here. They will be active once they receive their licences. Hopefully this will be by the end of April. QSL both via F2YT.

A7, QATAR. The "59(9) DXReport" reports Dave, KC9IM, who is currently signing J52IM, expects to take up a new assignment in Doha soon. His callsign and other details have not been announced yet. QSL via KB9XN. Meanwhile, Jabor, A71BY, is active often on 20 meters SSB. Check 14175 kHz (or 14195 +/-) around 1345z. QSL via F5PYI.

BRAZILIAN GENERAL/IOTA DXPEDITION NEWS.......
RATONES ISLAND - Will be aired by PR5L, March 26-30th, using SSB and CW. Ratones Island is IOTA SA-026, and DIB 64. QSL via PP5LL.

SAO FRANCISCO ISLAND - Will be aired by PR5L, April 16-20th, using SSB and CW. Sao Francisco is SA-027, and DIB 08. QSL via PP5LL.

GUARAZES ISLAND - Will be aired by PT163MP, May 1-5 May, using SSB and CW. Guarazes Island is SA-026, and DIB 71. QSL via PP5LL. The special callsign PT163MP will be used to commemorate 163 years of freedom from the Military Police in Santa Catarina State, Brazil.

MEL ISALND - Will be aired by PQ5L, May 28-31st, using SSB and CW. Mel Island is SA-047, and DIB 24. QSL via PP5LL.

ADDED NOTES: Look for this islands on the usual IOTA frequencies:
CW - 3510, 7010, 14010, 21010, and 28110
SSB - 3760, 7060, 7260, 14280, 21260, and 28460.
Also PP5LL address is: LIRA, P.O.Box 08, 88010-970, FPOLIS-SC, Brazil

C42, CYPRUS. Operators UA2FB, UA2FF, and UA2FZ will once again use the special callsign C42A during the CQWW 160 SSB Contest. QSLs for the C42A operation will go to DK4VW CBA (maildrop only).

EA6, BALEARIC ISLANDS. The "59(9) DXReport" reports Vincent, EA6AEI, is active daily on 18150 and 24970 KHz from 1600-1700z.

ED, SPAIN. Operators EA5GRC, EA5GJT, EA5AQA, EA5CE, S01M and EA5XX will air the special callsign ED5WPX during the next CQ WPX Contest as a Multi/Single station from Spain.

GB0, ISLES OF SCILLY (ENGLAND). The Taunton and District ARC (TADARC) will be activating St. Marys, Isles of Scilly (IOTA EU-011), with the Special callsign GB0SM during the period April 25th through May 2nd. Four operators plan to maintain a 24 hours operation, with Icom IC737A, IC725 HF Transceivers on 160 to 10 meters. They will be using R7000 Vertical, wire dipoles and long wire antennas for CW and SSB modes. A VHF transceiver and 3 element 6 meters beam will also be used if VHF conditions are favorable. QSL via the bureau or direct to: G3WNI, Bill Lindsay-Smith, Way Close, Hemyock, Cullompton EX15 3QY, England

Bureau QSLs can also be obtained by E-mail to: tom@tctaylor.demon.co.uk

HB2, SWITZERLAND (Attention Prefix Hunters!). Sigi Bill, HB9DLE, President of the LETZI DX-group, reports the prefix "HB2" will be aired for the first time. The special callsign HB2CA will be used by the LETZI DX-group of Switzerland and will only appear on the bands during the major contests in 1998. The LETZI DX-group consists of twelve active DXers and contesters running a nice clubstation and celebrating the 20th anniversary of the club. QSL via bureau to the manager HB9DLE.

IRIS COLVIN, W6QL, SK. It is sad to report that well known DXer Iris Colvin, W6QL, became a "Silent Key (SK)" at the age of 83 on Wednesday, February 18th. She died peacefully at her home in Richmond, CA. Iris was renown as a prolific DXpeditioner, and along with her late husband Lloyd, W6KG, activated many of the world's rarest DXCC locations. She and Lloyd, also were avid QSLers and boasted the world's largest collection of cards -- all alphabetized and filed in cabinets which occupied an entire room in their home. Iris was a member of DXCC Honor Roll, president of the Yasme Foundation and a past president of the Northern California DX Club. She was inducted into the CQ DX Hall of Fame in November, 1976. OPDX and the members of NODXA, along with many DXers throughout the world will never forget the many QSOs/memories she had provided over the years. Dxers have lost a rare one!

J8, ST. VINCENT. EA2ADJ, EA2BP and EA2CLU, are making plans to be active here between March 21st and April 1st. This includes activity in the CQ WPX SSB Contest (March 28-29th) as J80R (Juliet eight zero Romeo). Before and after the contest, they will use the callsign J8/EA2BP on all bands on SSB/CW and RTTY.

JD, OGASAWARA. Look for JF1LGD/JD1 to be active mainly on SSB (some CW) from here. He has been active on the WARC bands (18 and 24 MHz) and also on 15 meters. Activity will last until the end of March. Meanwhile, look for JA1FUY, JF1GUQ, JA2CVF, JA1XVU and JI1FOL to be active March 14-17th. They will sign as homecall/JD1. Activity will be SSTV only on 20 and 15 meters.

JT, MONGOLIA (Update). As mentioned in OPDX.343, a Hungarian group who are members of the Hungarian Pannon DX Club will operate from Ulan-bator from May 17th through June 2th. The team which includes HA0HW, HA4GDO, HA6NL, HA7SK and HA7VK, plans to keep 2-3 stations simultaneously on the air 24 hours a day to maximize band openings on all HF bands. Activity will be on SSB, CW, and RTTY. Suggested frequencies will be:

CW - 1821, 3511, 7011, 10101, 14011, 18071, 21011, 24891 and 28011
SSB - 1841, 3789, 7089, 14189, 18141, 21289, 24941 and 28489
RTTY - 14079 and 21079 kHz

They state that if propagation allows them, they will work CW, 25 kHz from the bottom of the bands edge for U.S. stations to give more people a chance to work them. They also mention that they want to work on satellites such RS-10, 12, and 15, and if they can obtained LIS, they

want to work on 50 MHz. The callsign will be announced later. All operators will probably use their own suffixes, but the prefix is still not known yet. During the CQ WPX CW Contest weekend, they would like to use the special callsign JU0HA. For up-to-date announcements, check out the Web page of Pannon DXC at: http://www.dunanet.hu/pannondxc/
The DXpedition team would gratefully accept contributions from both individuals, clubs or firms. Contributors should contact Laci, HA0HW at: ha0khw@c3.hu or Laszlo Szabo, P.O.Box 24, Puspokladany, H-4151, Hungary.

KG4, GUANTANAMO BAY. A team from the Florida Contest Club (FCC) will be in GTMO for the ARRL International DX Contest March 7-8th. The team members are: Doug/KG4OX (W4OX), Bill/KG4WW (KX4WW), Bill/KG4GC (W4WX) and their host Rusty/KG4AU (WV4N). The callsign KG4GC will be used during the contest. Members will arrive on Wednesday, March 4th, and remain for one week. Members will be active on all bands and modes before and after the contest. QSL contest QSOs to Bill Gallier, KG4GC/W4WX, 4094 Sandy Run Drive E., Middleburg, Fl. 32068. Please include a SASE. Bureau cards will also be answered. QSL all others to home calls. Any comments or questions can be sent to: w4wx@bellsouth.net

KH1, BAKER ISLAND. The MKDXF and SSIDXG gang is underway to Baker Island where the USFWS will drop one team member off on Tuesday morning. They will then proceed to Howland and land, sometime between the 3rd to 5th of March.

KH6, HAWAII. Tamaki, JG1OUT, will be active from here as KH6/JG1OUT, March 7-10th. He will take a small AMP and a tri-band yagi. Look for him on 40-10 meters SSB/CW. QSL via JARL Bureau or direct to his callbook address.

LU1ZC, DECEPCTION ISLAND. Still need this one on 10 meters? Listen to LU1ZC's 10 meters beacon on 28212 kHz. The team there states propagation has been very poor. They continue to try to improve their contacts on 160, 80, 10, and 6 meters, but the propagation conditions are not helping. Most of the time they are on 15 and 30 meters which are the only useful bands. Last report, they have made a total of more than 35000 QSOs.

P5, NORTH KOREA. Toma, YU1AB, reports to OPDX that Rasa, YU1RL, has gone to Pyongyang, and he is there right now. He will be trying to get a licence from North Korea.

QSL INFO AND NEWS......
Walt, W1LW, reports to OPDX that for those who have been waiting for the K7K Kure Island QSLs (for contacts made in August and September 1997), they are reportedly back from the printer. It appears that AH0W is now sending them out. Walt states it is a very nice multifold QSL.

Dianna, KB6NAN, reports that DL5WM will be getting the 9X0A QSL cards out starting some time in March.

Hans, DK9KX, reports he wants to close the following logs by June 30th (1998):

GU5CKW, -CKX Guernsey 1978 & 1979
FH0FLP Mayotte 1980
FR0ACB/G, FR0ACC/G Glorioso Isl. 1980
PY0ZSD, -ZSH, -ZSG Peter & Paul Rocks 1983
DK9KX/S9 Sao Tome 1985
TY9SI Benin (SSB Only) 1988 April
5U7DX Niger 1988/89
3D2CR Conway Reef (SSB Only) 1989
ZS9AAA/1 Penguin Isl. 1990

QSL cards via the bureau or direct. For direct cards, please send two U.S. green stamps or one IRC, plus sase.

S92FC, S97A AND S91FC QSL STATUS. Francisco, CT1EAT, reports all direct requests for S92FC, S97A and S91FC have been mailed. Bureau requests are already processed and will be sent to bureau office (REP) next week. Further requests will be answered on a weekly basis, but PLEASE NOTE: Due an "unexplained" print error, the address printed on QSL is wrong. The correct adress is: P.O.Box 172, 7800 Beja, Portugal (Rua dos Acores,6-2Esq 7800 Beja is also valid.) Please include a SASE or a SAE + 1 IRC (or 1 USD) only!

John Devoldere, ON4UN, Member of the board of UBA (IARU) and QSL Manager for Belgium, states that cards sent to the VRB QSL Bureau (P.O.Box 94, B-2500 Lier, Belgium) does not guaranteed delivery to all members of the various radio societies in Belgium. Only the UBA QSL Bureau (IARU) at: UBA QSL Bureau, P.O.Box 900, B9000 Ghent, Belgium, can be guaranted delivery.

SV5, RHODES ISLAND. Yorgos, SV1NA, reports that two very active fellows, Jim, SV5EFB, and George, SV5DZG, have announced they will be active EVERY WEEKEND on 24 MHZ SSB only from the island of Rhodes. Their activity will continues for all 1998. They accept QSL cards via the SV bureau in Athens Greece.

V2, ANTIGUA. Two members of the Oklahoma DX Association will be operating from here May 26th until June 2nd. Jim, K5TT (ex-WV5S), and Dave, W5AO (ex-N5CG), will be operating 160 through 10 meters including the WARC bands. They will also enter the CQ WPX CW Contest. Probable callsigns are V26TT and V26GG, respectively. QSL information for V26TT is the K5TT/WV5S callbook address, and Box 88, Morris, OK 74445-0088 for V26GG. Additional information is available via k5tt@contesting.com.

XU, KAMPUCHEA (Well this is another interesting callsign!). Operator Hiroo, XU2A, is currently not active from here because he is now in Laos on business. He will be going back to XU this month and will be active after the WPX contest. He will be using the callsign XUX0 (XUX zero) from XU island.

Z3, MACEDONIA (former Yugoslav Rep.). Mike, NO6X, and Mike, NN6C, will be operating from here for about a period of about 2 weeks. Activity should be on all bands SSB/CW. Their main goal is the WPX SSB contest.

They should be on the air from about the 19th of March to the 1st of April. They will actually leave Los Angeles on the 18th and arrive back on the 2nd of April. Their expected callsigns are Z38/NO6X and Z38/NN6C outside of the WPX contest. During the contest, they will use Z38C. QSLs will go to home callsigns, and QSL for Z38C will be via NO6X.

On (Sat 28 Feb 1998) I had a QSO with UK Radio amateurs who
were happily sending packets to USA, to telnet to a group who included
a USA amateur who was in the same group - but using a regular ISP
internet connection!

It seems the guys who set up this "net" issue their own internet ID
number sets (the famous sets of digits separated by fullstops), except
the first number is 44 (instead of a 3-digit one). The "44" signifies
a amateur packet connection, and such an ID should not pass through
a server here as if it were a regular internet packet.

I tried telnet into this packet server, but I must have done it wrong.
My ISP accepted the address, but failed to connect. I freely admit
there is just so much I don't understand about how this is done. I
think that launching a packet to a US station by amateur radio
is unlikely to be illegal here, just because some other users of that
station happen to send their stuff via an internet route..

While this subject is interesting enough to roll up unusual numbers
of postings, I have got to admit that it is probably in the wrong group.
I'm not fussy or pedantic. Say it here if you like - but you may
expect some flak eventually from the net "hobby bobbies".

73s to all

For a low cost HF rig, I can live with it's larger size. Won't ask
for very much out of it.

>filter and a 500 Hz filter in an analog low second IF.
>

I like to see a low cost no thrill HF rig with good selectivity and
sensitivity -- build in. No optional filters. Do it once, and do it
right. DSP or not doesn't matter. The narrower the skirt and utimate
rejection is a plus. More features add cost to it.

>>- HF + 6m (+ 2m) will be better than HF only
>
>I disagree with this. HF-only makes more sense in a low

>complexity.
>

Any bells and wistles that add costs to the rig will be defeating the
purpose. A low cost HF rig is an HF rig, nothing more that that. I
don't mind if it doesn't have a general receiver.

>>- 50W max or so
>
>I disagree with this also. A HF radio should be a minimum
>of 100 watts. That allows barefoot operation on all HF bands
>in SSB, and will drive available amps on those occasions
>when that is merited. Ideally the radio should be large enough

>to provide adequate heatsinking without the need for a fan.
>

As a low cost HF rig, it should share 2 functions.

(1) Back up rig -- Most linears require 65W to drive. 50W is just
not quite there yet.

(2) Mobile rig -- A little edge to cut through the noise. Half a S
unit over the 50W version is not much to ask for.

>>- one button, one function.

Amen!

>That requires a large radio, or few functions. I don't have
>a problem with intelligently designed menus, the IC-706

>radio, there needn't be a huge number of operator functions
>or operator controls. Every knob and switch costs money.

I am not very sure if a basic, low cost HF rig should have a fancy LCD
display, a 16 bit CPU, or elaborate controls. I think that it should
be a solid performer with no thrills (even LED freq. readout), low
noise floor, high dynamic range, 100W clean Xmitter, PBT, notch, RIT,
all mode. A rig that can let the first time HAM's to make some decent
DX QSO's, as well as allowing the big guns to fire. Almost forget --
a complete service manual for future self maintainence would be the
icing on the cake.

Dave,

They'll likely be on SSB too. I heard them from 100 miles North of
Toronto at the bottom end of 10 meters at 2200-2300Z Sunday with a
massive pilup. He was S-7 with me.

It's good to see 10 finally coming back--it's going to be a blast!

Realize that a LCD display is usually cheaper than a good analog
dial and its mechanical linkages. An embedded uP costs under $5
and replaces a lot of the glue circuitry you'd need otherwise to
control the radio. It generally makes sense to use a DDS or PLL
instead of an analog crystal mixed LO. It costs less, and it allows
you to easily upconvert to avoid the birdies that are inevitable with
a crystal mixed LO. That saves a few bucks on shielding too.

In order to safeguard this species, the Saskatchewan Environment
and Resource Management have equiped some owl with radio
transmitter in order to track them during their migration .One owl
was found(dead) near McAllen,Texas by the Canadian Wildlife
Service.The transmitters should be good until September 1998. It
would be very helpfull and fun to scan those frequencies in
Mexico and central United State and Canada.
If you want to help in monitoring those vhf frequencies you will
find all the informations (and frequencies to be monitored)
at this site http://www.saglac.qc.ca/~morisset/owl.htm

718. QRM on 40m CW

Newsgroup: rec.radio.amateur.dx
Date: 1998-03-05 00:00:00 UTC
From: Chuck Vaughn <aa6g@aa6g.org>
Message-ID: <34FEC324.508D@aa6g.org>
Source record: 30133

I've noticed recently some QRM at the low end of 40m, about 7.002
around 03 to 04 UTC. It sounds like pulsed noise but has several
forms. Frequently it has about a 10% on and 90% off duty cycle with
pulses occurring about once a second. Sometimes it's inverted, 90%
on and 10% off. Sometimes it has double pulses. It also has other
less predicatable forms. It has periods when it's off altogether.
It's about as wide as a SSB signal. The beam heading is nearly due
north from the SF Bay area. It is not a local source as a friend 25
miles from me can hear it the same strength and from the same direction.

Anyone know what this is?

Tnx,

Chuck Vaughn - AA6G
<aa6g@aa6g.org>

I don't *know*, but I'll venture a guess. This could the the HAARP
system up in Alaska. That's an ionospheric heater using megawatts
of RF in the HF spectrum. The beam is aimed straight up, so you're
only getting some scatter.

Yes, the 48 continental states count as a country. And Alaska and
Hawaii each count as countries too. 73.

The Ukraine is in Europe.

Geographers consider the border between Europe and Asia
to follow a line along the Ural Mountains to the Kaspi Sea,
from there along the Caucasus, across the Black Sea and
through the Bosporus (Istanbul). Just for a quick orientation,
I'm not that familiar with the criteria for WAC, but I would
assume that they are similar.

Howdy Ed -- congrads on the DXCC achievement. Yep -- the continental USA
counts as a country as well as Alaska and Hawaii as separate countries.
For complete rules -- see URL:

I don't think so. First of all, the HAARP transmissions were never inside the amateur bands; and when the HAARP receiving tests were carried out the signals were not very strong. This garbage is S9+ many db here in Fresno CA. This signal totally wipes out the best DX part of the band. The Spanish-speaking SSB signals here are bad enough; we don't need this too!

Yes! Will also allow Web connects, such as OH2BUA's Web Cluster. I've
been using it for abt 2 years. Great program!

742. Logging & CAT control for FT840?

Newsgroup: rec.radio.amateur.dx
Date: 1998-03-07 00:00:00 UTC
From: Jonathan <jonk@jskent.com>
Message-ID: <350165B2.816424EF@jskent.com>
Source record: 30157

Hi all,
I'm setting up my HF station so I can start doing DX. I would like
to know if anyone out there has experience with a program(preferably
Win95) that can do the logging, interface with RAC callbook CD-ROM via
network, and control a Yaesu FT840 via the CAT interface. Any comments,
experiences, and reccommendations would be appreciated.
Thnx

Some 600 radio tubes that are in original boxes are for sale for $325.00 plus postage. These tubes represent a variety of brands including GE, Sylvania, Amperite, RCA, Amperex, Western Electric, Westinghouse, Ken-Rad, Mullard, Dumont and others. Included are mini, glass and metal tubes. I will include 200 unboxed/used tubes for free.

For a list of the tubes email spenders@lancnews.infi.net.

Hi Everybody
Having recently started to get interested in DX-listening, I am not familiar

with activity on all frequencies.
My question is, what is going on between 30 MHz and 54 MHz? I don't mean
in detail of cause. What about from 50 MHz and up to 88 MHz?
Yours
Olav Tveiten

Ok, it was just a guess. I don't hear it here on the East Coast. That hints that
it is probably a high angle signal from somewhere out there.

Speaking purely from a US perspective, the 30 MHz to 50 MHz range
is assigned to fixed point to point, land mobile, government, forestry,
and public safety services. (Maybe a few more too, it's a grab bag.)

50 MHz to 54 MHz is the US 6m amateur band.

And the area from 54 MHz to 88 MHz belongs to VHF TV broadcasting,
channels 2 thru 6, and to a few fixed point to point services, and RC model
control. TV is scheduled to leave this area by 2008 as TV moves to DTV
at upper VHF (ch 7 thru 13) and UHF. No one knows who'll get it then.

This is lots of time. The ARRL should be able to point
you at the right people. I found the turnaround time on this
to be very short - less than two weeks between sending the
paperwork to SSL and getting my reciprocal licence back.

Make sure your paperwork is in order and it will be painless.

Source record: 30163

I have noticed that many more non-North American countries are using "special" or new call signs that do not coinside with my maps and old alphabetical prefix list--beam headings. Does anyone know or have a CURRENT list of prefixes or have an internet address where I can obtain it.

I have a nice World Atlas by DARC Verlag, Baunatal . Callbook Inc.----but it only has an index of countries alphabetically and not by prefix. It seems the countries are too busy calling "CQ contest" and don't say where they are very often!

So does any one know where I can find a list that shows that TM1 is also France and ZZ2 is also Brazil!

Rudy, K8SWD (Michigan, USA)

The signal OPT SEL (J03 pin 1) needs to be pulled low to enable the
out-of-range freqs. Try looking at
http://www.geocites.com/CapeCanaveral/8516/expand.htm where I found the mod.

March 9, 1998
Editor Tedd Mirgliotta, KB8NW
Provided by BARF-80 BBS Cleveland, Ohio
Online at 440-237-8208 28.8k-1200 Baud 8/N/1 (New Area Code!)

Thanks to the Northern Ohio Amateur Radio Society, Northern Ohio DX Association, Ohio/Penn PacketCluster Network, K2WE, WB2RAJ/WB2YQH & The 59(9) DXReport, W3UR & The Daily DX, N4AA & QRZ DX, AI5P, N6ED, K7BV, EA5XX, EA2CLU, EI6FR, EI2GX, F5NOD, G3RTE, G3SWH, G3XTT, G4BUE & DX News Sheet, G4LVQ, IT9JPK, JARL, and YS1RRD following DX information.

3W, VIETNAM (plus an XU operation). Steve, K2WE, called the OPDX/BARF80 answering machine (number is listed below) and informed us that he and Les, W2LK, will be active this month as 3W6WE and 3W6LK, respectively. They will leave New York on March 20th and expect to be in Vietnam on the 22nd. Their callsigns will only be good for 6 days between March 25-31st. Before and after these days, they have access to use and operate from the Kasati Ham Club station 3W6KA. This station is equipped with kilo watt amp and a tri-band beam mounted on a 75 ft. tower. The station also has antennas for 40/80 meters. Also, they will be operating from the club station during the CQ WPX SSB Contest (March 28-29th). Steve mentioned that their license is good to operate for 24 hours a day on 80-10 meters. Also, their license has already been show to the League and has been approved. Steve stated that 3W6WE will probably be used on SSB and 3W6LK on CW. QSL 3W6WE via K2WE and 3W6LK via W2LK. QSL for the 3W6KA club station go to: Kasati Ham Radio Club, P.O. Box 76, Saigon, Vietnam. SPECIAL ADDED NOTE: Steve and Les will be the first Americans licensed to operate in Vietnam. This operation will be something special to Steve, who told OPDX that he is a Vietnam Vet and spent 2 1/2 years there (he states, "Almost 30 years to the date!"). Also, Steve mentions he may be going to XU-land with Hiroo, JA2EZB, who has helped in obtaining the licenses. Details should be forthcoming.

4H, PHILIPPINES. Robin, DU9RG, reports he will be active in the CQ WPX Contest as 4H9RG.

9M0C DXPEDITION WRAPUP. An excerpt from a press release by Don Field, G3XTT, reports that "the 9M0C operation closed down on Tuesday, February 24th, after making well over 65k QSOs with over 180 DXCC countries."

The DXpedition was highly successful in every respect with all goals being achieved. Don states full write-ups will appear in a number of the key magazines including CQ Ham Radio (Japan), Radio Communication (UK), Funk (Germany), etc. Also, 9M0C presentations are scheduled for Visalia, Dayton, Friedrichshafen, the RSGB HF Convention, the Clipperton DX Club Convention, VERON (Netherlands) and elsewhere. The full press release containing more details such as band QSOs break downs will be sent to all OPDX InterNet Subscribers.

AADX CONTEST, 1997 RESULTS. The Japan Amateur Radio League, Inc. (JARL) announced that the results of the 38th (1997) All Asian DX Contest have been uploaded to their Web site: http://www.jarl.or.jp/English/4_Library/A-4-3_Contests/1997/97index.htm They want to remind everyone the dates of the 1998 AADX Contest will be June 20-21st (CW) and September 5-6th (Phone). The rules for the contest will be same as last year except the dates.

ES80, ESTONIA. Currently there are several stations active using the special prefix ES80 in celebration of the 80th Anniversary of the Estonian Republic. Look for ES80R (QSL via ES7RE), ES80Q (via ES5MQ), ES80J (via ES1AX), ES80L (via ES6PL) and ES80M (via ES1QD). Length of their activity is unknown.

F, ILE DE SEIN (France). Jim, G3RTE, and Phil, G3SWH, will be active from the French island (IOTA EU-068) Friday, March 27th, until Monday, March 30th. They will be active on all bands 80-10 meters. Jim will use SSB on the usual IOTA frequencies as F/G3RTE/P and Phil will use CW as F/G3SWH/P. Special QSLs will be available for both calls from G3SWH (21 Dickensons Grove, Congresbury, Bristol, BS49 5HQ, U.K.) or via the RSGB bureau.

FH, MAYOTTE. The "DX News Sheet" reports that Conny, DL1DA, is expected to be active as FH/DL1DA, on CW and details on his stay are not known.

FK, NEW CALEDONIA. The "DX News Sheet" reports Philippe, F5PFO (ex-J28FO), will be active for the next three years beginning at the end of March. His callsign is not yet known.

FT5Z, AMSTERDAM & ST. PAUL ISLANDS. The Lyon DX Gang announces the next FT5Z DXpedition will take place in December, 1998. They have reportedly received all the authorizations for their one month operation. The callsign FT5ZH was issued to the team. Their main goal is to go there and ONLY operate. Activity will be 160-10 meters with operations on CW, SSB and RTTY. They will have amplifiers and beam antennas. The group is looking for sponsors and donations. Donations can be sent to their club Treasurer F5PXT (via postal order or registered mail): Mr. Eric Blanchard, 2 Rue Bichat, Bat 32, 69002 Lyon, France. For update-to-date information, check out the WEB site: http://perso.easynet.fr/~f5nod/ft5z.html

GM, BUTE ISLAND (Scotland). The Otley Amateur Radio Club will mount a DXpedition to this Scottish island (IOTA EU-123) for this year's IOTA Contest (July 25-26th). Their entry will be Multi/Single, and a special

call sign has been applied for. Operators will be G0SNV, G0NIG, G0WNT, M0ARK, M0AMA, G8HDN and G7RDJ.

IOTA 98. The IOTA Convention this year will be held May 1-3rd, at Las Palmas, Canary Islands. This is an unique opportunity to attend one of the most important conventions in Europe. For more information, check out the WEB site http://www.ure.es or send an e-mail to ure@ure.es.

J8 DXPEDITION UPDATE. Jose, EA2CLU, reports to OPDX that their expedition to St. Vincent and the Grenadines as J80R, which is set for March 21st through April 1st, has now a WEB site available. You can see up-to-date info, like callsigns/QSLs/frequencies, etc.. at: http://www.ctv.es/USERS/ea2clu/home.htm

OPERATIONS COMING TO AN END (Wow! What month for DX!). By the time you read this, the German group (ZL7DK) active from Chatham Island will be going QRT. Next to follow will be the Dateline DX Association group signing homecall/KH9 which will go QRT on March 11th. Also ending will be the SSIDXG and MKDXF group's KH1 operation which is scheduled to end on March 12th. All three operations have provided the DX ham community with excellent operations and excitement over the last few weeks.

PACIFIC DXPEDITIONS CONTINUE BY THE OKDX GROUP. The OKDX group should now be active from Tonga. Look for A35TN and A35KT to be active until March 14th. From Tonga, they go onto Western Samoa as 5W0SZ and 5W0VV from March 14-23rd. Activity will end in Fiji with a possibility of a Rotuma operation (if transportation can be arranged).

PACIFIC/ASIA DXPEDITION CONTINUES. Michael, DF8AN, continues on his long leg of DXpeditions. He will be in three different countries this week. Michael currently is in DU land signing DU1/DF8AN until March 11th. He will then spend a few days in Guam (March 11-14th) as KH1/DF8AN. Michael will then travel to Micronesia (V6) and be there from March 14-22th. His last stop will be to activate Koror Island (T8, Belau) between March 22-28th. Currently, no callsigns have been assigned for his V6 and T8 operations. His activity and operations should be mainly CW on all bands (including the WARC bands). QSL via bureau or direct (to his new address): Michael Noertmann, Neustadt 18, D-37154 Northeim, Germany.

QSL INFO AND NEWS.....
Hrane, YT1AD, and Dragan, Z32AU, were active from El Salvador during the ARRL SSB contest using the callsigns: HU1X - Hrane from San Salvador; HU4X - Dragan from beach house. QSL HU1X via YT1AD and HU4X via Z32AU.

Gianni, IT9PKO, was active as II9ZZ during last weekend's contest as a Single Op/Multi Band entry. QSL via IT9PKO: Mario Bartuccio, IT9JPK, P.O. BOX 7, 94100 Enna Centro, ITALY

QSL MANAGER W3HNK. Well known QSL Manager Joe Arcure, W3HNK, is reported to be in the hospital recovering from a heart by-pass operation. Many have received QSL cards from Joe, and we are sure that he would appreciate any get well cards/comments from the ham community. The

address is: Joe Arcure, W3HNK, PO Box 73, Edgemont, PA 19028

ON-LINE DXPEDITION LOG SEARCH WEB SITE AVAILABLE:
http://www.geocities.com/SouthBeach/Palms/8651/

5R8EE/FR5EL QSLS. There are certain rules to follow for QSLing 5R8EE and FR5EL. Michel, FR5EL, asks you to ONLY QSL direct and send NO bureau cards (Bureau Cards will not be answered). He also asks you to send your QSLs ONLY to FR5EL home call on Reunion Island and NOT to the address in Madagascar (because there is a lot of stealing of envelopes.....). Expect to receive your cards 3 to 6 months later. An indivdual reportedly comes over to Madagascar EVERY 3 MONTHS (from Reunion Island), and delivers Michel's QSLs from his P.O. Box on Reunion. Michel (5R8EE/FR5EL) then answers them at Madagascar, but it is unsure where he sends them from, so please be patient. Remember QSLs only go to: Michel Hoarau, P.O.Box 87, F-97832 Tampon, Reunion Island, France.

VP5, TURKS & CAICOS ISLANDS. Don, KN4UG, will be active in the coming weeks (March 16-24th) from Providenciales. His callsign has not been reported yet. QSL via homecall.

YB AMATEURS OFF THE AIR! Dennis, K7BV, received a message from an Indonesian friend stating that Indonesian amateurs are under a "radio silence" order covering the period of February 23rd through March 14th. Reportedly, this is taking place during the Indonesian Parlement board meeting in Jakarta, apparently for their president's 5th year in office.

ZL9, CAMPBELL ISLAND (Update for the January, 1999 DXpedition). The Kermadec DX Association, which had a very successful DXpedition to Raoul Island, Kermadecs under the callsign ZL8RI, is pleased to announce that plans are now at an advanced stage for the January, 1999 DXpedition to Campbell Island ZL9. The neccessary permissions have been obtained, transport arranged and the logistics needed to put together an operation from this remote island are well in hand. An international team of operators has been selected from New Zealand, Japan, Canada, The United States and Ireland. The operation should begin activity on January 9th, 1999, and remain on the air until January 25th. The team will operate on SSB/CW/RTTY and on all bands. The team leader Ken Holdum, ZL2HU, has previously written to major DX clubs worldwide seeking their financial support for this DXpedition which is costing in the region of $65,000 (U.S.) to mount. If you would like to contribute to the success of the ZL9 DXpedition by helping to meet the enormous costs, send donations:
Ken Holdum ZL2HU (Team Leader) Declan Craig EI6FR (Team Member)
The Kermadec DX Association The Kermadec DX Association (Europe)
P O Box 56099 167 St. James's Road
Tawa, Wellington - or - Greenhills, Dublin 12
New Zealand Ireland

All donations will be acknowledged on receipt, and in the event of the DXpedition not proceeding, will be returned.

ZS26, BIRD ISLAND (South Africa). Several bulletins report that a new IOTA will be activated this week. Activity will be from March 9-13th. Operators ZS1B, ZS1FJ, ZS1KC and ZS1LL will sign ZS26BI on all bands both CW/SSB. Watch the IOTA frequencies. QSL via ZS1FJ.

1998 INTERNATIONAL DX CONVENTION. Between May 1-3rd the convention will be held at the Holiday Inn, Visalia, CA, [telephone: (209) 268-1000]. Further information can be obtained from Rick, W6SR, co-chairperson at 714-993-0713 (home), 310-616-3912 (work) or via the E-mail address at: scdxc@primenet.com.

Robert -- I think the answer to your question can be found at URL:
http://users.lanminds.com/~anb/ham/ukrecip.html
Here's a snip (but best u visit the page ur self)
"The form you will need to fill out in order for a licensed US amateur
to get a
reciprocal license is called RA 189 Application for a Temporary Licence
for
non-UK Residents (Rev. 4, May 1994). At some point in the future, this
form
will be available off the web, but the best way to get it is to either
fax or e-mail (library.ra@gtnet.gov.uk)
the RA (Tel. 011+44 171/211-0211, Fax 011+44 171/928-4309) or the RSGB
with a written request to have the RA 189 form faxed or mailed back to
you." End quote

Enjoy the trip

From: "Craig B. Johnson" <craig.johnson@unisys.com>
Message-ID: <6e1kpk$r$1@ernie.rsvl.unisys.com>
Source record: 29877

Hi. I am very curious.

Do Hawaiian hams have special privileges granted to them during WW contests?

In particular, I observed many Hawaiian stations using the DX "trick" of transmitting in the US 40 meter CW region (e.g. around 7050), and listening for US hams in the 7200 region.
I realize Hawaii is considered DX for DXCC and in these contests, but they are still licensed by the FCC. I am curious about how they are legally allowed to transmit SSB in the portion of the amateur band in which US hams are restricted.

I am not against this practice, but just curious.

The operation you heard was probably in the 7.075-7.100 section of
special phone privileges granted to Hawaii, Alaska and several US Carribean
& Pacific territories.

No, they have special priviledges granted to them all the time...

Hawaii is in a different region than North America, thus operating segments on the HF bands are different. Hawaii is lucky - on 40 meters, they can go below 7.100 on SSB, but still operate in the regular U.S. phone band. In Guam we are in region 3 and can only operate below 7.100 - and we are licensed by the FCC also....

767. A35 by OKDXF canceled

Newsgroup: rec.radio.amateur.dx
Date: 1998-03-09 00:00:00 UTC
From: "Gil Gautier (F5NOD)" <f5nod@easynet.fr>
Message-ID: <6e4bip$85j$1@buggy.news.easynet.net>
Source record: 29883
Cross-posted to: fr.rec.radio,rec.radio.amateur.dx

THIS IS THE response at my question "did A35 expedition by OKDXF are canceled ??"
F5NOD GIL

Dear GIL, yes DX pedition members of OKDXF to Tonga was canceled, because operators didn't get visa. They changed their plans and they are active from W.Samoa as 5W0VV and 5W0SZ and their operation will be till 24.3.1998. During this stay they will try operate couple of days from KH8. Their next stop will be Fiji - 3D2 from 24.3.-1.4. and other two operators will go to 3D2 - OK1CF and OK1DWC, but their operations from Rotuma Island was also canceled, because there is not plane to Rotuma after 24.3.98 (last plane from Fiji to Rotuma will be on 23.3. and there is not place for them). They have air ticket from 3D2 to KH6 and then to Europe on 1.4.1998.
Be so kind please and give this info to other DX Bulletins. Thanks a lot!
73! Steve, OM3JW

I am new to the world of ham radio, just got my tech license 3 weeks ago, and was wondering if anyone could provide me with some information about the mfj-9406 six meter radio. Is this a good radio for the price? ($249) How does it perform? Is there any known problems with it? I am very inexperienced, is this a good radio for a beginner on six? I have also thought about the tentec 2m to 6m transverter. Would this be a better option? I have only an fm 2m rig, so I would only be able to use 6 fm. Does this tranverter allow repeater operation? with correct offsets and sub audible tones? What about an antenna? My neighborhood doesn't allow radio towers, but I could put a small pole in the air, like those used for tv antennas. What would be best in this situation? a 6m loop? A small light weight beam on a tv rotator like the mfj-1762 6m beam? A dipole? Thank you in advance for any information.

I've used a Heil boomset with an HM5 element for a few years now and
my ic751a has no problems with it; I run the mike gain a notch or two
higher than I would for the stock microphone, but that's not a big
deal.

Hi
Craig,

Phone and image operation is allowed on 7075-7100 kHz by US stations opertaing
in ITU Regions 1 and 3 and by US stations in Puerto Rico, US Virgin Islands and
areas of the Caribbean south of 20 degrees north latitude; and in Hawaii and
other areas near ITU Region 3, including Alaska.

In the short time I had to look it up I'll be danged if I could find that in
Part 97. I did happen to find it in the ARRL's section [explanation of Part
97] of "The FCC Rule Book."

EUROPEAN MOST WANTED COUNTRIES SURVEY

BY LYON DX GANG !

Here is the 1998 MOST WANTED COUNTRIES survey for EUROPE
.....
* DEADLINE * MARCH 20th *

The purpose of this survey is to let the HAM world know which countries are
the most wanted for EUROPE ! That can give ideas of DX EXPEDITION.

I need a list of your needed countries, (E.W.W.A. or DXCC)

* IF YOU ARE IN THE LOG OF K7K - ZK1XXP - FT5ZG *
** PLEASE DO NOT INCLUDE THEM IN YOUR LIST ** *

You can send it to me via :

- Packet : F5PYI@F6BIG.FRHA.FRA.EU

- Mail : LAURENT BORDE
L'Orme
42520 MACLAS
FRANCE

- CLUSTER : SP F5PYI > F6KDF-3

- EMAIL : f5pyi@sugarland.ampr.org

You must send me this list before March 20th 1998.

The MODE is not including in the survey !

The results will be published on PACKET - INTERNET - and a few dx magazines
during the month of MAY 1998 or later.

We will first give the results at the LYON DX GANG CONVENTION ON APRIL.

Please try to gather your lists with some of your friends around you.

PLEASE ADVERTISE THIS MESSAGE ON INTERNET and to all your local dx friends
EVEN IF THEY STILL NEED 200 countries to complete their DXCC...!!!

MORE REPLY I WILL HAVE, MORE REPRENSATATIVE THE SURVEY WILL BE.

***** HAPPY NEW YEAR 1998 TO YOU AND ALL YOUR FAMILY *****

Best 73's de LARRY---------F5PYI......one of the LYON DX GANG !

779. VP3 Prefix during contest

Newsgroup: rec.radio.amateur.dx
Date: 1998-03-10 00:00:00 UTC
From: Dennis Jacobson <n6ng@sj.bigger.net>
Message-ID: <35056708.82@sj.bigger.net>
Source record: 29895

Anyone else work this one? Is it the same as the VP5 prefix or
something new? I can't find any reference on the Internet to a
new VP3 prefix. Thanks

780. Lighthouse/Lightship operation event

Newsgroup: rec.radio.amateur.dx
Date: 1998-03-10 00:00:00 UTC
From: K0HB@usa.net
Message-ID: <6e41it$t0b$1@nnrp1.dejanews.com>
Source record: 29896
Cross-posted to: rec.radio.amateur.misc,rec.radio.amateur.dx

There is going to be a Lighthouse/Lightship Activity Weekend in 1998 from 0001 UTC on Saturday 22 August until 2359 UTC on Sunday 23 August 1998.

Some details of the event, the event is NOT a contest, each station decides how they will operate their station regards modes and bands. There is no restrictions on aerials or power. Hours of operations are at the discretion of each station within the time frame of the event. We wish operators to enjoy themselves and have fun whilst making contact with as many stations as possible, these stations do not have to be another lighthouse or lightship. Some operators say fun - 10,000 contacts - OK, but we request that stations take some time to work the slow operator, the newly licensed and QRP stations.

This event is used to obtain maximum exposure for our hobby. We invite the press and, QTH permitting, also the public and try to underline the obvious parallel between the international aspect in lighthouses, lightships and amateur radio.

We use the event segment of the 5 'Classic' bands with a centre frequency if conditions are bad, at least we have one place we can (try to) meet. We request that the centre frequency is not used for pileups.

CW
80m 3.510 - 3.540 Khz Centre 3.521 +/-
40m 7.005 - 7.035 7.021 +/-
20m 14.010 - 14.040 14.021 +/-
15m 21.010 - 21.040 21.021 +/-
10m 28.010 - 28.040 28.021 +/-

PHONE
80m 3.650 - 3.750 Khz Centre 3.721 +/-
40m 7.040 - 7.100 7.051 +/-
20m 14.125 - 14.275 14.221 +/-
15m 21.150 - 21.250 21.221 +/-
10m 28.300 - 28.400 28.351 +/-

To assist other stations we request that participating stations add 'LIGHT' , 'LGT' , 'LIGHTHOUSE' or 'LIGHTSHIP' after their call.

I have listed the countries that have indictated they will be joining in the fun of the weekend and some of the stations.

ARGENTINA
LU9VET and group are looking for a lighthouse in Argentina, possibly Punta Delgada 42.46S 062.40W.

AUSTRALIA
VK2BA hope to be QRV from the Queensland Maritime Museum which has a lighthouse and lightship.
Australian Naval ARS are currently canvassing their members.

BELGIUM
ON4BRN Lightship Westhinder which is at Zeebrugge.

CANADA
VA3TJP will be at an unmanned maritime beacon at Lac des Chats, Ottawa.
VE3CGJ HMCS Haida at tyhe Naval Museum in Toronto will be QRGV to work lighthouses and lightships.

DENMARK
OZ7DAL Lightship Fyrskib XXI at Edeltoft.
OZ1VYL Lightship Motorfyrskib 1 at Esbjerg.
OZ9DSB Lighthouse at Sprogo Fyr, in the middle of Store Belt, special permission.
OZ5DSB Lighthouse at Fornaes Fyr, at the tip of the nose of Jutland.

ENGLAND
GB2HL Haisborough Lighthouse.
GB2SBL St. Bees Head Lighthouse.
GB2PL Pendeen Lighthouse.
G0VOP/P Portland Bill Lighthouse.
Hull & DARC will activate the lightship that was at Spurn Head and is now in dock in Hull.
Scarborough Special Event Group are awaiting their AGM before deciding on a site.
South Tyneside RC will likely activate Whitburn Lighthouse.
G7UVY and group will be at Lowestoft Lighthouse.
Silverthorn RC are trying to get permission to operate from the lightship in St. Katherine's Yacht Haven, London.
GB2SFL South Foreland Lighthouse. Approval is being sought from the local owners.

FAROE ISLAND
OY6FRA It is hoped that the lighthouse at Torshavn will be QRV during the weekend.

FINLAND
OH1AH Top Hat Club are seeking permission to operate from Uto.
OH8AA Viitosten Kerho ry hope to be QRV from the old lightship Rellu in Kotka.
OH8TA Oulun Teekkarien Radiokerho ry will be at the lighthouse on Hailuoto Island.

FRANCE
F6KUM Dieppe RC will be at the lighthouse Ailly which is 15 KM from Dieppe.

GIBRALTAR
ZB2LGT Lighthouse at Gibraltar.

GREECE
Different clubs in Athens are looking for lighthouses to activate. I expect

at least one.

ICELAND
There is the possibility of activity from Iceland.

ISLE OF MAN
GT3FLH Point of Ayre Lighthouse.

ITALY
IK0IXI Fabio is looking for a suitable site.
IK0JMS His local club is looking for a site.

NETHERLANDS
PA6LH? Lighthouse on the Island of Egmond aan Zee.

NEW ZEALAND
ZL1AB NZART Branch 29 & 80 are planning a trip to Tiritiri Matangi Island.
ZL1FNB Cape Regina Lighthouse.
ZL2AFV Looking and will advise.
ZL4AA Obtaining permission to operate from Taiaroa Heads Lighthouse.

PORTUGAL
It is hoped to have activity from Portugal.

PUERTO RICO
KP4ES Lighthouse in Puerto Rico and they are trying to get more clubs QRV.

SCOTLAND
GB2LBN Barns Ness Lighthouse.
GB2LKH Scottish Lighthouse Museum at Kinnard Head.
It is hoped to have a total of ten stations active from lighthouses in Scotland.

SOUTH AFRICA
ZS1YT Lighthouse at Cape Agulhas, souththermost most tip of Africa.
ZS1MP Lighthouse at Cape Point.
ZS1RON Slangkop Lighthouse.
ZS1ACH It is hope to have a station on Robben Island, where Nelson Mandela was imprisoned.
ZS1B Green Point Lighthouse.

SPAIN
It is hoped to have activity from Spain.

SWEDEN
It is anticipated that the following stations that were QRV in 1997 will be active in 1998 and coordinated by the SSA.
SK7DD Lighthouse Kullen, one of the oldest in Sweden.
SK6FL Lightship Fladen at Goteborg.
SK7FK Lighthouse at Utklippans.
7S0SFJ Lightship Finnngrundet in Stockholm.

SVALBARD ISLAND
JW6RHA Unni advises that there is an international YL meeting on Svalbard

Island during the weekend and she hopes to have stations QRV from different locations.

TURKEY
TA7KA Trabzon, Turkey. Notification of site nearer the time.

U.S.A.
K2AA Lightship LV79 in New Jersey.
W7BU Lightship Columbia at Astoria, Oregon.
NA2V Staten Island Lighthouse.
KL7AA Anchorage ARC are looking for a lighthouse or similar.
KC8ELY Great Lakes AR Rovers are getting organised and will advise site.
K1USN USS Salem will be QRV to work lighthouses and lightships.
NJ6VT USS Pampanito will also be QRV to work lighthouses and lightships.

WALES

GB2MHL Lightship at Milford Haven.

SM, LA, DL, PA, CT and EA are looked after by other amateur coordinators on the continent of Europe and have yet to notify me of callsigns.

So if you fancy establishing a station at a lighthouse, lightship or maritime light come and join us in the fun of the weekend. If you do intend to join us could you let me know and also the QTH and QSL information.

Vy 73 from Scotland

I've had no experience with the MFJ-9406 but understand that it is a pretty good radio considering the price. I have had experience with the Ten-Tec 2m-6m transverter and can say that is is VERY good. I built the kit version that cost $95 and would say that the assembled version at $165 has to be a bargain. Advantages: operates any mode that your 2 meter radio operates. Disadvantages: operates any mode that your 2 meter radio operates - if your 2m is fm only then you get fm only out of the transverter, and for 6m you really want sideband capabilities. I am using my transverter with an all mode Yaesu 2 meter (FT-290RII) and it works like a champ. If you should buy the transverter you MUST keep one thing in mind: KEEP THE INPUT POWER TO THE TRANSVERTER AT 5 WATTS OR LESS, otherwise you can damage the transverter.

Overall, I am very satisfied with the Ten-Tec transverter and would recommend it to someone that wanted to get a taste of 6 meters but had only 2 meter equipment and needed to spend as little money as possible to get on 6.

I am new to the world of ham radio, just got my tech license 3 weeks ago, and was wondering if anyone could provide me with some information about the mfj-9406 six meter radio. Is this a good radio for the price? ($249) How does it perform? Is there any known problems with it? I am very inexperienced, is this a good radio for a beginner on six? I have also thought about the tentec 2m to 6m transverter. Would this be a better option? I have only an fm 2m rig, so I would only be able to use 6 fm. Does this tranverter allow repeater operation? with correct offsets and sub audible tones? What about an antenna? My neighborhood doesn't allow radio towers, but I could put a small pole in the air, like those used for tv antennas. What would be best in this situation? a 6m loop? A small light weight beam on a tv rotator like the mfj-1762 6m beam? A dipole? Thank you in advance for any information.

I failed to address your other points.

(1) use of the transverter with repeaters is no problem. Set your offsets on 2 meters to the 6 meter offset rather than the common 600k 2 meter offset. Pl tones go through just like on 2 meters. If your 6 meter repeater needs a 110.9 tone, just set your 2 meter rig for a 110.9 tone or whatever is required.
(2) antennas - I have a AEA 6 meter loop that I use and it works good, but it is horizontally polarized, and thus works best for sideband (sideband antennas normally are horizontal, fm are vertically polarized). Don't know about MFJ antenna but would have no reason to think that it would not be a good antenna, but again, if you are on fm you should mount it vertical, ssb go horizontal. Also, if you are fm only you might try a 6 meter J-pole that you can buy commercially or make one yourself.

783. March Propagation Forecast

Newsgroup: rec.radio.amateur.dx
Date: 1998-03-10 00:00:00 UTC
From: ids@nol.net
Message-ID: <3505bda8.15965559@news.nol.net>
Source record: 29899

PROPAGATION - by AD5Q HOUSTON, TEXAS -- MARCH 1998

The equinox approaches, and all DX bands will be in transition toward their summer conditions for the next few months. 20 has not yet opened for reliable nightpath work, but northern latitude paths are opening for greyline and daypath propagation. Polar paths are workable, though the windows are still narrow. In recent weeks, Europe has needed these polar openings to make certain rare Pacific contacts. Many Pacific countries rank high on European need lists, just as the Asian ones do in North America. Rare contacts across polar paths are much easier when expeditions make daily appearances on 20 while the polar windows are open. Over the next two months, conditions over the pole will improve dramatically on 20 Meters.

15 is another story. The flux is not high enough yet to open the really high latitude paths. The northeast and northwest paths are wide open, however, and have been the main source of activity in recent contests. Most of Europe is workable from here in Texas, but little is heard from Russia. In the western US, northern and eastern Europe are difficult because these paths are more polar. There are times at the peak of the sunspot cycle when polar paths are open for most of the day and night on 15. For now, we enjoy the novelty of a solar flux in the 90's and good running rates for Japan and Europe.

The spring season on 10 Meters is disappointing many. Openings to Europe and Japan have been brief and marginal. Even the east coast is reporting low numbers on this band in major contests. I do not have a scientific explanation why autumn conditions on 10 seem to surpass those in spring. (All my forecasts are more intuitive than scientific.) Anyhow, the solar flux will continue to rise and we will not see the benefits of this on 10 Meters until September. Openings to the east, west and south are good. From the US, we can access Africa, the Pacific and South America.

Since night paths are not yet open on 20, we continue to look to the low bands in the evening. 40 is in great shape because with fluxes in the 90's the high latitude night paths are open. Good signals from Europe begin in late afternoon and continue past midnight, and we can follow the sunrise peak from Russia across to Ireland. The Asian coverage at our own sunrise peak is awesome. These openings should be exploited as we await the return of nightpath openings on 20.

Aloha Craig,
Yup, we do have special privileges! Let me quote: "Phone operation is
allowed on 7075-7100 kHz in Puerto Rico, US Virgin Islands and areas
of the Caribbean south of 20 degrees north latitude, and in Hawaii
and areas near ITU Region 3, including Alaska." ('91 Hdbk)

That last portion, "...areas near ITU Region 3" is a bit vague, though.
How near is near?

Both Alaska and Hawaii have this privilege. For radio purposes, they
are in a different region from us mainlanders. The details are in the
FCC rules, Part 97. Doesn't seem fair though, does it?

Brian,
For the money, it is not a bad deal. I used that rig to start out in 6M; with only a wire dipole mounted below the peaks of the house it allowed for QSO's from southern California to Colorado and Texas, New Mexico and even an Alabama station. The radio does tend to drift a bit, and it has no RIT - though it has 'fine tuning' instead. A very basic radio you basically just plug it in and turn the dial, the receive is quite good; have compared it side-by-side with a Kenwood TS-60s and the MFJ could hear everything the Kenwood could (but the Kenwood was easier to tune, did not drift and you have a few 'gizmos' to help pull a signal out if need be). It is SSB ONLY; no FM and it only covers the 50.0 - 50.3 CW and SSB sub-band (well, a portion of it anyway) so unless you have a lot of locals on 6M SSB (Texas seems to have a lot of 6M operators) there may be a lot of time between QSO's, but when the band is good you will find it fairly easy to cover most states from your location. All in all not a bad way to get on 6M ssb; look around at some swap meets for a used one or check out one of the swap groups.

Hope this helps,

73,
Howard

Bear in mind that all QRZ can do is list the currently-unassigned 1x2 and 2x1 callsigns. A callsign must have been unassigned for two years or more before it is available for routine vanity assignment and QRZ has no way of knowing how long they have been unassigned.

You got the call correct, Gareth.

When it looked like the last G numbers were going to run out, the UK
scheduled to change all new calls to the M series, and those were
issued from April 1987 I believe. GM is the older Scottish call and
a new one will be MM. G and M are for England, etc. If you like
prefixes, look on CW for 2E novices from England (2M from Scotland
etc.)

808. H40 -- New DXCC counter?

Newsgroup: rec.radio.amateur.dx
Date: 1998-03-13 00:00:00 UTC
From: K0HB@usa.net
Message-ID: <6ebnk8$u7$1@nnrp1.dejanews.com>
Source record: 29726
Cross-posted to: rec.radio.amateur.dx,rec.radio.amateur.misc

Tim Totten posted the following on the DX reflector.

The Temotu Islands--A New DXCC Country!

The South China Sea DX Team (SCSDXT) has extensively studied the new DXCC criteria which will become effective on 31 March, 1998. This research has led to the discovery of several potential new DXCC entities.

The task ahead is now clear--to further research these potential new ones, to file the applications for inclusion on the Holy List, and most importantly to activate these new entities. It is left as an exercise for the keen student of DX to independently "re-discover" these new DXCC counters. With this in mind, however, the first target entity has been selected and its activation is hereby announced.

The Temotu Islands, located in the South Pacific, collectively form the easternmost province of the Solomon Islands, an independent country since 1978. Because Temotu is separated by more than 350 km from the rest of the Solomon Islands, it should easily qualify as a new DXCC entity. The SCSDXT has teamed with the Solomon Islands' IARU member organization, SIRS (Solomon Islands Radio Society), in organizing a full-scale DXpedition to Temotu, as well as preparing the application for new DXCC status.

The team for this operation includes members from four continents:

H44GP, H44GR, JA5DQH, N4GN, N7NG, OH0XX, OH1RY,
OH2BC, OH2BE, OH2BH, OH2TA, W6OSP and 9V1YC

In recognition of its new status, the Solomon telecommunications authorities have agreed to assign the previously unused H40 prefix to Temotu for all future amateur operations. This first Temotu DXpedition has been issued the special call sign H40AA.

Visiting team members will begin arriving on 21 March and may be found on the air using their individual H44 call signs while making final preparations for the main event. These early operations--including all-band activity in the CQ WPX SSB Contest, 27-28 March--will count for DXCC credit as the Solomon Islands, under the current rules. The IOTA number is OC-100.

At 2359Z on 31 March, the H40AA call sign will be debuted on the air, at which point QSOs will count for Temotu DXCC credit, presuming the application for new DXCC status is eventually approved. The H40AA operation will continue for approximately two weeks.

H40AA operating frequencies:

CW: 1824, 3504, 7004, 10104, 14024, 18074, 21024,
24894, 28024 and 50104 kHz
SSB: 1824, 3775, 7045, 14195, 18135, 21295, 24945,
28495 and 50104 kHz
RTTY: 14083 and 21083 kHz

Two small aircraft have been chartered to transport the operators and equipment from Guadalcanal to the Temotu Islands. Although very remote, Temotu has a rich and colorful history, dating back to the 15th century B.C.

There will be no Internet log search capability DURING the operation. DXers are encouraged to make every effort to confirm their QSOs "the old fashioned way"--by listening carefully! It is understood, of course, that there can still be cause for uncertainty at times, despite the best efforts on both ends of the pileup. Internet log search capability will likely be made available a few weeks AFTER the operation.

The H40AA team will employ Yaesu FT-1000MP and FT-900AT transceivers, as well as Alpha and FinnFet amplifiers. A variety of beam and vertical antennas will be used, inlcuding several new FinnFet models.

QSLs for H44 "warm up" QSOs (for Solomon Islands DXCC credit) will be via the home call of the individual operators. The H40AA Temotu QSLs will be handled by OH2BN:

Jarmo J. Jaakola, OH2BN
Kiilletie 5C30
Helsinki 00710
FINLAND

SIRS has kindly requested that DXers NOT send any cards for these operations via the H4 QSL bureau. OH2BN will reply to H40AA requests via the OH bureau after the initial batch of direct requests are serviced.

The team would like to especially recognize the valuable support of Yaesu Musen Co. Ltd., Mikrolog Ltd., FinnFet Ltd., the Northern California DX Foundation and INDEXA.

Further details will be announced in the coming days.

Hello all,

I have started a 50.400 AM net on Friday nights at 19:30 PDT.
It is run from Saugus Ca DM04rk by KC6WFS Dave Booth.

I'll be using a Gonset G-50 to a ARX-6.

If you live in the local area please join in on the net.

Thanks,

Dave Booth KC6WFS DM04rk

Hi Jan-Martin

The normal way to subscribe to a mailing list is to send a mail to the administrator, with the text: subscribe <mailing list name>

So to subscribe to VHF-DX-discuss you send ther mail to:
majordomo@blacksheep.org

with the text:
subscribe VHF-DX-discuss

>
> any idea about what to do to subscribe?

In general you mail to the admintration address with the message:

subscribe mailistname emailaddress

So for the first one you listed, mail to majordomo@blacksheep.org
with the following one line in the message:

subscribe vhf-dx-discuss LA8AK@OnLine.no

They're not configured all the same and some care about the subject
line but most don't.

And in general, mailing to that administration address the message:

help

will return information on addressing that mail server and the list
of other commands to get the index of lists and site rules. Majordomo
is just a piece of software for mail list reflecttion, not a person,
so don't be shy about what you send there or how often.

Regards,

Subscribing to the VE7TCP DX Reflector

1) send a message to dx-request

TO : dx-request@ve7tcp.ampr.org
SUB:
TEXT: subscribe dx <address>

you can omit the address if the request is sent from the computer
beingsubscribed

2) You will receive a message that someone has attempted to access
subscription or
deletion problems on your behalf.

3) You will then receive a message containing an authorization number.
Copy this
number ONLY and place it back into a reply.

This reply should be going back to listserv@ve7tcp.ampr.org

4) A reply confirmation and FAQ's should come quickly.

With the new equipment recently purchased to upgrade the VE7TCP site
subscription requests, authorization, and confirmation have been
completed in as quickly as 5 minutes time. I visited a local ham having
trouble and redid his entire subscription.

SB DX @ WW $OPDX.348
Ohio/Penn DX Bulletin No. 348

The Ohio/Penn Dx PacketCluster
DX Bulletin No. 348
BID: $OPDX.348
March 16, 1998
Editor Tedd Mirgliotta, KB8NW
Provided by BARF-80 BBS Cleveland, Ohio
Online at 440-237-8208 28.8k-1200 Baud 8/N/1 (New Area Code!)

Thanks to the Northern Ohio Amateur Radio Society, Northern Ohio DX Association, Ohio/Penn PacketCluster Network, WA2MOE, WB2RAJ/WB2YQH & The 59(9) DXReport, W3UR & The Daily DX, N4GN, K4VUD, W5AJ, K7BV, KH7U, KL7JR, N0AH, Guam Contest Club, DL3JSW, F6AJA & LNDX, G4BUE & DX News Sheet, IK1WVQ, LA7EHA, OM3JW, UN7FZ and VE3NQK following DX information.

3A, MONACO. Tony, IK1QBT and Mauro, IK1CJO, will be active again from the Principality of Monaco in April. They will sign 3A/IK1QBT only on CW and 3A/IK1CJO only on RTTY. No word about SSB was mentioned. QSL via the bureau or direct to homecall. Meanwhile, look for Luc, I1YRL, and John, IK1SLP, to be active March 28-29th, as 3A/I1YRL and 3A/IK1SLP. Activity will be on CW/SSB all bands including the WARC bands. QSL via I1YRL.

3W, VIETNAM. Coly, 3W5FM, was heard begging (yes begging) on 20 meters CW. Check around 14007 kHz beginning 1330z. Also check around 2300-0000z. Also, he can be heard daily on 160 meters (1826 kHz) around his sunrise. QSL via UA0FM, P.O. Box 66, Vladimir City 630011, Russia.

9N, NEPAL (160 meters activity coming!). Charlie, K4VUD (recently active as 9N1UD), reports visiting native Nepal ham Satish, 9N1AA, who is nearly done with his newly built home in Kathmandu. Once completed, he will have the capacity to be active on all bands and all modes by the end of the summer (July/August). His station will consist of a Force 12 tribander donated by the Northern Califorina DX group and other donated rigs, coax and fittings. He has permission to go over his neighbor's property with a 160m wire antenna.

9U, BURUNDI. The "DX News Sheet" reports that Andy, 9X0A, is active every Tuesday until the beginning of April as 9U5/9X0A on 20m SSB QRP. Check 14195 and 14292 kHz. QSL via home call RW3AH.

AH2, GUAM. Members of Guam Contest Club report that they will be active in the upcoming 1998 CQ WPX Contest to become the Oceanic leader as a

Multi-Single entry. Operators JG3RPL/N1BJ, JI3ERV/NH2C, JK3GAD/AL7NC and JH7QXJ will use the call sign AH2R. Guam Island is in Zone 27 and has an IOTA of OC-26. The GCC state their Sunset/Sunrise is 0832/2019z. QSL via JI3ERV. Any questions or comments are welcomed and can be sent to GCC's E-mail address: gcc@seo.amagasaki.hyogo.jp

C9, MOZAMBIQUE. "The 59(9) DXReport" has reported that Franco, I4LCK, who recently signed C91LCK, made 10,895 QSOs in 13 days of activity. He was unable to activate Chiloane Island (AF-???). QSL via I4LCK.

CHANGE OF PLANS BY THE OKDX GROUP. The members of OKDX who were supposed to be active this past week from Tonga (A35) had to cancelled because the operators didn't get a visa. Instead, the group changed their plans and they became active from Western Samoa as 5W0VV and 5W0SZ. They will be active from 5W land until March 23rd. It is reported that during their stay, they will try to operate a couple of days from American Samoa (KH8). Their next stop will be Fiji (3D2) from March 24th to April 1st. There is more bad news! The OKDX group has reportedly cancelled their operations from Rotuma Island because a plane is not available for them to fly to Rotuma.

CT3, MADEIRA ISLANDS. Bert, PA3GIO, states he will be active March 26th to April 2nd, from IOTA AF-014 as CT3/PA3GIO/M. Check around the usual IOTA or DX frequenices on 20, 17, 15, 12, 10 meters. QSL via the bureau or callbook address. Bert states that there is a small chance of some 40/80 meters and 6 meters activity.

EI, IRELAND. EA3BOX announces he will be active March 25th through April 1st as EJ/EA3BOX. He will also be an entry in the CQ WPX SSB Contest.

FM, MARTINIQUE. Bruno, F5JYD, will be signing FM5JY beginning March 25th for 4 months. He will be active from 160-10 meters and especially on 12 and 17 meters. QSL via his home call.

H40, TEMOTU ISLANDS (A New DXCC Country!). In a press release by Tim Totten, N4GN, the South China Sea DX Team (SCSDXT) announces that they have extensively studied the new DXCC criteria which will become effective on March 31, 1998, and have found/researched/discovered several potential new DXCC entities. The Temotu Islands, located in the South Pacific, collectively form the easternmost province of the Solomon Islands, an independent country since 1978. Because Temotu is separated by more than 350 km from the rest of the Solomon Islands, it should easily qualify as a new DXCC entity. The SCSDXT has teamed with the Solomon Islands' IARU member organization, SIRS (Solomon Islands Radio Society), in organizing a full-scale DXpedition to Temotu, as well as preparing the application for new DXCC status. The team for this operation includes members from four continents: H44GP, H44GR, JA5DQH, N4GN, N7NG, OH0XX, OH1RY, OH2BC, OH2BE, OH2BH, OH2TA, W6OSP and 9V1YC. In recognition of its new status, the Solomon telecommunications authorities have agreed to assign the previously unused H40 prefix to Temotu for all future amateur operations. This first Temotu DXpedition has been issued the special call sign H40AA. The team will begin arriving

on March 21st and may be found on the air using their individual H44 call signs while making final preparations for the main event. These early operations--including all-band activity in the CQ WPX SSB Contest, will count for DXCC credit as the Solomon Islands under the current rules. At 2359Z on March 31st, the H40AA call sign will be debuted on the air, at which point QSOs will count for Temotu DXCC credit, presuming the application for new DXCC status is eventually approved. The H40AA operation will continue for approximately two weeks. Suggested H40AA operating frequencies will be:

CW: 1824, 3504, 7004, 10104, 14024, 18074, 21024,
24894, 28024 and 50104 kHz
SSB: 1824, 3775, 7045, 14195, 18135, 21295, 24945,
28495 and 50104 kHz
RTTY: 14083 and 21083 kHz

QSLs for H44 "warm up" QSOs (for Solomon Islands DXCC credit) will be via the home call of the individual operators. The H40AA Temotu QSLs will be handled by OH2BN: Jarmo J. Jaakola, Kiilletie 5C30, Helsinki 00710, FINLAND. SIRS has kindly requested that DXers NOT send any cards for these operations via the H4 QSL bureau. OH2BN will reply to H40AA requests via the OH bureau after the initial batch of direct requests are serviced. Further details will be announced in the coming days. ADDED NOTE: All OPDX InterNet Subscribers will receive the complete unedited press release as an additional bulletin.

JW, SVALBARD. Raymond, LA7EHA, and Trond, LA8NHA, will be active from Longyearbyen as JW7EHA and JW8NHA, March 23-25th. Activity will be on 80-10 meters. QSL to home calls.

KH3, JOHNSTON ISLAND. By the time you read this, a very short operation may be on its way. There is a possibility that part of the KH1 team, Chuck Brady, N4BQW; "Mac" McIntyre, WA4FFW; Pat Guerin, NH6UY; Harold Manasco, K4AU; and Joe Young, N4DAZ, will be able to activate the club station at Johnston Island. Activity will depend on whatever time they have between arrival on Johnston and when their plane leaves. It is suggested to look for them on 20/15 meters (possibly other bands) and also check for packet cluster spots. An accurate arrival time is not really known, but they are guessing the afteroon of March 15th or probably the 16th during the early morning. Their plane leaves around midnight (local time) that night.

KL7, ALASKA (USI and IOTA Islands). The U.S. Islands Awards Program club station KL7USI will be active from IOTA NA-041 islands (also several "new ones" for USI program) in Alaska, June 6-13th. Check 14260 kHz for phone activity. Also, look for maritime mobile and RTTY operations. QSL direct or e-QSL at: http://www.eng.mu.edu/~usi

OH0, ALAND ISLAND. A German group consisting of DK6QW, DL3QQ, DF8QJ, DG1YHV and DL6YFB will be active from March 23-31st. The group will activate two stations signing OH0/homecall/P. Activity will be on 160-10 meters. QSL via home calls via bureau.

P3, CYPRUS. The Russian Contest Team consisting of RA9JX, RA9JR, UA9MA, UA9YAB, RA0AM, RV0AR, UA3TT, RZ3TX, RZ9UA, UN7FZ, etc., will be on the air in CQ WPX at the end of March as P3A in Multi/Multi category. The team will be active before and after the contest. QSL via W3HNK.

PJ8, SABA ISLAND. Don, KF4KRZ, has been on Saba signing PJ8DM since February 24th, and will stay through late March. He has made some schedules with Western PA hams on 80 and 40 meters, but is currently suffering from a local QRN problem on those bands. He preference is 20 meters. QSL via home call.

QSL INFO AND NEWS.....
Dennis, K7BV, operated as KP3/K7BV for one day before the 1998 ARRL DX Phone Contest. He used the station and callsign of KP3P for the contest. Please send QSLs for both calls for this period of time ONLY to K7BV.

Ralf, DL3JSW, reports that it is very difficult to get a QSL from Zone 18/19. He has offered to help in retrieving QSLs from Vlad, UA0ACG (Zone 18), and Vlado, UA0LCZ (Zone 19). Ralf reports that both stations are very active, mostly on CW and the low bands. QSL cards can be sent to Ralf via the bureau or CBA. He will then forward them to the two operators in UA0 land. Also, if anybody sends direct with green stamps more than needed for postage, he welcomes the help to fray the costs.

QSLs for the recent 8P9P operation should go via WJ5DX.

T48RAC UPDATE. If anybody wishes to check to see if they are in the T48RAC's log, please check the following WEB site at:
http://www.kwarc.org
Click on DXpedition, and follow the instructions that will direct you to the contest logs. Please send QSL cards to VE3ESE, Don Fisher, at his CBA, with 1 IRC, or GREEN STAMP, with a SAE, or SASE in CANADIAN POSTAGE. All cards sent by bureau will be returned by the bureau.

QSL Manager Ron, AC7DX, reports many cards are arriving for Mark's (KA4IST) KA4IST/KH5 operation. He suggests the following guidelines to help him and you receive a QSL card. Also, he wants to remind everyone that the other KH5K, NH1 and WH1 operations go to other managers, not him. QSLing direct: Cards that are sent direct, but with no return funding or return envelope will be QSLed via the bureau. All direct cards received will be sent back direct if they included the following:
1. A self addressed envelope (SAE) that should be provided.
2. Applications from the USA should have at least a First class stamp affixed or include one IRC.
3. Applications from non-USA countries should include at least one U.S. green stamp or 1 IRC or a U.S. airmail stamp.
4. Only 1 callsign per envelope.
5. Please, NO Foreign currency.
QSL direct to: Ron Lago AC7DX, POB 25426, Eugene, Oregon 97402

ST0, SOUTHERN SUDAN (Future activity, but now DELETED!). The ARRL Membership Services Committee announced on March 13th that both the ARRL DXAC and Awards Committee have voted to delete Southern Sudan, ST0. While the status in Southern Sudan changed in 1983, QSOs made before January 1, 1995, will count for the deleted entity. There are two reasons for that. First, there have been accredited operations since 1983, and that raises a "fairness" issue. Second, the DXCC Desk has processed cards from those operations-many of them onto paper records. Because each ST0 credit would have to be individually checked, it would be very costly for the League in terms of time and money to search and remove post 1983 ST0 QSOs from the records. In fact, it might not be possible to do the job completely and accurately. The DXCC Countries List will now drop to 328. Also, this will probably be the last country to be added to the DXCC "Deleted Countries" list raising the total to 58. Once the new DXCCC2000 rules go into effect on March 31st, no more countries (or entites) will be added (Deletions will simply be removed). By the way, at the same time as the ST0 vote, both committees agreed to make no change in the status of Fernando de Noronha, PY0F, and Kure Island, KH7K. WHY WAS SOUTHERN SUDAN DELETED? The deletion happend because ST0 no longer meets the Point 1 DXCC Countries List Criteria. There has been a significant political change in ST0. The basis for country status of ST0 where the "Addis Ababa Accords" (which no longer exist), gave ST0 a "distinctively separate administration". The "distinctively separate administration" was dissolved by the government of the Sudan in June, 1983. Even though civil war continues in the Sudan, there is no government in the Southern Sudan. All of the region is under the administration of the Sudanese government.
Lastly, it has been reported that Claus, ST1AP, will be active from the Southern Sudan area as ST0AP between April and September. He is going there on a humanitarian mission. Activity time will be limited and will only be on SSB. Check 20 meters on 14332 at/around 0730z. Depending on where and who issued the license, it should count as the Sudan. QSL via DJ6SI.

TM, FRANCE. The French Bulletin "LNDX" reports to look for some French operators using TM4CQ during the CQ WPX SSB Contest.

VK9L, LORD HOWE ISLAND. Paul, N0AH, informs OPDX that he will be operating from here April 25-30th, as VK9LZ. Pauls states he will be focusing on the WARC bands. Paul admits he is very excited to be going, and he will be using his Yeasu FT-900 barefoot into an R-7000. He is currently awaiting local authority approval to use the R-7000 antenna. Paul will be staying at the Ebbtide Flats which has housed previous DXpeditions. Activity will be on CW/SSB, and he will try to split the time between the two modes. QSL to his home call, N0AH.

VP9, BERMUDA. Next weekend (March 21-22th) look for VP9ANV to be active in Bermuda Contest by celebrating the contest's 40th Anniversary. QSL via WB2YQH.

This message describes the rec.radio.amateur.*, rec.radio.cb,
rec.radio.info, and rec.radio.swap newsgroups, as well as their Internet
mailing list counterparts and complements. It is intended to serve as a
guide for the new reader on what to find where. Questions and comments may
be directed to Jeffrey Herman, KH2PZ, (jeffreyh@hawaii.edu), or Paul
Schleck, K3FU, pschlect@novia.net.

This message was last changed on 14 March, 1998.

History
=======

Way back when, before there was a Usenet, the Internet hosted a mailing list
for hams, called (appropriately enough) INFO-HAMS. Ham radio discussions
were held on the mailing list, and sent to the mailboxes of those who had
signed up for it. When the Usenet software was created, and net news as we
now know it was developed, a newsgroup was created for hams: net.ham-radio.
The mailing list and the newsgroup were gatewayed together, eventually.

Over the years, as the net grew, the volume of discussion became
progressively higher. First one by one, and then as part of two
reorganizations, what was once one group became many. In the process,
developments elsewhere on the net were reflected in the groups as they were
created, most notably the change to place all of the ham radio groups in one
hierarchy.

The collection of newsgroups continues to grow as more people join the net,
and as more topics of discussion gain volume, I expect to see more groups be
created as well. This follows what is happening on the rest of the net.

Nearly all of the radio newsgroups have corresponding mailing lists, the
notable exception being rec.radio.swap. There are also a few mailing lists
that don't have newsgroups.

The Current Groups
==================

It's important to post messages to the group that's appropriate for them,
and not to the groups that aren't. The whole idea of having different
newsgroups is so that folks who aren't interested in, say, homebrewing,
don't have to wade through messages about homebrewing on the way to read
about Field Day. Posting appropriately is just good etiquette.
```

The rec.radio.amateur.misc group is the catchall. It is what rec.ham-radio was renamed to during the first major reorganization. Any message that's not more appropriate in one of the other groups belongs here, from contesting to DX to ragchewing on VHF to information on becoming a ham.

The group rec.radio.amateur.digital.misc is for discussions related to (surprise!) digital amateur radio. This doesn't have to be the common two-meter AX.25 variety of packet radio, either; some of the most knowledgeable folks in radio digital communications can be found here, and anything in the general area is welcome. The name was changed to emphasize this, and to encourage discussion not only of other text-based digital modes, such as AMTOR, RTTY, and Clover, but things like digital voice and video as well. The former group, rec.radio.amateur.packet, was removed on September 21st, 1993. It is obsolete, and you should use .digital.misc instead (or the appropriate new mailing list, mentioned below). The group has .misc as part of the name to allow further specialization if the users wish it, such as .digital.tcp-ip.

The swap group is rec.radio.swap. This recognizes a fact that became evident shortly after the original group was formed: Hams don't just swap ham radio gear, and other folks besides hams swap ham equipment. If you have radio equipment, or test gear, or computer stuff that hams would be interested in, here's the place. Equipment wanted postings belong here too. Discussions about the equipment generally don't; if you wish to discuss a particular posting with the buyer, email is a much better way to do it, and the other groups, especially .equipment and .homebrew, are the place for public discussions. There is now a regular posting with information on how to go about buying and selling items in rec.radio.swap; please refer to it before you post there. To answer a frequently asked question: No, there is no mailing list that goes along with this group. If you can't read Usenet news directly, you're out of luck.

The group rec.radio.amateur.policy was created as a place for all the discussions that seem to drag on interminably about the many rules, regulations, legalities, and policies that surround amateur radio, both existing and proposed. Recent changes to the Amateur Radio Rules (FCC Part 97) have finally laid to rest the Great Usenet Pizza Autopatch Debate - it's now legal to order a pizza on the autopatch, if you're not in the pizza business - as well as complaints about now-preempted local scanner laws hostile to amateurs, but plenty of discussion about what a bunch of rotten no-goodniks the local frequency coordinating body is, as well as the neverending no-code debate, may still be found here.

The group rec.radio.cb is the place for all discussion about the Citizens' Band radio service. Such discussions have been very inflammatory in rec.ham-radio in the past; please do not cross-post to both rec.radio.cb and rec.radio.amateur.* unless the topic is genuinely of interest to both hams and CBers - and very few topics are.

The rec.radio.info group is just what its name implies: it's the place where informational messages from across rec.radio.* may be found, regardless of where else they're posted. As of this writing, information posted to the group includes Cary Oler's daily solar progagation bulletins, ARRL

bulletins, the Frequently Asked Questions files for the various groups, and radio modification instructions. This group is moderated, so you cannot post to it directly; if you try, even if your message is crossposted to one of the other groups, your message will be mailed to the moderator, who is currently David Dodell, WB7TPY. The email address for submissions to the group is rec-radio-info@stat.com. Inquires and other administrivia should be directed to rec-radio-info-request@stat.com. For more information about rec.radio.info, consult the introduction and posting guidelines that are regularly posted to that newsgroup.

The groups r.r.amateur.antenna, .boatanchors, .dx, .equipment, .homebrew, and .space are for more specialized areas of ham radio: discussions about antennas, the older tube based amateur, military, and commercial gear, commercially-made equipment, homebrewing, and amateur radio space operations. The .equipment group is not the place for buying or selling equipment; that's what rec.radio.swap is for. Similarly, the .space group is specifically about amateur radio in space, such as the OSCAR program and SAREX, the Shuttle Amateur Radio EXperiment; other groups cover other aspects of satellites and space. Homebrewing isn't about making your own alcoholic beverages at home (that's rec.crafts.brewing), but rather construction of radio and electronic equipment by the amateur experimenter. The .dx group is devoted to long distance amateur communications.

Except for rec.radio.swap and rec.radio.cb, all of these newsgroups are available by Internet electronic mail in digest format; send a mail message containing "help" on a line by itself to listserv@ucsd.edu for instructions on how to use the mail server.

All of the groups can be posted to by electronic mail, though, by using a gateway at the University of Texas at Austin. To post a message this way, change the name of the group you wish to post to by replacing all of the '.'s with '-'s - for example, rec.radio.swap becomes rec-radio-swap - and send to that name@cs.utexas.edu (rec-radio-swap@cs.utexas.edu, for example). You may crosspost by including multiple addresses as Cc: entries (but see below). This gateway's continued availability is at the pleasure of the admins at UT-Austin, and is subject to going away at any time - and especially if forgeries and other net.abuses become a problem. You have been warned.

Mailing Lists

In addition to the mailing lists that mirror the Usenet newsgroups, there also are a few that stand alone. These cover specific areas of ham radio, and discussion is focused on just those areas.

The cq-contest mailing list is for discussions of contesting in ham radio. To join, send email with the word "subscribe" on a line by itself to cq-contest-request@tgv.com.

The DX mailing list covers the finer points of DXing. This one is also joined by mailing "subscribe" on a line by itself, this time to dx-request@unbc.edu.

There's also a VHF mailing list, for VHF operators of the weak signal persuasion. You can join this one be sending "subscribe vhf" on a line by itself to vhf-request@w6yx.stanford.edu.

The QRP-L list is devoted to building and operating gear at low-power outputs. To subscribe, send an email to listproc@lehigh.edu and only write: subscribe qrp-l Your Name.

The TopBand e-list is devoted to all areas of operation on 160m. To subscribe, send an email to majordomo@contesting.com and only write: subscribe topband and follow the instructions you'll be sent.
This site, contesting.com, also hosts a couple dozen other ham-related e-lists. Use the above address, and only write: lists to get the entire index.

The Boatanchors e-list is devoted to the older tube-based ham, military, and commercial communications gear. To subscribe, send an email to: listserv@listserve.tempe.gov and only write: subscribe boatanchors

For homebuilding transmitters and receivers using tube technology, there is the Glowbugs e-list; send an email to:
majordomo@piobaire.mines.uidaho.edu and only write:
subscribe glowbugs <your@address.here>

The VHF DX discussion list can be accessed by sending an email to: majordomo@blacksheep.org and only writing: subscribe VHF-DX-discuss.

Qth.net hosts over 100 ham-related e-lists, including lists devoted to each state, manufacturer, mode, band - too many to state here. Send an email to majordomo@qth.net and only write: lists to get the complete index.

For one of the most complete indexes of email lists, see
http://pw2.netcom.com/~ac6v/pageae.html

Please do NOT send subscription requests to the mailing lists themselves; that doesn't work very often, and is very annoying to those on the list. Also, please keep your electronic mail address current with any mailing lists you subscribe to, as dealing with returned email is a nuisance for the person maintaining the mailing list.

A Few Words on Crossposting
==========

Please do not crosspost messages to two or more groups unless there is genuine interest in both groups in the topic being discussed, and when you do, please include a header line of the form "Followup-To: group.name" in your article's headers (before the first blank line). This will cause followups to your article to go to the group listed in the Followup-To: line. If you wish to have replies to go to you by email, rather than be posted, use the word "poster" instead of the name of a group. Such a line appears in the headers of this article.

One of the few examples of productive cross-posting is with the rec.radio.info newsgroup. To provide a filtered presentation of information articles, while

still maintaining visibility in their home newsgroups, the moderator strongly encourages cross-posting. All information articles should be submitted to the rec.radio.info moderator so that he may simultaneously cross-post your information to the appropriate newsgroups. Most newsreaders will only present the article once, and network bandwidth is conserved since only one article is propagated. If you make regular informational postings, and have made arrangements with the moderator to post directly to the group, please cross-post as appropriate.

829. Longitude, latitude and great-circle routes/distances?

Newsgroup: rec.radio.amateur.dx
Date: 1998-03-16 00:00:00 UTC
From: mschmidt@fh-koblenz.de
Message-ID: <MSCHMIDT.98Mar16114747@ultra101.fh-koblenz.de>
Source record: 29747
Cross-posted to: rec.radio.amateur.dx,rec.radio.amateur.misc

Hi all,

are there any good tables available showing correctly calculated
great-circle routes and antenna angles between points on the earth ball?

Well, you may say that many/most ham radio antennas have a beam width
of about 30 degrees and that therefore much precision may be not
necessary, but does this really count for all hams?

What about those e.g. running stations with low transmitter power?
What about distances not only DX but let's say medium distances,
aren't correct great-circle routes needed there to get best connections?

It's not that I'm a ham at the moment, it's only that some time ago my
son has been interested in radio amateur dx and that from then I have
had some ideas to setup great-circle route tables with dense points
(close together). My question is whether this would make sense and
whether hams are interested in such a thing?

Comments and feedback welcome.

Have a nice day

Michael

Hello Mr. Schmidt, try some of the software programs for great circle
distances and bearings at URL:
http://pw2.netcom.com/~ac6v/pageap.html#GEO

Or work with the Formula at URL:
http://pw2.netcom.com/~ac6v/pageaay.html

Some other ways to get the info at URL:
http://pw2.netcom.com/~ac6v/page5.html#BEAR

I recieved several letters from people thanking me for this post
recently, so I thought I'd post it one more time.
Hey guys and gals I found a really cool site that sells plaques.
They make it using a copy of your FCC license. Very nice plaques
high quality. Check it out a link is on my ham radio page.
or go directly there at
http://www.awards-r-us.com/wireless/products.cfm?siteid=3121
or my page at http://www.flinet.com/~duane/ham/ham.html
They also make other award plaques, so book mark them for later use.

There are several sources for mint stamps to help in QSL'ing. You send your
card and a SASE with the proper postage for the county you have worked. All
they do is put their card in your envelope and mail it back. I have used
William Plum's stamps m for years with great success. You can get a flyer from:

William Plum
12 Glenn Road
Flemington NJ 08822

Tel: 908-788-1020

He also has an excellent book on QSL'ing.

73 and CU in the pile ups.

Subject: Pirate Alert!!
Message-ID: <dee7f434.350f898d@aol.com>

DXers:

I just received two reports from the U.S. via e-mail of a station signing "7Z5OO" on 40 CW around 0600Z on Wednesday, March 18. Apparently the station had a very large pile-up going on. Well, the fact is, 7Z5OO has been QRT for the past 3 days. This is a PIRATE. Do not QSL 7Z5OO for any contacts on March 18. Guaranteed to be returned.

So, if this jerk continues to bootleg 7Z5OO, how can you tell the difference? Here's how:

1. Operating style - if 7Z5OO sounds like a novice QRS operator, K3UOC is not the operator. If the guy can't handle the pileup, K3UOC is not the operator. This is a pirate.

2. If 7Z5OO is S9+20 in Illinois and S8 in California, this is a pirate. I am not that loud. No way this guy is running the legal limit.

3. If this guy won't tell you his name is Mike when you ask, this is a pirate.

4. Operating time - I have restricted access to 7Z5OO. If I'm on at 0600Z, it's for a major contest only.

Basically, if it sounds bogus, it probably is.

I suspect this pirate is from Zone 22, not 21. There's a guy over there who has been sitting too close to his amplifier for way too many years.

I apologize for the inconvenience.

Hi,

As prommised earlier, some details about the upcomming transmission
from us at the 22nd. of March:

- TX will start at the late Saturday evening, the 21st.
- will last untill the late Sunday evening the 22nd.
- Frequency will be... prob... 6275 kHz.

And we'll be on air together with EMR.

This weekend, another "Short Shortwave Parade" will be aired !! Read
all about it at the HTP !!!!

FOR THE NEXT TIME:
==========

And, "we'll be back" (free from: Stallone...)

At April the 5th in the 51 mb. (about 5815 kHz).
More details about that one... later.....
It will be a real complete FRS-H broadcast, then.

MORE:
======

At this time, our newsletter # 17 is out !!

Details about how to get it at our site !!

Have a good listening & ok weekend,

The crew of The Free Radio Service Holland.

on-parliamentary parties.

That impudent propaganda of Polish integration with NATO brings adverse effects. People feel that it is a non-democratic attempt to impose American and West European power on Poland. This results in growing resentment towards the USA and Western Europe. But first of all such operation would entail enormous costs for Poland, a sudden slump of the weapon manufacturing industry and drastic reduction of the Polish army to 180 000 soldiers whereas Germany possesses 600 000 soldiers. NATO is viewed by the Polish society as a means of dismantling Poland and replacing the Polish Army by foreign, mostly German, military forces. This poses a serious danger to Poland because of the neo-Nazi aura in Germany and, above all, in the German Army. People in Poland are alarmed by a growing domination of Germany in the NATO structures and by pan-Germanic tendencies in reunified Germany.

People in Poland are afraid that integration with NATO will antagonize Poland and other Slavonic states, such as Russia, and Poland's close neighours: Belarus and Ukraine. NATO's presence in Poland is a threat not only to the Polish nation and other Slavonic countries, but also to Europe and the world. The American and European policy of confrontation with Russia would make any peace treaties or disarmament agreements impossible and might cause excessive armament race. The Western countries should remember that the NATO expansion means a new division of Europe resulting in a potential military conflict and in the isolation of Russia from the rest of the world. The NATO-free Poland should be a link between Russia and Western Europe, and, as a result, would bring considerable benefits to the USA and Europe.

We do hope that a thorough analysis of the issues presented above will be of reciprocal benefit not only to Poland and the USA, but also to the peace process in all the countries of Europe and the world.

The advice I have always received is to get the right postage, dollars are too valuable elsewhere and thus highly likely to be stolen.

> Is it still OK to send one dollar or one IRC for a QSL card or has the
> rate gone up? Is it better to buy the foreign stamps and affix them
> to the return SAE? Thanks, John - N2HNT <caylor@concentric.net>

866. Re: Is $1 or one IRC enough for QSL?

Newsgroup: rec.radio.amateur.dx
Date: 1998-03-21 00:00:00 UTC
From: Dennis Jacobson <n6ng@sj.bigger.net>
Message-ID: <35140847.6F18@sj.bigger.net>
Source record: 29834
Cross-posted to: rec.ham-radio,rec.radio.amateur,rec.radio.amateur.dx

My plan depends on how bad I want the card.

1. Desperatly.... Send stamps of the country on the envelope
2. Need it but not badly... Send 1 IRC with SAE
3. Want to take the chance I'll never hear from them again. $1 cash
4. All else via bureau.

Don't use 1 and 3 often and seem to get pretty good returns with item 2.

Good luck... Remember, the anticipation of receiving the card is the
best part of QSLing... (At least that is what they say).

I have lots of questions and one of the most puzzling for me right now is the following: When I start getting into hf I have to send some qsl cards all over the place. Now when you first qso with person you want to send a qsl card to do you tell them your address and all that stuff on the air and vice versa for the other person?

I haven't got a hf rig yet so therfore haven't been able to listen for the procudure. So i'm sure there are people out there who can tell me how this works!

Hi,

I'm practicing morsecode to become a radio amature. After 2 months of
practische it's time to start keying the code, this is where my problem
starts.

So far I did not find a (shareware) morse trainer on which I can just
connect my key (serialport1).
Can anybody give me some suggestions.

Thanks,

Peter Kerklaan

Yes, Dave Blaschke W5UN has the first 2 meter DXCC (all by EME). I believe there are a total of 4 people now with 2-meter EME DXCC. (Maybe a couple more?)

Congratulations on you're taking the HF plunge, Ian. Generally when one wishes to originate a QSL, he would refer to one of the available on-line callbooks, or databases. Usually if you mention that you'd like to QSL, the other station will tell you of any special requests, like going through the QSL bureau, his QSL manager, or to an address other than what is in the callbook. You would generally not give him your address, unless he requests it.

My further advice for you is that after you obtain your HF rig, Listen, listen, and listen some more, before getting on the air. Get the lay of the land first. Good Luck in your HF endeavours.

On Sun, 22 Mar 1998 04:08:27 GMT, jprocyk@direct.ca (Ian Procyk) wrote:

SB DX @ WW $OPDX.349
Ohio/Penn DX Bulletin No. 349

The Ohio/Penn Dx PacketCluster
DX Bulletin No. 349
BID: $OPDX.349
March 23, 1998
Editor Tedd Mirgliotta, KB8NW
Provided by BARF-80 BBS Cleveland, Ohio
Online at 440-237-8208 28.8k-1200 Baud 8/N/1 (New Area Code!)

Thanks to the Northern Ohio Amateur Radio Society, Northern Ohio DX Association, Ohio/Penn PacketCluster Network, AD1C, WB2RAJ/WB2YQH & The 59(9) DXReport, W3UR & The Daily DX, K6EXO, W7BX, N8PZD, CT1ETE, CX8AT, DJ5AV & DX News Letter, G4BUE & DX News Sheet, IK5MDF, JA1ELY and ZP5AZL following DX information.

3V, TUNISIA. Giovanni, I5JHW, will once again be active from 3V8BB. His activity will be from March 25-31st. Also joining him will be Sergio/ I5SNR, Danio/I5OYY, Gabriele/IK5ZTW and Roberto/IK5FTQ. The group will be active in the upcoming CQ WPX SSB Contest as a Multi/Single, possibly as 3V5I. QSL via I5JHW.

8Q7, MALDIVES (UPDATE). Lorenzo, IM5MDF, states he will now be active from Alimatha Island (IOTA AS-013) as 8Q7DF, May 2-10th. His activity will be on 80-10 meters and he provided the following suggested frequencies: 3780, 7080, 14180, 21280 and 28480 kHz. His equipment will be a Kenwood TS-50 w/AT-50 tuner using a "new Multicres Vertical Multiband" antenna and inverted "V" dipoles. QSL via IK5MDF. For updates, try the WEB page: http://www.qsl.net/ik5mdf

A4, OMAN. The "DX News Sheet" reports that the Royal Omani ARS (ROARS) hopes to be active in the last week of March, probably as A43DI from Daymaniyat Island. There is planned activity on 6 meters with IC-706 and 5 element yagi. Also, a 6m beacon, probably on 50100kHz, will be available. Permission has not yet been given for general 6m use in Oman, but Tony, A45ZN, is ready to be active when it is given. He will use a FT-690 and IC-706, 100W to a vertical and 5 element yagi at 60ft. Tony will also run a beacon on 50110 kHz.

A6, U.A.E. Bernie, W3UR, Editor of The Daily DX, reports that Ali's, A61AJ, station will be very active on all bands CW and SSB from March 21st through April 1st. Ali will also be active full time during the CQ WPX SSB Contest. By the way, Bernie is the QSL Manager for Ali and states a very nice color photo QSL card is available. QSL via W3UR,

Bernie McClenny, 3025 Hobbs Road, Glenwood, MD 21738, USA. He mentions no E-mail bureau cards.

CV8, URUGUAY. Look for Al, CX8AT, to be active during the 1998 CQ WPX Phone Contest (March 28-29th) using the special callsign CV8D. He states for QSLing to PLEASE send via his regular callsign CX8AT. All returns wil be sent via the bureau.

EP, IRAN. The "DX News Sheet" reports Hamid, EP3HR, is active, especially on 17 meters. Check 18150 kHz between 1400 and 1500z. QSL via I2MQP or direct to Hamid Reza Rahimi, P.O. Box 71555-158, Shiraz, Iran.

JAPANESE IOTA. Seven JA operators will be active from Awashima (IOTA AS-117) in the Sea of Japan. Activity will be for only two dates, April 17-18th. Operators will sign JG1SZE/0, JJ1SLI/0, JP1TBG/0, JQ1ALQ/0, JI3DST/0, JR9MAR/0 and 7K4FGQ/0. The group will set up three stations and operate on 40-10 meters CW/SSB. QSL via JARL Bureau to their homecall or direct.

JW, SVALBARD. Ragnar (Rag), OZ8RO, reports to OPDX that he has been bitten by the Artic bug again and will be active as JW5HE, April 3-9th. If he can get the computer/modem operational, he will spend some time on RTTY this time. Otherwise, he will focus on 10 and 18 MHz and possible 24 if there are openings. QSL to OZ8RO CBA.

KH0, MARIANA ISLANDS. Zorro, JH1AJT, will be active from the island of Saipan as KG6SL. Activity will be mainly SSB on 40-10 meters. The length of his stay is not known. QSL via home call. Meanwhile, KH0AC was heard on 15 meters this past weekend on 21255 kHz at 2215z and 21295 kHz at 0215z. QSL via K7ZA. Also heard on 15 meters was Larry, KH0I, on 21280 kHz at 0145z. He was also heard on 80 meters (3793 kHz) beginning around 1300z.

NEW PREFIX. It has been reported that Terry, VR6TY, on Pitcairn Island, has stated that the VR6 prefixes will switch to the VP6 prefix beginning May 1, 1998. The VR prefix was apparently given over to China on or about the same time that Hong Kong was returned (July 1, 1997).

OTHER NEW HAT TO WEAR. According to the "ARRL Letter", the current ARRL DXCC Manager Bill Kennamer, K5FUV, will replace Chuck Hutchinson, K8CH, as Membership Services Manager at ARRL Headquarters effective April 20. Hutchinson is stepping down and into a part-time role for medical reasons. The "Letter" did not mention whether Bill would be replaced or stay on as DXCC Manager.

PACIFIC DXPEDITIONS. Members of Yamato ARC (JA1JQY, JA1KJW, JA3MCA and JA8VE) will be active from Tuvalu (T2) and Fiji (3D2). The group will be in Tuvalu from April 25th to May 1st and their call signs will be issued upon their arrival. They plan to have three 100 watt stations on 160-10 meters CW/SSB. From May 2-3rd, they will be active from Fiji as 3D2HI (JA1KJW), 3D2KZ (JA8VE), 3D2SH (JA1JQY) and 3D2TK (JA3MCA). QSL via their home callsigns.

PORTUGUESE DX NET. Paulo, CT1ETE, reports that the Portuguese DX Net will be reactivated again. The net will be held on Saturdays between 1000 and 1200z on 21280 kHz or 28480 kHz. Net Controller will be CT1ERK.

QSL INFO AND NEWS.....
You can now look up your QSOs for the ZL7DK operation on the WEB. The QSOs listed are by band and mode (no times). Check out the WEB site at:
http://ve7tcp.ampr.org/cgi-bin/zl7dk
or
http://wwwiti.cs.uni-magdeburg.de/~hoeding/hamradio/zl7dk_main.html

Mike, NF4W, states he would like to become a QSL Manager for a DX station and mentions he has plenty of time to take care of business. Mike can be reach at: Michael W. Taylor, 115 Crompton Drive, Pelzer, SC 29669. His E-mail adress is: nf4w@mci2000.com

SPECIAL EVENT (Submarine Memorial Radio Reactivation). On April 25th and 26th, the radio rooms on as many as 23 memorial submarines will come alive with ham activity. This year's lineup will include the Torsk in Baltimore, the Cod in Cleveland and the Growler in New York City. The suggested frequencies will be 3843, 7243, 14243, 21343 and 28343 kHz. QSL information will be available on the air. For more information, E-mail Jim Flanders, W0OOG, at jaf@sprintmail.com

S0, WESTERN SAHARA. Look for S08R and S0RASD to be active on the air between March 24th and April 20th. Activity will be mostly on 40, 80 and 160 meters, but 20/15/10 meters will also be used. Reports indicate that the area shall become independent and may receive a new prefix in 1999. QSL direct to EA2JG, Arseli, Barrena 6, 01408 Luyando Alava, Spain. For more information, a WEB site has become available at the following URL address: http://web.jet.es/rasd/

S2, BANGLADESH. Mamtaz (YL), S21J, has been quite active on 20 meters (between 14200-14216 kHz) this past weekend between 1230 and 1400z. QSL via Mamtaz Shahid, G.P.O. Box 3512, Dhaka-1209, Bangladesh.

USI/IOTA ALERT. The group from the USI Award informed OPDX that Dennis, AA3ID, will be on Hatteras Island (IOTA NA-067, USI NC-005S) from March 16-28th. He will have 80-6 meters available. They indicated that if you need this island, try giving him a call on 14260 or 14265 kHz because Dennis will be monitoring while doing "useful" work down there.

VK9, NORFOLK ISLAND. "The 59(9) DXReport" states Jim, VK9NS, is now active on RTTY (No QSNs mentioned). His activity on 160/80 meters continues. Check around 1831 kHz between 1115 and 1145z and on 3507 kHz at 1100z. Jim can also be found daily on 14222 kHz beginning about 0400z. QSL direct to P.O. Box 90, Norfolk Island, 2899 Australia.

XV, VIETNAM. Torsten, XV7TH, was heard active this past week on 28500 kHz (long path) around 1430z. He was also heard on 14195 kHz around 1500z. Meanwhile Charlie, K4VUD, who was recently in Nepal and work Torsten from 9N land, states that XV7TH can be found on Sundays at 1000z on 21250 or 21179 khz.

YB, INDONESIA. Jorma, OH2KI, will be active until March 30th, either as XYB9BV or YB9/OH2KI. Activity will be mainly on CW. QSL via OH2KI.

ZP0, PARAGUAY. Tom, ZP5AZL, will be using the special callsign ZP0Z in the CQ WPX SSB PHONE Contest. He will be in the contest as a Single Op 20 meter Hig Power entry. QSL via W3HNK or in Paraguay via ZP5MAL.

1998 Visalia DX Convention. The Southern California DX Club is pleased to announce the programs for the upcoming DX convention. The dates for the convention are May 1, 2 and 3rd. More information about the convention, including a list of hotels, a registration form and the complete preliminary program, can be found at the following WEB page:
http://www.primenet.com/~scdxc/dxconv98.html
Or E-mail any inquiries to: visalia@scdxc.org

Consumptions: with tone cw 22.5 nominal Kws, factor of power 0.98 .
Input power 380/440 volts, three phases + neutral
Inclusive of exciter Redifon EK203N or Harris 131
Aplifier to Pipes: Final 1 pipe 4CX10000D
Dimensions: Height 175 cm, Depth 70 cm, Width 108 cm, Weight 760 Kg
Autotunig.

Siemens:
It doesn't originate from a ship, in fact it was of a terrestrial station.
Power: Telegraphy power on A1,F1,F4 and F6 = 5 Kw
RF troppower on A3A, A3j and A3B = 10Kw
Carrier by A2 and A3 =2.5 Kw
Input power: 380/440 volts, three phases + neutral
Inclusive of filter of the air, exciter Siemens.
Amplifier to Pipes: Final 1 pipe RS2010 Siemens
Dimensions: Heigt 160 cm, Width 150 cm, Deep 60 cm, Weight 1500 Kg
Autotunig.

Todd Little said:
" 5 WPM is either no-code or know-code, and if it's the latter, why
wouldn't 1 WPM or 1 WPD be sufficient? What's clear is that
you can't have it both ways."
This is why some of us pro coders are against changing the code
requirement. It seems some people don't want to compromise,
it's all or nothing with them.

Look for a copy of Super Morse. It is shareware and is beautifully done.

Greetings,

I have been tasked with organizing a "Get to know Ham Radio" Pizza
party for my club (HARC... http://w8yy.resnet.mtu.edu) for this Saturday
March 28 at 0900 UDT (1400 EST) until ?? (whenever we finish eating the
pizza, and everyone leaves).

I am looking for anyone that would be interested in working us so
that we can show prospective Amateur Radio enthusists how things work, and
give them a chance to transmit.

During the "presentation", we want to do a little CW and probably
a lot of voice. If anyone is interested, drop me a line at
dmstockt@mtu.edu or w8yy@mtu.edu

I don't know what to suggest for freq's, but I will post a
follow-up later this week, and also send direct e-mail to anyone
interested.

We are probably looking at about 20 non-hams wanting to talk, so
the more the merrier.

Thank You, 73
Daniel M. Stockton (KC8GYS)
Recruitment Party chairperson

889. Propagation in KH6-land??

Newsgroup: rec.radio.amateur.dx
Date: 1998-03-24 00:00:00 UTC
From: Casey Bahr <NOSPAMcasey@foreign-interests.com>
Message-ID: <3517D602.56C9@foreign-interests.com>
Source record: 29857

Well, this is not exactly about DX, but no other
rec.radio.amateur group on my list seemed as relevant.

I will be vacationing in Kauai in the near future and if there
are any KH6'rs reading this, I would appreciate some advice
about propagation to the mainland and other qths on 20
meters, i.e. best times, general conditions, etc. I'll be
operating mobile with about 50 watts, mostly CW.

tnx es 73,

Casey, KS7J

Greetings,

Perhaps you would find one of several available propagation
prediction and system analysis applications useful?

Fellow ham radio operators
I did not post this crap. But I know who did and I don't think that you
or I will be seeing any more of it. Mr James Obrien KD4CDB is no longer
with mindspring. THis is a newsgroup and I thought that I would spead
the word so we could all rejoice in Mr Obrien's misfortune. I hope now
that the real idoit is gone the News group will return to normal.
Again Mr Obraindead is no longer with mindspring.com. Call Harry Smoak's
office and thank him.

The NNTP-Posting-Host shows these series of messages originated from mindspring.com. Oris doesn't post from that site. Someone at mindspring.com is forging Oris' name and email address to these messages.

Oris, rather than feeding the fire, just turn your back and ignore the remarks. You'll turn out to be the hero if you can disregard the items coming from mindspring.com.

Hello Pushpendra -- I have contacted several VU stations over the years.
Here in San Diego, the following VU stations were reported on our packet
cluster during the month of March of this year.
VU2ELJ -- 20 meters
VU9RE -- 20 meters
VU2GSM -- 40 meters
VU3BBY -- 20 meters
Stations from India are not common -- but they are on the air.

So far I've found Germany and Australia have high enough postage to need 2
green stamps. The biggest advantage of using stamps is that they have a very
small chance of being stolen. Also the replies with stamps are very fast.

905. DXPEDITION UPDATE: H40AA

Newsgroup: rec.radio.amateur.dx
Date: 1998-03-25 00:00:00 UTC
From: "Tim Totten, N4GN" <n4gn@iglou.com>
Message-ID: <dxpedition-announce-h40aa-199803251139@ve7tcp.ampr.org>
Source record: 29869

[Forwarded via the DXpedition Announcements Mailing List. See
http://ve7tcp.ampr.org/DX/Expeditions/ for details.]

Update: The Temotu Islands, H40AA
22 March, 1998

All systems are "go" for the launch of the H40AA DXpedition. Some of the team members have already arrived in Honiara, the capital of the Solomon Islands, and have been very busy making final preparations. Limited radio activity can be expected starting this weekend, while an all-band effort will be made in the WPX SSB contest next weekend.

Remember, even though the contest effort will be taking place from the DXpedition site in Temotu, QSOs will count for Solomon Islands DXCC credit (H44) before 2359Z on 31 March. At that time, the H40AA call will be debuted, and QSOs will begin counting for Temotu (H40) DXCC credit, pending approval of the new country application.

There has been some confusion regarding the prospect of Temotu being added to the DXCC List. It should be pointed out that the application is NOT based on political independence--Temotu is clearly within the political influence of the Solomon Islands. Rather, Temotu qualifies for separate DXCC status by reason of separation by water. The new DXCC rules, which become effective at 2359Z on 31 March, change the separation criteria from 225 mi to 350 km. Because Temotu is separated from it's "parent" country, the Solomon Islands, by more than 350 km, it clearly meets the new criteria. Thus, the addition of the Temotu Islands to the DXCC List should be a rather routine affair.

Many DXers have also asked specifically which islands will be included in the new DXCC entity. The answer is all the islands that make up the Solomon Islands' Temotu Province. This includes the Santa Cruz Islands, the Reef Islands, the Duff Islands, Tikopia Island, Anuta Island, and Fatutaka Island. Altogether, the islands of Temotu have a surface area of only 926 sq km, although they are scattered over more than 150,000 sq km of the South Pacific.

To further confuse things, the largest island in Temotu--officially known as Nendo--is more commonly referred to as Santa Cruz Island. The H40AA operation will take place here, in a small village known as Lata (10 deg 43.5 min S, 165 deg 48.1 min E). Although it is the provincial capital, only about 1500 people live in Lata. Far from the beaten path of tourists, only one small resort is available, and its owners have agreed to allow it to be converted into "Operations Central" for the H40AA DXpedition.

Getting around in the Solomons can be both a challenge and an adventure. To keep the expedition within schedule and to move a large amount of antennas and equipment, two small aircraft have been chartered from Honiara to Santa Cruz. This will also allow the necessary power generators to be brought along as backup to the limited and sporadic service on Santa Cruz.

Lata is very hot, humid and WET--the annual rainfall often exceeds 6000 mm (2350 in). Because the H40AA operation will be taking place during the rainy season, average daily rain totals of 25 mm (1 in) or more are expected. The associated high QRN levels will make for challenging reception at times, particularly on the low bands.

Three regional coordinators--Martin, G3ZAY; Bill, K6GNX and Gary, K4MQG--have been appointed to provide the H40AA DXpedition with a reliable, two-way information channel. These coordinators will communicate any information from the team to the DX community during the actual operation, as well as provide the DXpedition operators with valuable feedback from their respective geographical areas. The idea is to help the operators maximize the short openings on the most critical paths from Temotu, particularly Europe.

The coordinators can be reached via e-mail for any questions and/or comments related to H40AA:

Martin, G3ZAY: eupilot@dial.pipex.com
Bill, K6GNX: k6gnx@telemetry.com
Gary, K4MQG: gdixon@infoave.net

The H40AA team is sad to report that one of the original team members, Kari, OH2BC, will be unable to make the journey to Temotu. Kari recently suffered a fall in which he broke several bones in his hand. Even though he will miss the excitement of running the pileups, Kari continues to work in many key ways behind the scenes to contribute toward the ultimate success of this operation.

As an experiment, many of the pileups during the H40AA operation will be digitally recorded. The idea is to provide play-back of these QSOs at DX conventions and hamfests. The recordings will also help ensure that the log and QSLs are as accurate as possible.

Based on input from several DXers, two changes have been made to the frequencies listed in the original H40AA announcement. Please note the following new transmit frequencies:

160 (SSB and CW): 1824.5 kHz
10 SSB: 28395 kHz

Finally, because this will be a "new one" for everyone, the primary goal of this operation is to maximize the total number of individual DXers who make at least one QSO with H40AA. The secondary goal is to make a large number of total QSOs by operating on multiple bands and modes.

Every effort will be made to exploit the critical openings to Europe, which will be the most difficult target area to work. European DXers are reminded that both short path and long path opportunities exist for working Temotu. It is anticipated that short path will normally be best for Northern and Eastern Europe, while long path will be most common for Southern and Western Europe. Of course, this can vary by band, time of day and many other factors. The cooperation of DXers in other target areas will be most appreciated when the H40AA operators are working Europe.

906. DXPEDITION UPDATE #1: H40AA/H44RY

Newsgroup: rec.radio.amateur.dx
Date: 1998-03-25 00:00:00 UTC
From: "Tim Totten, N4GN" <n4gn@iglou.com>
Message-ID: <Pine.GSO.3.96.980324002752.25981A-100000-iglou1@ve7tcp.ampr.org>
Source record: 29870

[Forwarded via the DXpedition Announcements Mailing List. See
http://ve7tcp.ampr.org/DX/Expeditions/ for details.]

The call sign for the all-band effort from Temotu in this weekend's CQ WPX
SSB contest has now been confirmed as H44RY. While this operation will
take place from the H40AA DXpedition site, it will count for Solomon
Islands DXCC credit because it will take place prior to the new DXCC rules
becoming effective at 2359Z on 31 March.

Another call sign, H44DX, has been assigned for use from Honiara, the
Solomon Islands' capital, as the DXpedition operators pass through on
their way to and from Temotu. Because of the operators' varying travel
schedules, the H44DX call may be heard on the air before, after, and even
during the H40AA operation. Be sure you know which DX you are working!

Remember, H44RY and H44DX QSOs count for Solomon Islands credit, while
H40AA QSOs will count for the new Temotu Islands DXCC entity, pending
approval of the application. QSL H44RY via OH1RY and H44DX via OH2BN.

Also, the H40AA DXpedition Web Site is now available at the following URL:

http://www.iglou.com/n4gn/h40aa/

Although currently very basic, the site will continue to be expanded and
improved.

You make out the card using the JT call sign.
Then send it to his home address, or QSL route. You might want to check out the
GO list and see if that station has a QSL manager. If he has a manager then send it
to the manager. Include at least 2 bucks not more than 3.

N6VV Announces operation from Mokil Atoll
Micronesia , Operation scheduled for
1 to 7 June 1998.

* New IOTA Island operation.
First time operation from Mokil Atoll,
Federated States of Micronesia (V63)
State of Pohnpei (IOTA letter d.)

* Mike NG7S joins the team along with
Lew N6VV and Dan W7DR. Mike was V31RL
with first time operation from NA180.

* Multi-Op entry in CQ WPX CW contest from
Pohnpei Island Micronesia prior to the
Mokil operation. Multi-OP as V63VV

N6VV,W7DR and NG7S have received permission to
visit the remote Micronesian island, Mokil Atoll.
Lew N6VV has received the callsign V63VV. Dan
and Mike will also be receiving V63 callsigns.

Schedule:

24-31 May - Kolonia, Pohnpei Micronesia (IOTA OC-010)
during this time the crew will operate
the CQ WPX CW contest multiop as V63VV
from this former German Colonial City

1-7 June - Mokil Atoll

Equipment includes:

Yaesu FT-1000MP
FinnFet FF-1001 Solid State KW amplifer
Force/12 C3S Yagi
Monoband GP Verticals for 40,20,15 M
R-7000 Vertical
Wires for 80 and 160M

CALLSIGNS: on Pohnpei (OC-010) V63VV + yet to be assigned calls

on Mokil (OC-???) V63VV/p + yet to be assigned calls

QSLs : V63VV to N6VV (CBA or Bureau)
W7DR and NG7S to home call

I have started a 50.400 AM net on Friday nights at 19:00 PDT.
It is run from Saugus Ca DM04rk by KC6WFS Dave Booth.

I'll be using a Gonset G-50 to a ARX-6.

If you are not sure if there is a net in your area check my net page.

http://www.geocities.com/Hollywood/5860/nets.html
I have a up to date list of 6m AM nets.

If you live in the local area please join in on the net.

Thanks,

Dave Booth KC6WFS DM04rk

>Did anyone of you ever work a VU... callsign ? (INDIA)

Only once, in my 17 years of hamming. Didn't get the QSL either. :(

From my part of the world (W5), India is as tough a target as there is, propagationally. LONG haul, and straight over the pole. Though, I understand VU hams are limited to fairly low power (200 W or so?) as well which compounds the difficulty.

I think you copied his call right! GB ran out of "G" calls and started
using the "M"s either last January 1 or the year before (can't remember).
If you look at the Allocation of International Call Sign Series, you will
see that MAA through MZZ is allocated to United Kingdom of Great Britain and
Northern Ireland. Good DX! 73, John, K2CIB

934. Antique Radios & Test Equipment 4 Sale CHEAP!

Newsgroup: rec.radio.amateur.dx
Date: 1998-03-29 00:00:00 UTC
From: Dean <deanntx@e-tex.com>
Message-ID: <351E9C01.F5E47F3A@e-tex.com>
Source record: 29802

Hello everyone!

I have just got through adding a lot more antique radios to the site. All of them have pictures now, so there is no mestique as to what they look like. I have also added a few Test Equipment items as well. Remember, these radios are offered as is with no warranty or guarantee if they work or not. Some are missing knobs, cases, power cords, microphones or whatever. I have priced these radios and such very VERY CHEAP!
These radios are for the collectors out there that want to rebuild, restore or just to tinker with some of the older equipment, and as you will see, they are priced to sell.
We have already sold quite a lot of these old radios to a lot of you out there, so make sure you check the list out again, for it has some interesting stuff on it as well.
I want to also add that there is a new REGISTERED room on the IRC that you can chat with other people with the same interests as you, RADIOS! I

know a lot of the hams out there do not like to associate with CB'ers and vice versa, but hey, we all started with that junky old CB that is long gone now.
The name of the room is #CB_Radio, and it is located on the Undernet group of servers.
It is up 7 days a week, 24 hours a day, 365 days a year now. If you are just lurking, or want to buy, sell, trade, swap, wish for or whatever your need be, this Chat Room will be a good place to start. Don't let the name of the room fool you, for it is for everyone that has an interest in some kind of radio communication.
Again, the name of the room is "#CB_Radio", and is located on the Undernet group of servers. If you need software to access the IRC, you can get the latest copy of "mIRC" on our website.
If you would like to take a look at some of the Antique Radios that we have, click or go to the URL below.

http://www.e-tex.com/cbcity

Thanks for taking the time to read this entire message. I hope that I did not offend many of you. I am not out to try and make a killing with all this, in fact I am probably taking a loss, for I am sure these radios cost us a lot more than what we are selling them for.

I remember doing the same thing with a station on Reunion in the early
1980's. On the guy's card, he noted that cards sent directly to Reunion
get routed via Africa and the green stamps/IRCs almost always get stolen
from the envelopes there. As I recall, he said a better way is to address
it to Reunion Island, France, using the correct postal code which I don't
remember.

939. Selling Sommer Beam

Newsgroup: rec.radio.amateur.dx
Date: 1998-03-29 00:00:00 UTC
From: donstone@gate.net
Message-ID: <6fmaqf$1ndc$2@news.gate.net>
Source record: 29807

I am planning on selling my Sommer DJ2UT seven band
beam (40, 30, 20, 17, 15, 12 and 10 meters). Reason:
there is simply too much wind at this location. This
is the heavy duty version of the XP707 with dual
extruded aluminum booms (no bracing required). It
will be at least 2-3 months before I can have it
disassembled and lowered from the roof of this building.
I paid about $1100 for it directly from Alf Sommer.
Make an offer. Beam located in Clearwater, FL area,
cannot ship (the booms are 20 foot long, continuous).
Don Stoner, W6TNS donstone@gate.net

SB DX @ WW $OPDX.350
Ohio/Penn DX Bulletin No. 350

The Ohio/Penn Dx PacketCluster
DX Bulletin No. 350
BID: $OPDX.350
March 30, 1998
Editor Tedd Mirgliotta, KB8NW
Provided by BARF-80 BBS Cleveland, Ohio
Online at 440-237-8208 28.8k-1200 Baud 8/N/1 (New Area Code!)

Thanks to the Northern Ohio Amateur Radio Society, Northern Ohio DX Association, Ohio/Penn PacketCluster Network, WB2RAJ/WB2YQH & The 59(9) DXReport, N4GN, N6VV, W7TSQ, K8XP, 7N1GVB, F6AJA & LNDX, G4BUE & DX News Sheet, I8NHJ, IT9JPK, ON4WW, PS7AB, SM5MX, SP2BIK, SP5ELA, SU1HM and YC0FTD following DX information.

3B8 & 3B9, MAURITIUS AND RODRIGUEZ ISLAND. The "DX News SHeet" reports that Laurent, F5MUX, will be active sometime after April 1st from Mauritius and also a brief operation from Rodriguez. He will only use 100 watts in a R7 vertical. QSL via home call.

7X, ALGERIA (UPDATE). Mark, ON4WW, reports that he will be leaving for 7X this week. His license will be looked at or arranged upon arrival (TNX to info provided by F6FNU). He is also thankful for the help provided by EA5XX and S01M, that may make an operation from West Sahara possible if Mark can cross the border. His possible callsigns (but not vertified at this point in time) may be 7X0WW and S04WW. His stay in 7X-land for QRL purposes is initially 6 months. Mark will use a 100 watt rig (TNX to Yaesu of Europe) and a G5RV antenna (TNX ON4MA). Activity will be mostly CW and low bands. QSL via ON5NT. Mark mentions that for those of you who are still waiting for 9X/ON4WW and 9X4WW cards, Ghis (ON5NT) has received a new batch of 20,000 cards for those calls, and 5X1T. Bureau cards should go out any time as well now.

EA8, CANARY ISLANDS. The German group (DL7AU, DL7URB, DL7UBA, DF8XC and DL7VRO), who were active as ED8CTM in the CQ WPX Contest this past weekend, will continue to be active until April 6th. Operations will be on all bands, CW, SSB and RTTY. QSL via DL7VRO.
Also, look for Ron, G4DIY, to be active April 5-11th as EA8/G4DIY. Activity will be maninly CW on 20, 17 and 10 meters. QSL via home call.

FT5/X/Y/Z, CROZET, KERGUELEN, AMSTERDAM/ST. PAUL ISLANDS. The French DX bulletin "LNDX" reports Rene, FR5HR, will start shortly for a new trip around these rare island for one and one half months. They are not sure

if he will operate from each place. The QSLs for his previous trip are still at the printer's. PLEASE be patient. QSL via the following address: Rene Allegre, 56 rue Leconte de Lisle, 97411 Bois de Nefle, France

H40, THE TEMOTU ISLANDS (Update). Tim Totten, N4GN, sent out three press releases throughtout the past weekend. OPDX InterNet Subscribers will receive ALL/COMPLETE unedited press releases as an additional bulletin. The following are excerpts from Tim's releases for our "Packet Radio" readers..... Tim states, "All systems are 'go' for the launch of the H40AA DXpedition." Team members over the past week and weekend were very busy making final preparations. Activity by team members, using H44RY, was heard this past weekend. As the team did an all-band effort in the CQ WPX SSB Contest. Remember, even though the contest effort will be taking place from the DXpedition site in Temotu, QSOs will count for Solomon Islands DXCC credit (H44) before 2359z on March 31st. At that time, the H40AA call will make its debut, and QSOs will begin counting for Temotu (H40) DXCC credit pending approval of the new country application. Temotu will qualify for separate DXCC status by reason of separation by water. The new DXCC rules, which become effective at 2359z on March 31st, change the separation criteria from 225 miles to 350 km. The Solomon Islands Temotu Province includes the following islands: Santa Cruz Islands, the Reef Islands, the Duff Islands, Tikopia Island, Anuta Island, and Fatutaka Island. The DXpedition will take place on the largest island in Temotu. The island is officially known as Nendo and is more commonly referred to as Santa Cruz Island. The H40AA operation will take place in a small village known as Lata (provincial capital). The H40AA team is sad to report that one of the original team members, Kari, OH2BC, will be unable to make the journey to Temotu. Kari recently suffered a fall in which he broke several bones in his hand. The team also reports two changes have been made to the frequencies listed in the original H40AA announcement (refer to OPDX.348). Please note the following new transmit frequencies: 160 meters (SSB and CW) - 1824.5 kHz and 10 meters SSB - 28395 kHz. The team has received another call sign, H44DX, to be used from Honiara, the Solomon Islands' capital, as the DXpedition operators pass through on their way to and from Temotu. This callsign (H44DX) may be heard on the air before, after, and even during the H40AA operation. H40AA will hit the air waves at 2359z, March 31st, and will continue through the early hours (UTC) of April 13th. Normally, three stations will be in service at any given time. For the first several days, two stations will run almost exclusively SSB--primarily on 20 and 15 meters. During this time, the third station will concentrate on CW, emphasizing 40 meters at night and 17 meters during the day. Beginning April 6th, the emphasis will change to CW operation, paying more attention to the other bands. RTTY operation will begin on April 8th, and will be limited to 15 and 20 meters. The H40AA team would like to emphasize that they intend to stick to the basic plan outlined above. In this way, all DXers will be given the maximum opportunity to make at least one QSO with this 'new one' during the early days of the operation. Following is the complete, updated list of H40AA transmit frequencies incorporating the changes announced earlier:

CW - 1824.5, 3504, 7004, 10104, 14024, 18074, 21024, 24894, 28024 and 50104 kHz
SSB - 1824.5, 3775, 7045, 14195, 18135, 21295, 24945, 28395 and 50104 kHz
RTTY - 14083 and 21083 kHz

Lastly, remember, H44RY and H44DX QSOs count for Solomon Islands credit, while H40AA QSOs will count for the new Temotu Islands DXCC entity, pending approval of the application. QSL H44RY via OH1RY. QSL H40AA and H44DX via OH2BN. Also, the H40AA DXpedition Web Site is now available at the following URL: http://www.iglou.com/n4gn/h40aa/

DX NEWS FLASH..... As your editor was ready to hit the key to send out OPDX.350, a message was received from Kaz, JH1ORA, stating well-known HIDXA DXer Jim Smith, VK9NS, is in the Solomon Islands and will be active from the Temotu Province Islands group. Jim was in Honiara and moved to Santa Cruz Island on March 28th. After 3 hours of sailing by canoe, Jim is now on Pigeon Island located in the Reef Island group. He is currently signing H44/VK9NS and will change his callsign on April 1st to H40AB. His operation should count as the same entity as the H40AA operation. QSL via HIDXA (VK9NS).

JAPANESE ACTIVITY RARE IOTA. A very large group of Japanese operators will activate an island in the Honshu's coastal group (AS-117). Their activity will be from Awashima (otherwise know as Awa Island) beginning 0900z on April 17th and lasting until 2100z April 18th. Operations will be on CW/SSB on 80-6 meters including the WARC bands (check IOTA frequencies). The operators callsigns and addresses were provided to OPDX, but we suggest you listen for details by the operators. Operator's callsign/address are:
JG1SZE/0 Kyoji Ota (QSL MGR), 2-27-12 Nakadai Itabashiku Tokyo JAPAN 174
JJ1SLI/0 Masaji Sakakibara, 2-673-13 IzumiCho Sakado City Saitama JAPAN 350-02
JP1TBG/0 Junichi Ninomiya, 284-1 Kodaya Moroyamamachi IrumaGun Saitama JAPAN 350-04
JQ1ALQ/0 Tateo Tamura, 3-38-11 Toyoda Hino City Tokyo JAPAN
JI3DST/0 Takeshi Funaki, 2-28-26 Hannanmachi Abenoku Osaka JAPAN 545
JR9MAR/0 Toshiaki Ito, 113 Furuueno Syoukawamachi HigashiTonamiGun Ishikawa JAPAN
7K4FGQ/0 Atsushi Murai, 1-37-1 Minami Ogikubo Suginamiku Tokyo JAPAN 167
7K2MEZ/0 Katsurou Maeshima, 202 Niwata Kopo 2764-5 Ishioka Ishioka City Ibaraki JAPAN 315

JT1, MONGOLIA. A large group of Italians will be active from Ulan Bator, Mongolia from April 7-14th. Operators will included I0SNY (leader), I1JQJ, I0TIC, I8NHJ, IK0AEH, IK0FUX, IV3FSG, IK5/EA8AFJ, IK0SHF, IV3ZAC and IZ0AZQ. The group will have two complete HF stations on the air 24 hours and a third station on the satellites plus 6 meters. Their planned activity will be 160-6 meters which includes CW, SSB and RTTY. The special callsign JT1Y will be used from the Mongolian Radio Sports Federation Club station JT1KAA (located in Zone 23). The team plans on leaving a 40 meters monobander behind for the JT1KAA station. The following are the suggested

frequencies:

CW - 1835, 3505, 7005, 10105, 14015, 18075, 21015, 24895, 28015, 50115
SSB - 1840, 3780, 7080, 14185, 18145, 21285, 24945, 28485, 50145
RTTY - 14080, 21080 kHz

Log checking will be available on the 425 DX News WEB pages. The team plans to upload the logs to the Web on a daily basis in order to let amateurs check them while the activity is taking place. Contributions and QSLs can be sent to I0SNY, Nicola Sanna, Str. Gualtarella 8/M, 06132 S. Sisto - PG, ITALY. Visit the JT1Y WEB site for updates at: http://www-dx.deis.unibo.it/htdx/jt1y/

QSL INFO AND NEWS.....
OPDX was advised that the ZK1ZZP cards were received from the printers and that the process of sending them out has begun. A large batch of cards has already been mailed out, but we were told they will now be going out on an almost daily basis.

Just before the contest weekend, Dimitris, SV1CIB, informed OPDX that he received the special callsign, J43PTR, for the CQ WPX SSB Contest. If you were lucky to catch him, QSL to SV3AQN via the bureau or direct.

A group of Indonesian were active from Baturaden, in Central Java, Indonesia, using the special callsign YE2B during the CQ WPX SSB Contest. QSL to YC0FTD, via the bureau or direct (with one green stamp) to: Mr. Andreas Wisnu Widjaja, PO Box 6193 JATH, Jakarta 13061, Indonesia.

OPDX has mentioned this once before, and we were asked to do it again. QSLs for Paul, A35RK, ONLY (repeat only) go to Bob, W7TSQ. Paul does not have QSL cards. DO NOT EXPECT A RESPONSE IF CARDS ARE SENT TO THE A3 BUREAU AS THOSE CARDS WILL NEVER REACH HIM. Also, PLEASE do not send E-mail to Paul. He (Paul) has asked a particular publication (ed. we choose not to list it) to delete his E-mail address and block any updating. It costs Paul about $1.00 per min as he has to pay for online time and pay by the minute for a long distance call to send/receive messages. If you have any questions etc. for Paul, please send them through Bob, W7TSQ. He has ways to get them to Paul which does not cost him money.

QSLs for II9ZZ, who was Gianni, IT9PKO, active during the CQ WPX SSB Contest, should have cards sent to IT9PKO: Gianni Casiraro, P.O.Box 10, 97015 Modica Bassa, Italy.

The new address for F6HMJ (specially for 3B8/F6HMJ) is: Jacques Motte, Le soleil levant - B8, 4 avenue des rives, 06270 Villeneuve - Loubet, France.

SN0, POLAND (Special Event). A special event station SN0JG will be active from Gdansk, from April 3rd until June 30th. The station will be on the air to celebrate the 500th anniversary of printing technology in Gdansk. QSL via SP2BIK.

SPDX CONTEST REMINDER. Zygi, SP5ELA, The President of Warsaw University of Technology RC (SP5PBE), would like to inform/remind OPDX readers and contesters that the 1998 SPDX Contest will be held on April 4-5th. Entries can be all modes or single mode CW/SSB. The SPDX Club of PZK has the honor to invite the radio amateurs from all over the world to participate in the SPDX Contest. The object of the contest is to establish as many contacts as possible between radio amateurs around the world and radio amateurs in Poland. For more information, the following E-mail and URL addresses were provided:
Rules: http://www.sp5pbe.waw.pl/SPDXC/SPDXC_Rules.html
Instructions: http://www.sp5pbe.waw.pl/SPDXC/spdxcI_WW.html

E-Mail Logs: spdxc-logs@writeme.com

SU8, EGYPT (Special Event). Hossam, SU1HM, reports that for the first time ever, amateur radio activity will take place in the ancient Egyptian city of Luxor during the period of March 29th and April 4th. The event is organized by the members of ERAA and the special callsign SU8LXR was assigned for this occasion. Operators Ezzat/SU1ER, Ahmed/SU1AH, Said/SU1SK, Sayed/SU1SA, Hisham/SU1HB and Hossam/SU1HM will also be using their own callsigns/8 and the ERAA's club station will sign SU0ERA/8. Look for SU8LXR on 20 meters (14220 kHz). Activity on other bands/modes will be announced on the above QRG.

TM0, OLERON ISLAND. Jean Claude, F5LEJ, will be active from this French island as TM0DX from August 1-15th.

V63, MICRONESIA (New IOTA). Lew, N6VV, announces that an operation from Mokil Atoll is scheduled for June 1-7th. This will be a new IOTA island plus the first time an operation will take place from Mokil Atoll. Mokil Atoll is located in the State of Pohnpei (IOTA letter d.) in the Federated States of Micronesia (V63). Before the activity on Mokil Atoll, the team of Mike/NG7S, Lew/N6VV and Dan/W7DR will be active from the former German Colonial City "Kolonia", Pohnpei Micronesia (IOTA OC-010), May 24-31st. The team during this time will also operate in the CQ WPX CW Contest (Multi-Op) as V63VV. Lew, N6VV, has received the callsign V63VV. Dan and Mike will also be receiving V63 callsigns. N6VV, W7DR and NG7S have already received the permission to visit the remote Micronesian island, Mokil Atoll. Callsigns to be used on Mokil are V63VV/p and the other assigned callsigns by Dan and Mike. Their equipment list includes: Yaesu FT-1000MP, FinnFet FF-1001 Solid State KW amplifer, Force/12 C3S Yagi, Monoband GP Verticals for 40,20,15 meters, R-7000 Vertical and wires for 80 and 160 meters. QSLs for V63VV go to N6VV (CBA or Bureau). The V63 callsigns for W7DR and NG7S will go to their home callsigns. For more information contact Lew, N6VV at: E-mail - lew@book.net, home phone +1.925.945.6413 or fax +1.925.944.4989

XV7, VIETNAM. Right before going to print, OPDX received the following from Rolf, SM5MX. He reports that he is now in Hanoi, Vietnam, again, where he will activate his dormant callsign XV7SW from the end of March until the middle of May. As this is a private visit and Rolf is travelling light, he is only bringing an IC-706 and a 5-band vertical for 80-10

meters. Hence, no QRO, no beams and no Top Band this time. Luckily though, upon arrival, Rolf was invited to work from the QTH of fellow Sweden Torsten (XV7TH), so Rolf is now active with a TH-5 triband Yagi; 80 and 40 meters may be activated later with the vertical. Because of the rules in Vietnam, he is restricted to operation on certain fixed frequencies only. The designated frequencies for XV7SW are: 3506, 7007, 14016, 14021, 21016, 21019, 28016 and 28019 kHz. Rolf will concentrate on CW as usual but may operate some SSB occasionally on 7086, 14243, 14249, 21421, 21427 and 28661 kHz. Since operation hours will be irregular, XV7SW cannot handle any skeds. QSL via his home call SM5MX, either via the bureau or direct to: Rolf T. Salme, SM5MX, Korpstigen 5 B, SE - 135 53 Tyreso, SWEDEN. He will handle all incoming cards upon his return to Sweden in May. While in Southeast Asia, Rolf is planning a DXpedition to another country. More information later, KYFC.
Also, just a quick reminder that Steve/K2WE/3W6WE and Les/W2LK/3W6LK are still active with their own 3W callsigns until March 31st (refer to OPDX.347). Their activity will probably continue (not sure how long) but under the Kasati Ham Club callsign 3W6KA.

ZK2, NIUE. Look for Frank, DL7FT, to be active until about April 12th as ZK2FT. His activity recently has been mainly on SSB 20-10 meters. QSL via his home call.

ZV3, MARINHEIROS ISLAND (BRAZIL). PY3ACC and PY3CKO will activate this Brazilian (DIB 49, not IOTA) April 17-19th, ZV3A and ZV3C, respectively. Activity will be on 40 and 20 meters CW/SSB. QSL via bureau or direct to: Alberto V. Christensen, R. Irm&#65533;o Jos&#65533; Ot&#65533;o 170/1302, 90035-060, Porto Alegre (RS), Brazil.

Hi Paul, Rather than focusing on one single freq'y, why not explore the thousands of other MF/HF frequencies? We're almost 700,000 strong here in the U.S. and the vast majority of us will treat you like a brother ham. We'll open our homes to you if you ever come to visit. We'll send you any gear that might not be available in your home country. And just to show that us Yanks are nice guys, if your country is ever in need, we'll respond immediately, offering any and all assistance that might be necessary, and we won't hold your remark ("Hope you all get well WERY soon") against you!

73 from Hawaii,
Jeff KH2PZ / KH6

946. 3rd party qsl question

Newsgroup: rec.radio.amateur.dx
Date: 1998-03-30 00:00:00 UTC
From: Casey Bahr <NOSPAMcasey@foreign-interests.com>
Message-ID: <351FE369.8B9@foreign-interests.com>
Source record: 29814

As you will be able to tell from this question, I'm still
a bit green on the DXing scene. ;)

Was told by an Argentinian op to QSL via another Argentinian
call. Trouble is, I can't readily find a mailing address for
either. If I then choose to QSL via the buro, what is the best
method from that point?

- QSL via buro directly to the station I worked?
- QSL via buro to the 3rd party (presumably a QSL manager)? If so,
how best to address the card or envelope to make sure the buro
understands what's happening? I mean, is there a well-used
convention for this?

Perhaps I'm just not looking in the right place(s) for the
QSL manager address. What is the best source for such an
address other than the on-line callsign databases? (If I remember
correctly the via call was LU8MMF).

tnx es 73,

Casey, KS7J

Hello All!

During the CQ WPX contest this past weekend I worked a
station with a S43 prefix. To what country does this
prefix belong? I can't find it in any of my DX references.

Thanks in advance for your help,

I was away for the weekend and have not spoken to those who told me, but a member of the DXAC has already spotted intervening rocks that would negate the seperation qualification of the St Cruz Islands as a new DXCC country. This is likely to create a very large debate.

FR5DX is well known. He has a reputation for sending out a couple
teaser qsl cards just before the contests. The vast majority never get
one. sadly.
I worked him once but, on advice of others, didn't qsl.
Recently I worked another station on Reunion. I sent my qsl via France,
and perhaps I will get a reply.

If you need Reunion for an All Time New One, get on CW and work FR5DD or
FR5DN. Both of those fine gentlemen are easy to get cards from.

I like the MFJ-418 ($79.95, there are cheaper models). It does
everything that the computer morse trainers do but is portable.
This particular model has LCD for reviewing.

I'm considering purchasing a Sony 2010 for MW DXing. Outside of the ease of digital tuning, can I expect any significant improvement in sensitivity and/or selectivity? (Also, I use a Select-a-Tenna with the SR III and would plan to use it with the 2010 -- in case that helps with the answer)

Thanks in advance for your help

After sending a couple of cards to CBA and receiving no reply after a year or so I found advice on some newsgroup (might have been this one but I don't remember) to add "Via France" to the address. Otherwise, it was said, the card would take the most direct route through Africa and be highly subject to pilferage. I tried it and got a return in only a few weeks. I can't guarantee it, but its worth trying. (But I think the French PO Box given earlier would be a better choice.)

I've sent two QSLs with IRCs direct to RU1ZC but so far no reply for
a contact in the middle of last year. Maybe the mail is being tampered with,
or perhaps the logs haven't arrived back. Anyway the third QSL went via the
Buro.

Thought the following might be of interest to hams reading list traffic. Do not send comments to me as I am just forwarding this on from a smaller maritime list:

Thanks & 73

--------- Begin forwarded message ----------
Hello Everyone,
I have just got this news item from the Net. Has anybody out there heard anything , or got any comments or info, on this Intruder ?

"I have just found out about a French HF radar that is located on the south coast of Puerto Rico that will be operating from March 8th to April 8th on 7.2, 14.2, and 21.3 MHz. They are working informally with a NASA rocket program in Puerto Rico and tried to get the FCC to give them some type of license for this operation. Apparently the State Department was involved as well and they decided to turn it all over to the FCC and NASA. The FCC has said that it cannot give any license for any such operations for NASA or the French to use Amateur bands for the specified transmissions and period of operations. It did grant an informal authorization to proceed on a non-interference basis which means that if an incident of interference occurs, the French group must shut down their operations immediately. I thought you should all know about this since the WPX contest is coming up this weekend and QRM is bad enough without having any extra signals of unknown origin on the bands. The French radar is located at Ft. Allen, Puerto Rico at longitude 18N and latitude 66.5W. It will use radar pulses of 100-200 uS with an interpulse period of 1-2 mS. It will use arrays of stacked yagis which will be beaming 12 degrees west of north (pretty close to right at the US east coast) and a power of 300 watts.

The Point-of-Contact for interference reporting is Mr. Henry Schuett at 216-433-5545 and email at hschuett@lerc.nasa.gov or Felipe (no last name given) at 757-824-1623 and no Email given.

They are then supposed to contact the French and tell them to shut down their operations.

I have not heard them yet myself but another ham in Puerto Rico did hear them we think and independently reported interference to the Navy Communications Direction-Finding site at Sabana Seca, Puerto Rico. He did not know about this operation at the time he heard them and reported them.

It is hoped that nobody will hear them much, but just in case, it looks like the ham spectrum is being protected and the hams have some actions than can be taken.

73 Jim WA3FET/KP4 at Arecibo, Puerto Rico "

A later posting says :-

" I have worked with Hank Schuett for a number of years. He is the NASA
HF RF
Spectrum Manager, and a REAL GOOD GUY. He is also a ham, and will take care of the amateur interests to the greatest degree possible.

My $.02 worth...

I have been offered a LUNAR 16 el log-periodic antenna 6.3-30 MHZ.

Problem is that there are no documentation to that, e.g how to feed
properly and how to tune/terminate.

Can anyone help me to find addresses, documents or so...

979. Re: Old version of NA - available free ????

Newsgroup: rec.radio.amateur.dx
Date: 1998-04-01 00:00:00 UTC
From: W2CE <W2CE@prodigy.net>
Message-ID: <35224E51.5C52@prodigy.net>
Source record: 29946

I have loaded to the AOL Radio Communications Forum a file I call CT1997. It is a copy of the last shareware version of CT 6.26 with current country files as indicated by the year.

I have not uploaded it, but I also have a copy of NA version 4.23 which was the last shareware version of NA also updated with current country data.

I have used NA as my main contest logging program for several years. I once asked Dave if the old original version 7.10 disks I had could be posted but he declined as he would not want people to have problems, nor accept support requests nonsubscribers. That is a reasonable consideration for him.

NA version 9.26 seems to have a problem on my new computer using Windows 95. Dave was not able to duplicate the problem. It did work fine on my old 386 PC and on my 386 Epson notebook so the problem is mine NOT the programs.

I am using CT version 8.35 and have not seen any problems using it under Windows 95

Got a response from Bob, VK4MR, saying after sending out quite a few they have had a break, but will be resuming sending next week. So it sounds promising. Obviously its a major job. I certainly won't complain, and I don't want to add to their burden by mailing duplicates to them, so now Ill wait in anticipation.

----------I am also green in the area of DX QSL'ng but I can address some of your questions.

If you have the QSL manager (the "other station you were told about) then the ARRL Buro advises to send it to that station.

Have you tried Buckmaster web page yet. It has some foreign calls but by no means all.

I still need to find more DX call look up sources myself and would like to hear what advice you get.

Hi Marc,

I only got one other response, which boiled down said to add
"via LU8MFF" (the qsl manager I was given) to the card and send
it to the Argentinian buro. So, that is what I will probably do.
Fortunately, Argentina has been pretty easy to work for me, so
I'm sure one will come through.

I don't believe in about 10 lookups that I have ever found an
Argentinian op's address in Buckmaster, though I've found many other
DX ops there. I've used a few other databases with no luck either.

BTW, you can find a list of foreign buros at:
http://www.iaru.org/iaruqsl.html

Personally, I like to use the SASE method of QSLing, but that is
not always practical if you can't find the op's address. I haven't
tried that yet by sending via a buro.

I wish you good DX and 73,

Casey, KS7J

987. Re: List of the rec.radio newsgroups (brief)

Newsgroup: rec.radio.amateur.dx
Date: 1998-04-01 00:00:00 UTC
From: jeffreyh@Hawaii.Edu
Message-ID: <6fs9pj$76p@news.Hawaii.Edu>
Source record: 29954
Cross-posted to: rec.radio.amateur.antenna,rec.radio.amateur.boatanchors,rec.radio.amateur.dx,rec.radio.amateur.equipment

In an effort help ensure a poster's article reaches the appropriate audience, below is a list of the rec.radio newsgroups. In most cases, a group's name will explain its purpose. Cross-posting should rarely be necessary.

rec.radio.broadcasting (devoted to the broadcast industry; moderated)
rec.radio.cb
rec.radio.info (periodic informational bulletins; moderated)
rec.radio.scanner
rec.radio.shortwave
rec.radio.swap (for buying, selling, and trading; not a discussion group)

rec.radio.amateur.antenna
rec.radio.amateur.boatanchors (tube-type communications equipment)
rec.radio.amateur.digital.misc (packet, pactor and other digital modes)
rec.radio.amateur.dx (long-distance amateur communications)
rec.radio.amateur.equipment (questions, comments regarding commercially-built amateur gear; not for buying/selling)
rec.radio.amateur.homebrew (devoted to home-building ham gear)
rec.radio.amateur.policy (issues include code, restructuring, local restrictions in conflict with FCC R&R)
rec.radio.amateur.space (satellites, meteor scatter, EME)
rec.radio.amateur.misc (any topic not covered in the above groups)

(At least two other English language radio hierarchies exist, prefixed with "uk" (United Kingdom), and "aus" (Australia), in place of "rec.")

Again, cross-posting should rarely be necessary. Many times, a long-running thread results from a single cross-posted article, and the contents of such a thread drift further and further away from being "on-topic" in the various NGs that receive each and every followup.

For more detailed information, see "Guide to the Rec.radio Newsgroups" posted on the 15th of each month.

Jeffrey Herman (KH2PZ / KH6)

QST de W1AW
DX Bulletin 13 ARLD013
From ARRL Headquarters
Newington CT April 2, 1998
To all radio amateurs

SB DX ARL ARLD013
ARLD013 DX news

This week's bulletin was made possible with information provided by Tedd, KB8NW, the OPDX Bulletin, The 599Rpt, QRZ DX, The Daily DX and Contest Corral from QST. Thanks to all.

MAURITIUS, 3B8. Mart, DL6UAA, is QRV as 3B8/DL6UAA, using CW and SSB. His length of stay is unknown. QSL to home call.

TOGO, 5V. F5CPU is QRV as 5V7BM until the end of 1999. QSL via operator's instructions.

SOLOMON ISLANDS, H4. Jim, VK9NS, is QRV from Pigeon Island, IOTA OC-065 as H40AB. This may count as Temotu Islands, a possibly new DXCC entity. He will be active on 40 to 10 meters. QSL to home call. Look also for H40AA to be QRV until at least April 10. QSL via OH2BN.

SAN ANDRES AND PROVIDENCIA ISLANDS, HK0. Nel, HK0HEU, is QRV using SSB. QSL via HK0FBF.

MONGOLIA, JT. Terry, VK4MZ, is QRV as JT1FCO, and has been found on 40, 20 and 15 meters using SSB. QSL to home call.

SVALBARD, JW. Rag, OZ8RO, will be QRV as JW5HE until April 9. He will focus primarily on 30, 17 and possibly 12 meters. QSL to home call.

NORTHERN MARIANA ISLANDS, KH0. Zorro, JH1AJT, is QRV using the callsign KG6SL, using mainly SSB on 40 to 10 meters. QSL to home call.

POLAND, SP. Look for Special Event Station SN0JG to be QRV until June 30 to celebrate the 500th anniversary in printing technology in Gdansk. QSL via SP2BIK.

EGYPT, SU. Look for team members SU1ER, SU1AH, SU1SK, SU1SA, SU1HB and SU1HM to sign SU0ERA/8 as well as homecalls/8 until April 4. QSL via operator's instructions.

COSTA RICA, TI. Jim, N9IUO, is QRV as TI2IDX on all bands using CW and SSB until April 5. QSL via WA9BXB.

CHAGOS ISLANDS, VQ9. Jim, NS1L, is QRV as VQ9ZZ. His length of stay is unknown at this time. QSL to home call.

CAMBODIA, XU. Hiro, JA2EZD, is QRV until April 5 as XUX0 from Koh Poah Island. QSL via 7L1MFS.

TRISTAN DA CUNHA, ZD9. Ian is QRV as ZD9IL, and has been found on 28482 khz around 1300z. QSL via ZS5BBO.

NIUE, ZK2. Frank, DL7FT, is QRV as ZK2FT until April 12, using SSB on 20 and 17 meters. QSL to home call.

THIS WEEKEND ON THE RADIO. The European EME, EA RTTY, Elettra Marconi and SP DX Contests will fill up your contest weekend. Please see April QST, page 102 for details.

Fill out the card just as you worked the station, Then add " VIA CALL" and
include that in your package of cards to the bureau sorted by the manager's
callsign. I Usually do the note in heavy bold on the card.

Hello Damien:

Anytime you send a QSL to a manager ask if they have any extra IRC'S. I am usually able to get them for about half price. $.60 here.

Hate to say it , but amateur radio, as we know it will be DEAD in less
than twenty years. It is, for the most part, a retired citizen's pass
time with an occasional influx of agressive CON Testers on weekends.

Most of 75 meters is taken up with low I.Q. ignoramouses spouting
diatribes on religion and others who are just plain offensive and
vulgar.

Young folks have cell-U-lars, Inter-Net to keep them quite happy.
Who-the-heck wants to be a HAM anymore?

Who gives a flyin- F about talking to Europe with 30 to 40 percent
of the conversation eaten by static? Technology has passed amateur radio
right on by.

And for the record, with the FCC so lax on enforcement.. a lot of
stuff is now bootleg not to mention the huge increases in high pwer
RTTY and broadcasting intruding into amateur spectrum.

Its- bye-bye amateur radio.. and nothing can stop the trend. IMHO

W1IT and somewhat saddened ham-op

Where would the Bucks ever come from to bring satellites into the
service? 3D still hasn't made it after.. how many years of R & D.

Frankly, sounds like an attitude problem Gary. With about
400 QSOs under my belt (admittedly not very many) I sure don't
understand what you're talking about. I'm mostly CW, so perhaps
that's where the difference lies, but by far I only encounter
courtesy and good times on the HF bands. I'd say the mean age
of the ops I work are about my age, mid-40's, I work 'em
as young as 12, as old as 95.

For a few hundred bux and some wire I get a lot of thrill working
on different bands under different propagation conditions static
or no. Sometimes working that QRP station across the country who's
using a 2 W radio is just as much fun as working 100 W or more
stations in NZ, Brazil, or even Japan. Now that I have a quad up
the static is down, the sigs are stronger both ways.

My point is I've just scratched the surface of ham radio, and with
minimal investment and relatively low technology am having a blast.
I suggest to you that you are tired of the hobby because you are
no longer challenging yourself to explore more. The guys dropping
out from VHF are predominantly those who aren't even challenging
themselves enough to pass a measly 5 WPM multiple-choice code test
so they can enjoy the full flavor of ham radio on the HF bands.

I'm sure not trying to start a no-code/know-code thread here, just
trying to point out that the hobby is what you make of it, just
like the rest of life. If the hobby "dies" it will not be because
there isn't enough to explore and enjoy in it.

'nuff said.

Ham radio is people, and you're going to run into a few losers
here and there. On the internet chat rooms you're not going
to find much better. Actually, I think it's much worse on
the internet than it is on ham radio.

Hi Gary.I really doubt that we are going to loose 770,000 U.S. amateurs in the next 20 years. And what about world wide? Last count was something like 3 million wasn't it? (Hi Hi)

> It is, for the most part, a retired citizen's pass
> time with an occasional influx of agressive CON Testers on weekends.

I hear activity on both hf and vhf every day from folks of all walks of life and of all ages. I don't know about your area but there are a couple of repeaters here that have quite a few active younger hams. In fact I would say there are more active young hams in the area now then when I first got my ticket in 1962.

And what is wrong with retired people passing time with ham radio. To me that is something to look forward to. Speaking of contest operators, were you on last weekend? It was wall to wall hams on just about every band. Heck I find it fun to work the contests for a bit just to see what contacts I can make running 100 watts to a dipole. But, I am glad we don't have to put up with that kind of crowding every weekend.

> Most of 75 meters is taken up with low I.Q. ignoramouses spouting
> diatribes on religion and others who are just plain offensive and
> vulgar.
>

There were operators just like them over 35 years ago when I got my novice ticket. Don't just sit and listen to them. Get on the air and start a few QSOs that show the positive side of the hobby. Get involved with organizations that are pushing for rule enforcement to get the illegal operators off of the air.

> Young folks have cell-U-lars, Inter-Net to keep them quite happy.
> Who-the-heck wants to be a HAM anymore?

From the number of young folks at the VE exam I was at a few weeks ago it seems like a fair number want to be hams. There were even young people taking the dreaded code test. Don't just fret about it. Look into being an Elmer to help bring new hams into the ranks.

> Who gives a flyin- F about talking to Europe with 30 to 40 percent
> of the conversation eaten by static?

I don't know about flying letters of the alphabet, but talking to Europe with 30 to 40 percent static beats the heck out of sending or receiving e-mail from Europe any day. What the heck fun would hf be if every contact was 5 by and 20 over S 9. It would be boring, and have about as much excitement and challenge as channel surfing with your cable tv.

> Technology has passed amateur radio
> right on by.

Maybe you could elaborate on that one for me. I have a new hf radio with DSP features that go pretty far on getting rid of a lot of that static problem. I have been able to pull stations that are below the noise level. This radio also has a DSP beat cancel feature that can be used to get rid of a carrier from someone tuning up or one of them wonderful (not) 40 meter broadcast stations.

Check out the new CCD camera set up that just came out. It can be used with an ht to send video stills with very little set up time. How about High Speed CW meteor scatter where you boost the speed of a cw message up to 1200 wpm or more and send it as a "ping" to to be captured by a receiving station on a computer or tape unit to be slowed back down to something you can decode. Fractional second QSOs. NEAT STUFF.

The old modes have been enhanced by applications of new technology and new modes are continuing to emerge as technology changes.

> And for the record, with the FCC so lax on enforcement.

Once again, don't just sit there and type. Get involved with efforts of the organizations that are working to get the FCC to do more enforcement.

> a lot of
> stuff is now bootleg

Get on the air and you can talk right over the bootleggers....

> not to mention the huge increases in high pwer
> RTTY and broadcasting intruding into amateur spectrum.

The broadcasters have always been there. But you can use some of the new technology to talk around them.

> Its- bye-bye amateur radio..

Maybe for you it is Gary and that is sad. Yes, it is sometimes discouraging to listen to some of the garbage on the air and to read about it on the newsgroups. It gets to all of us at times. From the sounds of it you have been a ham for a long time. If so, you know what a rewarding hobby this can be. It would be a shame to quit something that has given you years of enjoyment.

> and nothing can stop the trend. IMHO

Yes Gary a lot of things can stop the trend. You and me are just two of those things.

> W1IT and somewhat saddened ham-op

> Where would the Bucks ever come from to bring satellites into the
> service? 3D still hasn't made it after.. how many years of R & D.

There are birds up there now we can work, and even though 3D has been set back a couple of times it is still alive and kicking.
Best of 73 Gary

From: FRSH@PI.NET
Message-ID: <3524e061.1098929@news.wxs.nl>
Source record: 29675

Hi there, some news on our upcomming SW transmissions:

Next Sunday April 5th FRS-Holland will hit the airwaves with a 4+ hour broadcast on 5815 kHz and hopefully also on 7315 or 7333 kHz.
In the mean time both txs have been tested, especially the modulation quality has been looked after. The results are very promising!
Official trms start at 08.52 UTC but we are hoping to be on air at approx. 07.30 UTC. We can give no guarantee that 41 is also on but with a little luck....

Most likely there will be short tests on Saturday afternoon after the aerials have been erected. We also aim at putting out one hour of testing on or close to 5815 on Sat evening at 22.00 UTC which is 00.00 CEST on Sunday April 5th.

Reception reports are highly appreciated, it's the first time we are using our equipment on 51 metres making us very curious how results will be.

Remember: Email reports are welcomed and consequently replied via the Internet. Reports via POBox 2727 in 6049 ZG Herten are replied with a QSL, info and a sticker provided sufficient return postage is enclosed: two US dollars, 2 IRC's, 3 German one Mark or 3 Dutch one guilder stamps.

All the best and good DXing next Sunday.

73's, FRSH crew

I gather he is doing better as he returned a card to me 2 weeks ago that needed to go to a different manager. Fast turnaround (about 1 week).

Check out the new rules, Bob. Intervening *rocks* don't matter.
Intervening *islands* are what matters, and according to the new rules,
islands have to have at least 100 meters straight-line of land above
water at high tide.

Mr. Stafford, I respect your position as President of the ARRL but frankly based on what is written below, cut the crap. I have never been involved in any VE session in which there was any question of "irregularity." I have already sent my letter to several newspapers (and a few have said they will or have published) but many more will follow. If I am reinstated, I will stop.

> than twenty years.

Heehee - when I got licensed 22 years ago, folks such as yourself were saying the same thing. Who'd guess that the number of licensees would triple in that short time span? My old radio history books quote amateurs crying the same doom and gloom back in the 1920s.

> It is, for the most part, a retired citizen's pass
> time

Not here in Hawaii. Go to any meeting and you'll see folks of all ages.

>with an occasional influx of agressive CON Testers on weekends.

The bands are open for business 168 hours per week. The contest folks are on less than 15% of that time. But don't forget, those guys are pushing their very efficient stations and themselves to the limit each weekend - very good training for emergency communicators.

> Most of 75 meters is taken up with low I.Q. ignoramouses spouting
> diatribes on religion and others who are just plain offensive and
> vulgar.

Try 80 CW. Try 160 or 30. Or get on 75 yourself and send "CQ for a chess game" or CQ for an astronomy discussion" or whatever your interests are. The QSOs are only as interesting as *you* make them.

> Young folks have cell-U-lars, Inter-Net to keep them quite happy.
> Who-the-heck wants to be a HAM anymore?

To get the answer, go to the testing sessions as ask the young folks who show up why they want to be amateurs.

> Who gives a flyin- F about talking to Europe with 30 to 40 percent
> of the conversation eaten by static? Technology has passed amateur radio
> right on by.

You obviously don't build your own gear, for if you did, you'd already know the answer. When I can get on the air using gear I've slapped together myself and work someone thousands of miles away, the reward is greater than words can describe.

> Its- bye-bye amateur radio.. and nothing can stop the trend. IMHO

I thought I read that same gloomy prediction in QST some 30 years ago...

Enjoy the weekend!

For me the lost of HF operator is due to the market price of equipement (very expensive) and the lost of building transmiter tradition.

I have search for component to build my own receiver and transmiter and the price of individual part is exorbiting. Amateur radio is my hobby not my principal source of income.

I hope for more resonable market. There an principle in commerce. Don't make your profit on a single sale, target on the volume.

I think that's totally incorect. When I was a Novice is 1957, I
worked odd jobs all summer to be able to buy a used Johnson
transmitter (xtal controled, CW only) for $60. I already had
a receiver. Today you can find used HF transceivers, all mode,
for $500-$600. In today's dollars, that's not really any
dofferent than years ago and may actually take less work
effort to save the money.

>I have search for component to build my own receiver and transmiter and the
>price of individual part is exorbiting. Amateur radio is my hobby not my

But you must face facts. Amateur radio requires amateur
equipment and you will have to spend some money to
buy your own.

Last weekend in WPX, I worked someone
I logged as 9J2A. (And I congratulated
myself for working my first 9J.) This
was around 1200 UTC on Saturday.

Tracking down QSL addresses for the new
ones, though, I'm NOT finding any references
to 9J2A. I'm afraid it's a busted call:
9J2Ax, maybe, or possibly one of the many
9A's who've been so active lately.

So--anybody work any 9J's in the contest?
In particular, did anybody work a 9J2A?

Thanks!

>make your profit on a single sale, target on the volume.

Commercially built amateur equipment is cheaper today than it has ever been. In 1958, it cost the average worker 1,000 manhours to earn the price of a KWM-2. Today, the average worker can have a FT1000MP for less than 150 manhours labor. Inflation has made prices naively look higher, but when you figure them in terms of manhours of labor, they're the lowest they've ever been.

And the retail margin on amateur equipment is typically no more than 6%. That's lower than most any other retail good except food. Most retail goods have a markup of 50% to 100%, the garment industry markup is higher than that. The only ham dealers who are staying in business are those who can do very large volumes of business. They aren't trying to make a killing on the sale of a single unit. They are trying to survive by pushing enough units out the door to cover their overhead.

Building equipment is also cheaper today than ever before. VLSI chips with capabilities not even dreamed of a few years ago sell for dollar prices similar to those of a single function vacuum tube of years gone by yet encompass entire radio subsystems in a single chip. And that's without even factoring in inflation of the dollar. Only those intent on building using yesterday's technologies are at a handicap. Those sorts of obsolete parts are becoming scarce and expensive. But those building with today's technologies are producing better equipment at lower cost than ever before.

Why would anyone operate QRP in an emergency? The
only thing that would result on QRP would be someone who had
no other options. The TRUE emergency operations do
NOT just pop up without preplaned response activity...and
that involves far more than a QRP operation.

If I have misread Walt's comment, I await what the point
relative to QRP operation is then.

Here, jamming is forcing emergency stuff to frequencies way above
the crowd on 2/440. The problem with CW, really, is that not many
people can really get 100% copy. Personally, I think jamming will
push voice to digital spread spectrum. In the meantime, I think
the best solution is big beams and big amps. I don't even
bother with 440 until I can get, like 100Watts+ going. For
some reason, Berkeley seems to have more repeater problems than
anywhere else in the bay area. 440 seems worse than 2 meters
here. Not sure why.

Yeah, but the prepared emergency operator will have a couple of
spare batteries for his HT already charged and ready to go. Most
of the communications needs an amateur has to fill in an emergency
or disaster situation are local and tactical in nature. For those few
which aren't, he generally has vehicle power available, which means
he can run at least 100 watts, and that's plenty for nearly any
situation.

And the primary skills he needs are knowing how to follow net
procedures, how to shut up and listen, and how to *cooperate*
with other amateurs to get the messages passed. Rather than
trying to dig out the weak signal, a smart emergency operator
asks for a relay to ensure rapid and accurate message handling.
And the smart operator queues up and gets his traffic listed so it
can be handled in an orderly prioritized fashion. He isn't competitive,
he's a cooperative and disciplined part of a communications team.

Instead of complaining about the hobby changing we could try to help to keep modes going. I help people all the time to upgrade their CW. Stop complaining and do something to help under licensed hams upgrade. It will take 10 years at a minimum to do away with CW so lets get people interested in the roots of the hobby..

To say nothing of the possibility that the only equipment available
could be QRP gear. I sometimes travel with only QRP gear. Should I take
along the KW just on the chance I might need it?
That you fail to see these possibilities only shows how restricted you
have forced your thinking to become as Code Phobics..

That anyone who really cares about being prepared for an
emergency would only carry a QRP rig ith them is amazing.
You expect the rest of the ham population to be there ready
to work your QRP station if something happens. That is
not likly at all. Every emergency that involves hams has
consistently relied on hams with VHF capability...not QRP
operations. Even those few emergencies that involved
HF communications, they have all involved typical
power levels and regular SSB transcievers/stations...NOT QRP.

Dick thinks no one can see a QRP possibility. Sure
there MIGHT be one person, but that QRP operator will
not be an integral part of ongoing emergency commuications.
There are much better equiped hams that will and do
meet the challenges.

If VHF is used, then you need that big amp and beam to blast in
over the jammers. Nothing would be a bigger jammer magnet
than someone doing something useful on ham radio. If they're
using low power, they'd be a jammer magnet doubly so. If you're
not 'their kind' figure it a sure thing. (Sadly,
not completely a joke.)

Actually, I'm hoping that 150 watts and 5el beams will make
me mostly jammer proof on 2/440 for any nearby repeaters.
(Does anyone even make an amp in the 300-1kw watt range for 440?)

Walt, focus on my last line above, "...very good training for
emergency communicators", rather than on the gear they're running.
The "training" they impose upon themselves weekend after weekend, their
traffic-handling skills, and intimate knowledge of propagation,
international procedures, and operating techniques makes them
the exceptional choice for disaster communicators.

Now, regarding the stations they run, many have a standby generator.
You'll find they have the most efficient and robust equipment
installations, from radios, operating position, lead-in, to antenna,
as any ham shack, for running such a staion is the only way to seriously
compete.

These exceptional operators and the rock-solid stations they operate are
whom your community turns to when disaster strikes, for these communica-
tors voluntarily "train" themselves weekend after weekend, in the most
grueling mental and physical activity known to the amateur radio service.
No other operators are better prepared for the rigors of providing
emergency communications.

>The skills required are somewhat different ..... QRP, simple lash-up
>antennas and very limited battery power are closer to the mark.

After the disaster strikes, I believe my community would rather rely
on someone able to run a bit more than 5W. (I'll be running about 50
for Field Day into a wire beam strung between coconut trees.)

1050. H40AA UPDATE BULLETIN 05

Newsgroup: rec.radio.amateur.dx
Date: 1998-04-05 00:00:00 UTC
From: Jarmo J Jaakola <oh2bn@clinet.fi>
Message-ID: <6g96r9$84a$1@ve7tcp.ampr.org>
Source record: 29717

[Forwarded via the DXpedition Announcements mailing list. See
http://ve7tcp.ampr.org/DX/Expeditions/ for details.]

H40AA UPDATE
BULLETIN 05

The H40AA operation from Temotu commenced on April 1 as planned,
with initial spots on Stateside DX PacketClusters monitored in
Europe reporting busy traffic within minutes of first contacts.
Ever since, pileups have been tremendous, indicative of extensive
worldwide interest in what will be a new DXCC entity, pending
approval of the new country application.

Assuming that propagation conditions remain at least at current
levels, everyone is certain to get a fair chance to put this one
into their logs.

In a rather unprecedented development, H40AA will have two stations
simultaneously on 15 meters SSB throughout this weekend. One will be
on 21195 kHz and the other on 21295 kHz. They will cover the entire
weekend this way through Sunday night. This will be a major effort
to work as many of the Deserving as possible over the weekend.

WARC band enthusiasts, please note: the 18 MHz yagi will go up
tomorrow, Saturday.

The fourth complete station (FT1000MP + Alpha) comes on-line tomorrow
with the arrival of Olli, OH0XX. This will allow H40AA to have four
full stations active 24 hours a day for the rest of the DXpedition.
Currently, there are three stations running round-the-clock.

Remember, H44RY and H44DX QSOs count for Solomon Islands credit,
while H40AA QSOs will count for the new Temotu Islands DXCC entity.

QSL H44RY via OH1RY
H44DX and H40AA via OH2BN

Also, the H40AA DXpedition Web Site is now available at
the following URL:

http://www.iglou.com/n4gn/h40aa/

Good luck to everyone in the pileups!

1051. MOSLEY PRO-67A FOR SALE

Newsgroup: rec.radio.amateur.dx
Date: 1998-04-05 00:00:00 UTC
From: News groups <tomcom@home.com>
Message-ID: <6g9b35$k5h$1@ha2.rdc1.sdca.home.com>
Source record: 29718

ANTENNA FOR SALE at greatly reduced price.

MOSLEY PRO-67A

This is a biggie for those of you who might be interested in hi forward gain and good front/back gain ratios and may want to run high power.

6 bands: 40,17,20,15,12, and 10 meter bands

40 mtrs: 2 el, gain=4.9 db f/b=12 db
20 mtrs: 3 el, gain=8.5 db, f/b=20 db
17 mtrs: 3 el, gain=8.5 db, f/b=23 db
15 mtrs: 3 el, gain=8.5 db, f/b=20 db
12 mtrs: 3 el, gain=8.3 db, f/b=15 db
10 mtrs: 4 el, gain=9.4 db, f/b=20 db

Power rating for SSB is 5.0 KW
VSWR at band center is less than 1.6 to 1

Antenna has 7 elements
Boom length is 24 feet. Turning radius 24 feet
Boom and all elements are stainless steel. No aluminum.
Excellent condition.

Currently antenna is on 10 foot tower on my roof (single story house) and is available for inspection and demonstration.

I need help with removal and will sacrifice at $250. (new price is now about $1400)
Antenna is UPSable but would prefer not to ship. (ship weight about 120 lb.)
Location is San Diego California
Must sell. Contact

Tom, KB6VV at 619-448-2527 (leave message) or tomcom@home.com

Ken,
Yeah, I worked 9J2A in the WPX (my ONLY contact, giving me a perfect score of 1!). Anyway, he was a true 5 by 9 in Phoenix, Arizona at 1515Z on the 28th, on a dipole yet. Um-m-m, you think it's legit?

Hate to bring it up, but with the jammers becoming more and more omnipresent on th voice segments of both HFand VHF, CW could be the only mode available that will do the job in the face of all the intentional QRM on voice modes. One doesn't see that stuff on the CW band segments, and even if it did migrate there, good CW operators can operate around or through it much easier than voice modes allow. Even DSP doesn't help eliminate jamming that is also voice. We've already seen a number cases of deliberate jamming of urgent or emergency signals in the past. Look for it to get worse as more and more misfits without any real interest in ham radio, but a very real interest in making trouble for someone, *anyone* handy, migrate to a hobby that has traditionally required determined, serious, deliberate effort to qualify for licenseing, and today does not.

I think that's because Walt is assuming that ALL
contesters are of the survival of the fittest, shout the
loudest mentality. Some certainly are, but there are
many more that do not go to such extremes.

One of the great benefits of voice communications is that
ANYONE an be pressed into service to LISTEN whereas
the ONLY one that can be utilized for listening with CW
is someone that can decode CW. That helps tremendously
in an emergency situation since the use of voice communications thus
allows non-hams to be used for reception to allow the ham
at that location to take a break or just do other things
while there is nothing being communicated or while
other communicatios involving other sites is going on.

>Traffic handling requires the ability to listen - not transmit - for
>long periods, to act without question upon the instructions of a
>duly-appointed net controller, and to pass often-complex messages
>accurately and effectively with a minimum of fuss.

Yet you don't even need to be a ham to do that.
Personally, I'd like to see more focus on emergency
communications and operation in the current written
tests for licensing.

>It seems to me that all those qualities are anathema to today's
>typical contest operator.

I won't comment on the contesters, I suspect many
would have no problem as effective emergency

communicators while others might be useless.

Alas, namecalling begats namecalling. That's the nature of the beast.

>I bet you'll sing a different tune when 6-land crumbles off under the
>ocean and you need help...

Actually, I expect he'll have some nice beachfront property. :-)

(You can't go by the callsign to tell where anyone lives anymore.)

You have a point in that you use what you have in an emergency.
You won't be running to the store to buy what you need, and you
won't be plugging in the soldering iron and building what you need
either. You'll use what you have. But an amateur who is prepared
for emergency communications will have the proper tools for the
job. And that's unlikely to be a QRP HF CW rig.

The reason I say it is unlikely is that one only has to look at the
record of amateur emergency communications in the last couple
of decades. QRP CW has been notable by its absence as an
emergency communications tool of any note. It hasn't played
a role in any major disaster situation involving amateurs.

I've heard of a couple of exceptional circumstances where QRP CW
enthusiasts found themselves lost while backpacking and used
all they'd thought to carry, their QRP CW rig, to attempt to signal
for help. One actually contacted another station (a couple states
away). But a cellphone or a VHF HT would have been better because
it would have allowed them direct access to local help. They didn't
think to bring either, however. They were not properly prepared
for emergency communications in the situation in which they found
themselves. (If either had been in a *very* remote location rather
than in California, a QRP CW rig might even have made sense. But

very very few hams ever find themselves in such extremely remote
situations.)

I have a few shortwave books for sale. Some are out of date but may be
of interest to someone.

1- The Shortwave Listener's Antenna Handbook
Robert J. Traister
$5.00

2- Shortwave Listening Guidebook
Harry L. Helms
$5.00

3- The ARRL Antenna Book - 15th edition

$5.00

4- Shortwave Directory - A Frequency Guide for the 10kHz-30MHz
Spectrum
Bob Grove - Seventh edition

$5.00

5- Passport to World Band Radio
1991 edition
$2.00

5- World Radio TV Handbook
1991 edition
$2.00

6- Talk to the World
Canadian Amateur Radio Licensing Manual
$2.00

or $20 plus shipping for the lot.

All books are in excellent condition, although #5 has some
highlighting.

Please answer via email as I don't monitor these newsgroups
Thanks

Hah!

If 6-land crumbles (and Nevada also crumbles), W6RCA could be
living on beach-front property. Not all 6's live in California.

Have you looked at the Astron switching supplies? (Assuming that
you need 13.8 V). They are available up to 30 A or so, and are
much smaller and lighter than a linear supply of the same output.

Hi Walt, Check out a switching supply. They weigh under 5 U.S. pounds. You can get them with multiple input voltages.

>Hey ! Whats wrong with us old retired guys heating up the air with a
>little rf. Some one got to do it!!
>Larry ac5ez

There's not a thing in the world wrong with it, Larry. The concern is that a majority of us are old guys, and getting older. And that isn't healthy in the long term for the HF amateur service.

We have a demographic problem in the US HF amateur service.
In 1967, the average age of HF licensed US amateurs was 27.
In 1997, the average age of HF licensed US amateurs was 63.

In a demographically stable group, the average age should have increased to 29.4 by 1997 to track the change in the demographic average of the US population as a whole as the baby boomer generation works its way through the general population's demographic, which amounts to an increase in the average age of the general population by 2.4 years over the 30 year span in question.

But the HF amateur age didn't do that. Instead it got much older much quicker. And the only way that can happen is if entry into that subgroup by younger people has slowed dramatically. Our HF population today is mostly middle aged or older. In fact, a fairly large number of those being counted are probably already silent keys due to the 10 year renewal delaying any purging of the records.

Whenever the average age of a demographic subgroup is increasing faster than the average age of its source group, that subgroup is in trouble. It is dying. If the trend is projected into the future, in 20 years over half of HF licensed amateurs will be dead, and they won't be replaced by sufficient numbers to maintain subgroup viability. That's the demographic crisis HF amateur radio is facing.

Note that US amateur radio as a whole has seen a decline in the average age of its members since 1991 from 62.5 to 59.4. That's due almost solely to the increase in numbers of the Tech group, which doesn't have HF privileges, but at an average age of 46.3 is our youngest demographic. So the prospects for amateur radio as a whole are actually looking up for the first time since 1968's Incentive Licensing implementation started things into demographic decline. But the demographics of the HF branch of amateur radio are still sick, and getting sicker.

Some of us believe that the anachronism of the Morse speed requirements for HF access, and the caste system they form, are a major reason for this demographic crisis. (I don't deny that there are other factors as well, such as the perceived, but untrue, high cost of entry, the real problem of HF antenna restrictions, and the perception that amateur radio isn't relevant anymore to the interests of young people.)

If we want HF amateur radio to remain healthy, we need to address this demographic crisis. And we need to do so fairly soon. We have a window of less than 20 years before the problem becomes acute. Our older members won't live to see the impact, but their children will. So we need to ask ourselves whether we want to leave a healthy HF amateur radio as a legacy to our children, and their children, or if we'd rather selfishly defend the status quo since we won't be personally impacted by the future decline and death of HF amateur radio (because we'll be dead too).

Since nearly all of the amateur rigs we might carry with us today
run off 12 VDC, and since nearly every vehicle has a sufficient
source of 12 VDC, carrying a separate power supply with us is
usually unwarranted. Simply hook it up to your rental car at your
destination. (Realize that most Americans simply consider mass
transit as an inconvenient, but sometimes necessary, way to get
to the next automobile.)

Some of those qualities may not be anathema to the contest operator,
at least not to all of them, but contests certainly provide little training for
the emergency communications role, especially the all important
requirement to be able to pass complex messages accurately, rapidly,
and effectively. The real information content of the typical contest exchange
is virtually the null set. (It doesn't have to be that way, but that's the way
current contests are structured.)

63? I know the average age is definetely getting older, but 63 as an AVERAGE age seems a bit off to me. I myself am 34 and have been an active HF op since age 19. I know I'm on the young side, but based on other HF ops I know I'd put the AVERAGE age at closer to 50 or so. I don't have any data myself to "prove" my point, but I'm curious as to what data you referenced to make the point in the first place?

>Thanks for that info! Do you know if they are available for an input
>voltage of 230v 50~ (the European standard)?

All models are switch-selectable to run on 90-132 or 180-264 V, either 50 or 60 Hz at either voltage range. Mine is 15A continuous output, but there are larger ones that do 20 cont/25 intermittent, and 25 cont/30 intermittent.

All are supposed to be sufficiently well filtered for use with HF receivers (i.e. they don't radiate too much EMI) and meet FCC class B. They have current limiting, overvoltage protection, over temperature shutdown. There is a thermostatically-controlled fan that I've never seen come on. The high-current models are available with or without meters.

Far more amazing is the assumption on your part that anyone would deliberately plan a emergency communications system around QRP equipment. Why would anyone do that in curcumstances where more appropriate gear was available?

> You expect the rest of the ham population to be there ready
> to work your QRP station if something happens. That is
> not likly at all. Every emergency that involves hams has
> consistently relied on hams with VHF capability...not QRP
> operations.

This IS amazing......you actually believe that hams PLAN to weather a disaster with nothing more that QRP gear because they just like to work with QRP gear only.. it's almost laughable......

> Even those few emergencies that involved
> HF communications, they have all involved typical
> power levels and regular SSB transcievers/stations...NOT QRP.

Well, yes.....as it surely would be in nearly any circumstances. But, say, I go to visit relatives in central California, by commercial air transport, and elect to toss in my Oak Hills 100A QRP CW rig, simply because it fits neatly and lightly in my suitcase when the Icom and it's power supply will not. Now, I know that central California does indeed have an occasional earthquake, and some have even been known to cause serious disruption... In fact, I know that the expert seisomoligists say there is a "Big One" still to come somewhere in the Golden State. Do I advance-ship my QRO rig out by UPS Next Day Air, just so as to have a *real* emergency capability on hand, just in case? Would you? Would anyone in his right mind?

> Dick thinks no one can see a QRP possibility. Sure
> there MIGHT be one person, but that QRP operator will
> not be an integral part of ongoing emergency commuications.

No, probably not..... but he just might be the first or only person in a disaster area with any communications capability at all....

You Code Phobes just insist on dealing Mother Nature's hand for her don't you?
Don't you know *It's Not Nice To Mess With Mother Nature?*
"She" will bite you in a very unpleasant way in a very sensitive area if you

mess with her too much. And then you can blame it on "Implementations".

> There are much better equiped hams that will and do
> meet the challenges.

Fer damn sure sir! But I guarantee that if I fired up the QRP rig on one of the FISTS frequencies, I would have near-instant contact, whatever the circumstances.

> I disagree, Gary.

As do I. I see no reason to presume that a contester would not know enough about radio to realize that the skills one might use in a contest are different than the skills one might use in an emergency. My neighbor next door is #59 in the stock-car, figure-eight enduro at a local track. He drives quite rationally on the street.

> Further, in addition to the message handling skills shown above, contest

> difficult band conditions.

I can attest to this from my own experience. I have run 10 milliwatts in the CW sweepstakes. A number of these operators were able to dig me out on a very busy band and copy the complicated SS exchange -- to the tune of 54 contacts in 30 sections. These are good operators, who can use those exact skills, if needed.

I suspect that SECs will recruit anyone willing to do the job. They probably have a harder time filling empty slots with willing volunteers than they have trying to weed out the one or two contesters who are not able to adapt to emergency operating practices. :-)

Hello all,
Some days ago I worked with UN7JLQ and he wanted direct QSLing but I can't
find his QSL address...
PSE let me know the QSL info of UN7JLQ.

Thanks in advance.

>and effectively. ...

One wonders just how many distress situations, with lives at stake,
Gary and Walt have heard on the amateurs bands in which they knew
for certain that the participating operators were not contesters.

Since the amateur and maritime services are alike in many ways (most
of our prosigns and procedures come from that service) let's focus
on the operators from that service for a moment. Every six hours,
everyday, decade after decade, a worldwide "pile-up" occurred on
the maritime bands as every ship at sea around the world raced to
contact us and other shore stations in order to pass their time-
sensitive weather observations (WX OBS). These six-hourly pile ups
would make an amateur operator tuck his tail and hide. To outsiders
(such as Gary and Walt) the maritime bands surely sounded like bedlam.
Yet, to those of us who participated in this four-times per day
ITU-sponsored event and who thoroughly understood the mechanics of
of such communications, the situation was very orderly. After only 20
minutes past the start of the OBS hour, all WX had been passed, and the
bands resumed to their normal state for another 5.5 hours.

(Let's pause to allow Walt and Gary time to again consider just how
many distresses they've heard on the amateur bands in which they
knew for certain that the participating operators were not contesters.)

Now these same maritime ops who played in pile-ups, which would cause an
amateur contester to blush, were the same operators who displayed the
utmost circuit discipline during maritime disasters in which a worldwide
silent period would be imposed on the distress freq'y. Imagine that.
They'd participate in the WX OBS "contest" every six hours yet when it
came time for them to perform in an emergency, their ability was flaw-
less. I should know - I worked these fellows on the maritime bands
for four years, day after day.

It would be nice if those who have no facts nor experience in certain matters would cease their speculation in regard to such matters.

> Gary Coffman wrote:

> That wasn't the case 30 years ago. Then every youngster started
> out on HF.

HF WAS Ham Radio 30 years ago. Sure, there were VHF bands, and there
were
MANY people enjoying them. But today's big draws to them: Repeaters,
satellites, packet, etc didn't exist or was in VERY limited use.

> I recently made a very big effort to get a ham club started in our local
> junior high school.

Good for you. THAT'S how to get the hobby to grow. Not by sitting on our
collective overweight butts (now that's a survey to do: Average weight
of
the average ham. I'd suspect THAT'S on the upside, too ;) (myself
included))

> But the kids don't seem interested in HF

That's because most of the TECHNOLOGY SEEMS to be above 50 MHz, and it's
the
TECHNO-STUFF that turns kids on.

> I haven't found any HF'ers interested enough in the kids to work with them.

THAT'S too bad, and THAT'S the biggest obstacle to the growth of the
hobby.

> The kids think packet and satellites are *cool*, but they aren't impressed
> with HF.

See my above comments about kids and "techno-stuff"

> Even a kid (or perhaps especially a kid) can see that there is no rationality
> to allocating HF access based primarily on Morse test speeds.

(Sigh).. OK, here I go into the snake pit (with respects to no-coder
Bill
Sohl, K2UNK, no-coder, frequent poster here, and important mover and
shaker for the NJ ham community to the state's often difficult
legislature)....

Morse code does not guarantee that all hams will be GOOD people, or GOOD
operators, granted, BUT.. The argument that it limits the number of hams
because it's difficult to learn is a FAULTY and DANGEROUS argument.
Faulty

because I don't believe we would get that many more HF ops even if it were
taken away (see my above reasoning). Dangerous because if we allow the
excuse "it's too hard" to be acceptable, then we might as well say that
ANY testing is "too hard" and eliminate it all. (Please don't tell me here
that international regulations don't allow this, I'm being HYPOTHETICAL here).
Actually, the point could be made the a code test is an even MORE relevant
test for a ham radio license than a written test for HF operating. Why?
Because a GREAT deal of HF work is STILL CW. Sure, NO ONE else uses it anymore
besides hams, I know. But the point is, WE DO. Even those of us who don't
have to (we have voice/data privileges) still do. So, whether it's a BETTER
mode, or whether its important to emergencies any more DOESN'T MATTER. What
matters is that there is still A LOT of CW on the HF bands, and to be able
to operate on the HF bands, you should be able to speak the language of a
good portion of the HF bands, namely CW. Now.. something I MIGHT be open to
is some sort of "voice/data only" class for HF that doesn't include a CW
requirement, but I'd have to consider that.

> And the main reason for that was the ill will which tore adult
> clubs to pieces due to the classism fostered by Incentive Licensing.
> I could write a book about that. I was there, and I saw it happen.

Incentive licensing was 30 years ago. Many of us weren't hams then, a lot of
us weren't even born. In fact, the topic is SO irrelevant that I'm not even
sure what it exactly was (as I'm sure a lot of today's hams aren't either).
Maybe someone could give me a "Reader's Digest" version of exactly what happened

> rapidly, and effectively.

I disagree, Gary.

For example, in the most popular US radiosport contest, the ARRL November Sweepstakes, each exchange consists of 5 separate items of information, unknown in advance to the receiving operator. The return message also consists of 5 items, unknown to the receiving operator. This information (total of ten items) must be accurately transcribed to both logs. A good Sweepstakes contester will complete more than 1,000 contacts (10,000 transcribed peices of information) in a 24-hour period. Any single incorrectly copied or transcribed item in the contact invalidates the entire exchange. I would characterize this as "accurate", "rapid", and "effective".

Further, in addition to the message handling skills shown above, contest operators tend to have better stations (especially in terms of reception to "pull out the weak ones") than the average station, giving them an advantage in hearing weak signals out of a disaster area. Since contests frequently cause severe crowding, noise, and mayhem on the bands, contesters also develop above-average skills at receiving under difficult band conditions.

Also, because using every propagation advantage is key to maximizing their score, contesters typically are students of propagation trends and are better able to pick and choose operating frequencies which are optimal for the desired communications path, and being able to predict the next needed band change.

That's why knowledgeable SEC's always try to recruit experienced contesters into their emergency preparedness organizations.

>hours could you run a 100 watt rig from a small car battery before it
>would need a recharge? I'm talking about expeditions where we
>typically make a couple of thousand QSOs a day ... not mobile
>operation.

Yeah, but you can start the car from time to time to recharge the battery.
I do that when operating from motels. I just run a pair of heavy jumper
cables from the car into the room if I'm setup in there. Otherwise I operate
from the stationary car. If you're stuck in some location where you can't
get the car nearby, you've got a problem with this method. Otherwise you
can work a whole weekend on the gas in the car. You can operate a couple
of hours before needing to start the car for a recharge. Less than 10 minutes
willl have the battery topped back up, and you can operate while the car is
doing that too.

(Note doing that is tough on starting battery life, but hey, if it's a rental car,
you don't care. If it's your own car, use a second deep cycle battery diode
steered off the alternator for the radios.)

>Also, operating CW and keeping a log whilst on the move is kinda
>awkward ....

Some people claim it isn't, but I'm with you on this. The answer is
very simple of course. Park. That's what I do when I go mountaintopping
(of course I can drive to the top of our so-called mountains). I find a
nice overlook where I can park. Set up the antennas, and have at it.
I may spend an entire weekend that way, living out of the car. I suppose
if the car is itty bitty you might want a tent.

Basically what I'm saying is that anywhere you can get a car, you have
a power supply. Since most places I'd consider operating, I can get a car
to the site, I'm set. When I can drive to the site from home, I use my

Cherokee which is setup with dual batteries and has all the rigs nicely mounted. When I have to fly there, I rent a car and just use jumper cables to hook up power. Of course I try to use better than mobile antennas in either case. I couldn't do that if I were mobile in motion, but it is no sweat if you're parked somewhere for an extended period.

This same technique will work with a boat. You can run off its batteries, recharged from time to time by its engine. You don't have to be at sea either, the boat can be moored near your operating location. Virtually every motor vehicle of any kind has a battery and a way of recharging that battery. That's your power supply.

If you're going to operate for more than a couple of days, you may have to break off for a bit and go find a gas station. If you're in the middle of nowhere, carry extra gas with you. If you're clinging to some rock somewhere in the middle of the ocean, you won't have mains power anyway, and you can get generators that output 12 volts directly. That's your power supply.

About the only situation where you might have mains power and not be able to get a vehicle to the location would be if you're operating from the top of a high rise building. Then I'd bring a mains operated power supply. Astron makes some lightweight switchers.

Ham Radio is not the way it was when I was growing up these days when you make a contact here's the way it goes My name is..... QTH is.....Your 559.....please QSL 73s What happened to the RCC club or like one qso I have heard on 15 meters when one station in Brooklyn NY was in qso with a station in Alaska and the NY station asked him if he could stay on the frequency while he call's up his friend to get on the air so he can work you. my friend needs Alaska he is trying to get his W.A.S that grate a W.A.S by appoitment and forget 75 meters that's a ZOO. Lets go back to the old days when the FCC gave the exams.

>still to come somewhere in the Golden State. Do I advance-ship my QRO rig
>out by UPS Next Day Air, just so as to have a *real* emergency capability
>on hand, just in case? Would you? Would anyone in his right mind?

Bring what you want. I travel with an HT which probably
would offer far better usefulness in an emergency. Odds are
that if a disator struck where I was visiting I'd be far more
concerned with the health and safety of my family and self

before even thinking of going on the air.

>> Dick thinks no one can see a QRP possibility. Sure
>> there MIGHT be one person, but that QRP operator will
>> not be an integral part of ongoing emergency commuications.

>No, probably not..... but he just might be the first or only person in a
>disaster area with any communications capability at all....

Not likly at all. Why would a QRP op tend to be the ONLY
ham in the disastor area?

>You Code Phobes just insist on dealing Mother Nature's hand for her don't
>you?
>Don't you know *It's Not Nice To Mess With Mother Nature?*
>"She" will bite you in a very unpleasant way in a very sensitive area if you
>mess with her too much. And then you can blame it on "Implementations".

Unfortunately, actual emergency preparations and history
indicate that QRP and code haven't had a need at all in such
cases.

>> There are much better equiped hams that will and do
>> meet the challenges.

>Fer damn sure sir! But I guarantee that if I fired up the QRP rig on one of
>the FISTS frequencies, I would have near-instant contact, whatever the
>circumstances.

At the same time that the area hams who actual made real
emergency preparations were also on the air implementing
and using their communications in an integrated fashion
with area emergency forces.

Ooops. I found it. www.jarl.or.jp. Also this cute translation.

JN1YUU, a club station in Takahana Elementary School in Inzai-City,
Chiba-Prefecture, is known as an active schoolchildren's club station.
Mr. Hironao Kishi, a teacher who earned an amateur radio license (on
students' advice!) said, "Frankly speaking, when I was appointed as
adviser for the club, I wasn't interested in amateur radio much. I was just

<stuff deleted>

Now, there are 27 students in the club. Interestingly most of them are vigorous girls.

Gary,

Kinda hard to do a DXpedition operation from inside a rental car!

While that certainly *could* be done, the fellow who lurks on
frequency for several exchanges to bone up on the information is
not a good contest operator, and not who we are talking about
when we say that *good* contest operators are excellent candidates
for good emergency communications operators.

QST de W1AW
DX Bulletin 14 ARLD014
From ARRL Headquarters
Newington CT April 9, 1998
To all radio amateurs

SB DX ARL ARLD014
ARLD014 DX news

This week's bulletin was made possible with information provided by Tedd, KB8NW, the OPDX Bulletin, Martin, N1FOC, 425DXnews, DXNL, QRZ DX and Contest Corral from QST. Thanks to all.

ROTUMA ISLAND, 3D2. Members of the OK DX Foundation will be QRV for one week as 3D2CB/R and 3D2WC/R. Look for CW and SSB activity on 160 to 10 meters, including the newer bands. QSL via the OKDXF.

EASTERN MALAYSIA, 9M8. Peter, PB0ALB, plans to activate 9M8CC from April 10 to May 22, from Kuching, the capital of Sarawak. Activity is expected on 80 to 10 meters. QSL to home call.

TONGA, A3. Ed, K8VIR, will be QRV as A35VI until May. Look for activity on 14260 and 21230 Khz. QSL to home call. Paul, A35RK, is also QRV on 80 to 30 meters, using mostly CW. QSL via W7TSQ.

CHINA, BY. Terry, VK4MZ, is QRV until April 24 as BY1QH/VK4MZ. QSL to home call.

CANARY ISLANDS, EA8. Ron, G4DIY, is QRV as EA8/G4DIY until April 11. He is active using mostly CW on 20, 17 and 12 meters. QSL to home call.

KERGUELEN ISLANDS, FT/X. Rene, FT5X/FR5HR, has been QRV on 20 meters between 1300 and 1400z. QSL to home call. Helios, FT5XN, has been QRV on 10 meters from 1100 to 1200z. QSL via F6PEN.

WALLIS AND FUTUNA ISLANDS, FW. Dick, DJ2EH, is QRV from Wallis Island, IOTA OC-054, as FW2EH. He is active from 160 to 10 meters using CW, SSB and RTTY. QSL to home call.

ARUBA, P4. Martin, VE3MR, is active as P49M until April 22, and has been QRV on 12 meters between 1400 and 1800z. Check also 17 and 10 meters around these same times. QSL to home call.

SUDAN, ST. Claus, ST1AP, will be active in his spare time as ST0AP from the southern region until September. QSL via DJ6SI.

GREECE, SV. Nilay, TA3YJ, and Berkin, TA3J, are QRV until April 12 as SV/homecall. Activity can be found on 160 to 10 meters, including 2 meters and 70 cm. QSL to respective home calls.

VIETNAM, XV. Rolf, SM5MX, is active as XV7SW until mid May. He will operate CW from the QTH of Torsten, XV7TH. Look for him on 80 to 10 meters. QSL to home call.

NEW INCOMING QSL BUREAU ADDRESSES. There are new addresses for the W5 and KL7 Incoming QSL bureaus. They are; The ARRL W5 QSL Bureau, Magnolia DX Association, PO Box 999, Wiggins, MS, 39577-0999; The Alaska QSL Bureau, PO Box 520343, Big Lake, AK, 99652.

THIS WEEKEND ON THE RADIO. The Japan International CW DX Contest, MARAC SSB County Hunter's Contest and the QRP ARCI Spring CW QSO Party are all on tap for this weekend. On April 13, the ARRL VHF/UHF Spring Sprint for 144 MHz and the Low Power Spring Sprint are scheduled. Please see April QST, page 102 for details.

On the other hand, that is superb training for new hams who are trying to increase their CW. I did that lots when starting out, and contests were fun besides.

You've missed some great excitement, Walt. In the past, 20m has seen
several distress situations involving privately-owned yachts.

Normally what would happen is that a ham would copy the distress thus
making him the controlling station. We (US Coast Guard) would usually be
quickly notified and would then bring up our (10kW) xmtr on freq'y taking
control. Weeks later we'd be flooded with QSL cards from around the
world! Nothing like real live drama on the ham bands.

Hi Walt,

I guess it depends on where you are listening. Granted I have been a ham a mere 17 years and have heard only two actual maritime or marine emergencies on 20 meters but I am sure there were many more. Remember when 14.313 was a useable frequency? On VHF, having lived on or near the coast, there were many more emergencies which included me getting actively involved with search efforts. Geography might be a big factor here.

Why would that be, Hans? Are cars too small, or are hams too big?
There's an answer to that dilemma, pitch a tent next to the car, or
rent a van. Realize that we're talking about using the car's electrical
system as an alternative to lugging along a mains power supply.

Anywhere you're likely to find AC mains power, you're likely to be
able to get a rental car. (And the rental car is useful for things
besides powering a ham rig.) In places where you can get neither,
the point becomes moot.

If you're on some barely above the tide line rock in the middle of nowhere,
you'll find no use for a mains operated power supply, because there are no
mains. Nor will you find a rental car. But you may have a boat that will do
instead. Most of them also have a 12 volt electrical system suitable for
powering an amateur rig.

If you prefer to lug along a generator, why lug along one that also
requires you to lug along AC power supplies? Miller has a nice
line of generators which put out 12 volts DC at up to 400 amps.
They're also MIG welders, handy for assembling an antenna array.

A friend of mine makes a neat little 12 VDC generator set from
an auto alternator and a weedwacker engine. It puts out 60 amps,
and is lighter and smaller than many AC mains DC power supplies.
(Noisy as hell, though, recharge the battery and shut it off.)

Think outside the box. That's good practice for emergencies,
when mains power will surely not be available, but in most cases
a car or other vehicle with a suitable 12 VDC system will.

Aside from the serial number, they're all *constants* which
the sending operator can have pre-canned. And the format is
standardized so the receiving station knows exactly what
information to expect. If he does miss part of the exchange,
he can just hang around and fill in the holes when the other
station makes its next contact.This is not the same as delivering
a Hazmat query or response, reporting the location of trapped
persons, or handling a list of urgently needed medicines and
supplies for a shelter, or handling a list of survivors with details
of their injuries and requests for field treatment advice.

Contest exchanges, even this more elaborate than usual one,
are nowhere near the sort of messages you'd be handling in an
emergency situation. In the last two weeks, metro Atlanta has
been hit by two killer storms spawning several tornados. In both
cases, amateurs have risen to the occasion of handling the emergency
and logistical communications needed during and after the events.
None of the communications handled even faintly resembles contest
operation.

The most effective communications has been done by tightly drilled
nets, operating in a quiet, orderly, and efficient manner. The only
chaotic and contest-like activity was by operators who hadn't prepared
or drilled to learn how to do effective emergency communications. They
were quickly and firmly excused from the nets. Fortunately, most of them
promptly obeyed net control and went elsewhere.

That elsewhere turned out to be a wide area repeater whose sponsors
have touted it for emergency communications. But the untrained and
undisciplined zoo that gathered there were anything but effective in

handling emergency communications. They really did sound like typical contest operators. They all appeared to *mean* well, but they didn't know how to *cooperate* in order to *do* well. They appeared to fall back on their training (which anyone does in an emergency) and attempted to use their competitive skills. The number of doubles, triples, tailending, etc heard on that machine was extraordinary.

I was somewhat surprised, and very gratified, that there were almost no instances of deliberate misbehavior, even on the zoo machine. But the amount of cluelessness was all too typical. Emergency operation is not contest style operation, and contesting doesn't prepare one to be an effective emergency communicator. One needs specific training, drill, and net discipline to be an effective part of an emergency communications *team*. Those who bothered to get the training and drill before the event were *ready* when the fecal matter hit the air mover. They deserve every bit of good press they are getting.

Fortunately, the wide area machine mentioned went off the air shortly after the tornados hit (and isn't back up as of this posting, I'm not sure why, *our* machine on the same site never missed a beat), so the press didn't get too big an earful of that CB-like chaos. (In fact I shouldn't slight CBers that way. A number of REACT teams behaved very well too, and the fake southern accents were mostly replaced by real southern accents with concern for their neighbors in their tones.)

As an aside to those in broadcasting, the EAS worked very well this time. The word was gotten out to the public very quickly and accurately. The 18 deaths last time were very sobering to all concerned, and every effort was exerted this time to make sure people had proper warning. The weather service perhaps even over-reacted with an almost constant stream of activations and notifications. (I'd rather they do that than not activate when they should have, as happened last time.) I'm pretty pleased with the way *everyone* reacted to this emergency, but there are a lot of hams who could have done even better if they'd gotten the proper training.

One of the tornados, an F5, came within less than 2 miles of my house. Huge steel electrical transmission towers were strewn all over the place as if a kid had dumped his erector set across the landscape. It is very very scary to hear that freight train sound when you know there aren't any train tracks nearby. Fortunately, I didn't take any damage, not even a stray limb down in the yard. I did take a number of direct lightning hits, but I've been practicing what I preach about lightning mitigation techniques, and suffered no damage from that either, even though all the radios were hooked up and operating.

Hans said:

> >Kinda hard to do a DXpedition operation from inside a rental car!

Gary asks:

> Why would that be, Hans?

Mostly because rental cars do not exist in easy proximity to the
sorts of places where folks go on DXpeditions .... Palmyra, Wake,
Temotu, Heard, Willis, Kingman, Spratley, Chatham....

Walt Davidson <no.junk.mail@thank.you> wrote:
>US Coast Guard Radio Officer (redundant) ???

Not at all. The USCG does much more than just listen to radios. They're our maritime law-enforcement arm, enforcing *all* federal laws (water-related or not), including drug interdiction, customs, immigration, fisheries, and anything else Congress feels like tossing at us. Other duties: Aids to navigation (lighthouses, buoys, ranges, coastal radio navigation beacons), ice-breaking in the Alaskan and Great Lakes shipping lanes, search and rescue (over-water and inland), water pollution investigations, maritime safety (which the boaters hate - "Attention Skipper - Prepare to be boarded for a safety inspection!" [which is really a guise to search for drugs]). They also inspect each and every commercial ship entering and leaving US waters, and every ship under construction is visited regularly by USCG engineers to insure all federal standards are being met. Our ships also provide a platform for oceanographic researchers.

Of course, when ordered by the President, we become a component of the US Navy, so our military readiness has to be on par with that of the Navy's. Sad to say, the Coast Guard lost more men per capita during the Viet Nam war than any other military service. The same sad fact is true even during peacetime. Whether it be rescue swimmers dropping from helicopters in order to save someone from dangerous surf, or fire boat Coasties battling a water-front or shipboard fire, we do dangerous work.

I could list dozens of other duties, but I'm certain you get the idea.

Semper Paratus,
Jeff KH2PZ (active duty `76 to `80; reserve `80 to present)

1129. Malpelo - why so rare?

Newsgroup: rec.radio.amateur.dx
Date: 1998-04-10 00:00:00 UTC
From: desmith@telalink.net
Message-ID: <352e918f.30055838@news.telalink.net>
Source record: 29548

Semi-dumb question... Why is Malpelo Island so rare?

It's probably the rarest country in North America, if not the Western Hemisphere. But unlike places like Peter I and Heard, Malpelo isn't very far from populated areas of Central and South America. Unlike North Korea and Libya, the Colombian government (which rules the island) supports amateur radio, and foreign tourism.

So why does nobody ever go there? (yes, I know about HK3JJH's visit last weekend) Landing problems? Is it a nature preserve requiring special permission? Crime problems like Navassa?

Just curious..

Back in around 1977, while casually listening to HF we at a college club station heard and responded to a yacht in distress. One of a few operators who responded, someone else was in a better position to help, so we stayed on the sidelines. Club call was WA2SDY of Syracuse Univ.

It certainly is, Walt. US SWLs are not permitted to divulge content but are permitted to listen away--without license. If there is an emergency situation, the CG can transmit wherever the station in distress is transmitting and receiving.

I've personally been involved in several HF realtime emergencies through the years. Go figure...

No, that's a relatively new thing which big business foisted off as a necessity to our Congress. The idea of encrypting their cellular transmissions seemed to befuddle them.

1137. Backdating the inclusion of Australs (FO/A) and Marquesas (FO/M)

Newsgroup: rec.radio.amateur.dx
Date: 1998-04-11 00:00:00 UTC
From: lsica@visi.com
Message-ID: <7TJX.3$Ea3.90479@ptah.visi.com>
Source record: 29556

I thought SOMEONE should start a DXING thread here for once, so here goes:

There is an unshakable argument for the inclusion of the Marquesas and Austral islands to the DXCC list. French Polynesia inarguably qualifies as a "Political Entity" because of its IARU society (Rule 1C), which qualifies both the Australs and the Marquesas because of the "distance" rules (2bi and 2bii). The only way the DXAC can avoid their inclusion is a BLATANT ignoring of their own highly touted "DXCC-2000" program. Such a turn around is EXTREMELY doubtful. However, they probably WILL try to reject the requested 1983 "Start Date". I believe they will quote the following definitions:

Discovery Entity: An Entity "Discovered" after the listing is complete. This applies only to Geographic Entities, and my occur after a future rule change, or after an Event has changed its status

Discovery Date: Date of the rule change or Event which prompts addition of the Entity. This is the Start Date for a Discovery Entity.

If the DXAC wishes to reject the backdating of FO/A and FO/M, they will argue that their inclusion is due to a "rule change" that occurred on 1-April 1998.

This argument can be shown to be faulty. Lets break down the definitions, piece by piece.

"An Entity 'Discovered' after the listing is complete":

The application for separate DXCC status in 1989 shows that this Entity was "discovered" long before the DXCC-2000 rules were even thought of.

"(Addition) may occur after a future rule change, or after an Event has changed its status":

The argument against this is that there was no rule CHANGE that caused the inclusion of FO/M and FO/0, but only a rule CLARIFICATION. The previous definition of a "Political Entity"/"Point 1 DXCC listing" was vague, and can be argued that it was applied inconsistently and haphazardly. What the DXCC-2000 rules did was to CLARIFY AN EXISTING RULE. In other words, French Polynesia SHOULD HAVE qualified as a DXCC

listing under Point 1 of the DXCC rules back to 1983, not just qualified because of distance from a "Parent" country. And since French Polynesia was a "Point 1 Entry" even then, islands under its political control but OUTSIDE the distance limits of the rules (250 miles/500 miles) should have ALSO qualified as SEPARATE DXCC LISTINGS. In other words, FO/M and FO/A met the qualification of being separate DXCC listings as far back as when French Polynesia should have been recognized as a "Point 1" listing, in 1983.

Discussion?

I've wondered that, too. From seeing pictures of the island, I'd guess it's a tough landing/tough to get equipment up the rock to a station site. Same reasons why KP1 was tough even BEFORE the drug dealer problems became a REAL hazrd there.

Why do so many hams call a dx station when it is obvious they can not hear them? In every pileup I come across these days there are hams who give out their call continuously never hearing what is going on. What are they hoping for? A dx station I was trying to work the other night went qrt and there still was a bunch of stations calling him 10 minutes later - makes them look real bright.

Hehehehe.. A LOT of DXers DO seem to forget rule #1, "If you can't hear
'em,
you can't work 'em". But, as far as calling the DX after he SAYS he's
gone
QRT, well, A LOT of DX stations LIE :). They SAY they're going QRT, but
they're actually sitting and listening on frequency until the pileup
thins out.
I've picked up a few good contacts myself that way ;)

Walt ... at last one thing that you and I can agree on ...

> Traffic handling requires the ability to listen - not transmit - for
> long periods, to act without question upon the instructions of a
> duly-appointed net controller, and to pass often-complex messages
> accurately and effectively with a minimum of fuss.

And that requirement favors the use of modern digital transmission
methods ... not an outdated, error-prone manual method like Morse.

> It seems to me that all those qualities are anathema to today's
> typical contest operator.

Again we agree ... contest operators are self-trained in aggressive,
often boorish behavior that has not use and no place in emergency ops.
Contest operation "trains" for EXACTLY the wrong sort of operation
and behavior that emergency situations require ... and it wastes a
hell of a lot of otherwise useful spectrum, too.

Here in the US it was always legal to listen, but illegal to use the
information for personal gain, competitive advantage, etc.

The whole idea that one can make radio communications "private" by
passing a law is absurd. (But what can one expect from the govt.,
right?)

> A number of people have been
> prosecuted for listening to police transmissions; they were fined and

> evidence of "intent to intercept a private radio signal".

Typical British combination of anal/stupid ... unless is is encrypted
using stong encryption, the term "private radio signal" is an ozymoron.

> The UK Customs are well known for seizing anything coming into the
> country which they think "might" be illegal. UK Customs can do pretty
> much as they please. Unlike the police, they do not even need a Court

So you live in somewhat more of a police state than do we in the US.
So what? That doesn't make it right ...

Baloney ... too competitive, too anal about mode of operation,
and often too dependent on a fragile QRO station with big beams,
amp, etc. that may not be available in an emergency situation.

Com'on people.. we all KNOW who the best emergency ops are! It's that bunch that runs 2KW to ragchew 50 miles away EVERY day at the SAME time on the SAME frequency, regardless of who was there before (be it previously started ragchew, DXpedition, Contest Operation or Distress Call).I think it's obvious what VAST skill set that sort of operation requires. (Hey, they must be smart. They paid umpteen thousand dollars for gear so they could save 10 to 15 cent/minute long distance charges!!)

1156. April Propagation Forecast

Newsgroup: rec.radio.amateur.dx
Date: 1998-04-12 00:00:00 UTC
From: ids@nol.net
Message-ID: <35306924.44054795@news.nol.net>
Source record: 29575

PROPAGATION - by AD5Q HOUSTON, TEXAS -- APRIL 1998

Wow! With the help of higher solar flux numbers, the spring DX season is on a roll. Nightpaths have opened up on 20, making the whole world easily accessible from anywhere in the northern hemisphere. I hope everyone in Europe worked the new one in the Pacific. There are two others that may be added soon, presumably under the new DXCC rules.

The polar paths have opened, and they are going to open wider. On 20, we currently have no problem reaching across Siberia to the moslem areas. As we approach summer, the grey line will tilt toward european Russia in the evening. With its dense population of CW operators, 20 will be vibrant with polar signals echoing everywhere.

The higher fluxes will make the 20 meter evening openings much better than last year. The band will stay open longer, with paths open to more of the world. East/west paths will be open for much of the day, with the path to Africa beginning in the afternoon and continuing well into the night. Europe will peak in late afternoon, and this path is improving as the morning path to europe fades. The new path emerging in the morning is a pipeline to Asia along with more polar openings. All these openings will be with us through the summer.

And then there is long path on 20. Currently the morning and late afternoon paths across the Antarctic are in great shape, but will deteriorate as we move into summer. For now, we can work into southern Asia, the Middle East, N.E. Africa, Europe and Russia in the morning, and to Indonesia and S.E. Asia in the afternoon. This perspective is from Texas, with a somewhat shifted outlook from either coast. Best of all: the southern US dominates in long path pileups :-)

The fine spring conditions are also enhancing propagation at higher frequencies. Polar openings are common on 17 meters, and some northerly signals are coming across on 15 (especially from equatorial areas). 12 meters is also active, but reliable high latitude propagation on 10 & 12 will have to wait.

As we move to late spring, conditions will change on 15. The band will open later, and remain open after dark. Watch for Europe to start coming through in the afternoon, especially when the fluxes are up.

40 is still in good shape, but with great propagation on other bands in the evening much of the activity has moved higher. Options to work DX currently exist on many bands, and the best of this variety will be found in April of May. Enjoy!

Not if you have any desire to win, it can't. You'd have so many fewer QSOs than other competitors that it wouldn't even be close.

Carl, the best thing about you is that, when you don't know what you are talking about, you don't just stop with simple statements. You need to really demonstrate your lack of knowledge.

How would "too competitive" be a reason that contest ops wouldn't be good emergency ops? Why would they be competitive in an emergency situation?
Don't you think they'd be able to tell the difference between it and a contest?

On what do you base your "anal about mode" no-brainer? There are contests for all modes.

Where did you get the idea that all contesters use high power and large antennas?

Hey Mezgie

That was quite a bar room brawl on 3950 tonight, no??? The Field Mice got their tails caught in the mouse trap.

Now it's 4.30 AM and guess who shows up on 3950????

None other than W5VVI, playing suck-butt with Side Car Sidney and Knothead Don Smith. Lying as he usually does, he's claiming he missed everything on the radio tonight. Says he just got up, and doesn't tape anything on 3950 anymore.

Hey, if you believe that, there's a replica of the Brooklyn Bridge right out here in Southwest Missouri you can buy real cheap.

Norm just finished blaming me for the current state of affairs on 3950, that I started it all. Everything was fine and dandy on 3950 until I showed up and caused all the trouble. Never mind I've bee off the air for nearly 2 years, I'M STILL RESPONSIBLE.

What a bunch of crap. Well, if hams are bored with what they're doing on their usual frequency, they can alwasy tune 3950kc's, 10PM Eastern time every Saturday night for hysterical entertainment, nonstop jamming, nonstop finger-pointing, and limitless foolishness from the Blowhard of New Mexico, K5BLB.

I didn't get around to my post for Kevin Alfred. No big deal. He's ok, but he's just got too fat a head is all. A little dash of humility would go a long way. If he helps tie Sidney's tail in a knot, then that's good. Do you remember when Vic and the Girls used to play footsie with Dave and Norm?? They thought they could appease the Devil but, as MUR said, ""IT JUST DOESN'T WORK THAT WAY"".(got that on tape, by the way). Gee, who used to say that all the time """I GOT IT ON TAPE"". Right you are, none other than W5VVI (vivacious vindictive idiot), colleague of WA9KJI, King of the Jammers. Yessiree, W5VVI, now on 3950 as I write this, bitching about jammers, whereas for ten years, he has defended the worst jammer throughout the entire history of ham radio, WA9KJI. Sort of sounds like the pot calling the kettle black, no??? Yessiree, WA9KJI, who has jammed 3950, 7250 and who knows what other frequencies with his tape collection, probably a lot of it made by none other than W5VVI. And they want to bitch about jammers, that everyone that disagrees with them are Nazis. N5OUG says tonight that you're all Nazis. You're not supposed to criticize the government for running us into a 4 trillion dollar debt, causing numerous wars, etc. I guess the public should just be happy for all this crap and

enjoy it. If you complain about anything, YOU'RE A NAZI.

If you recall, I tried to explain a few things to you back in 95 or 94 about W5VVI. If you think this guy is benign, think again. What's going on right now proves otherwise.

ah yes, isn't the world interesting?

Catch ya later mezgie dog.

GM Tim -- when DXers run out of countries & zones to work-- they look
for a new challenge and many islands are uninhabited - thus it takes
special expeditions there and consequently many are very rare. There are
several awards and groups, most noteably "Islands On The Air (IOTA)".
The IOTA list and several more can be found at URL:
http://pw2.netcom.com/~ac6v/page3.html#IOTA

Also 14 other links are there for Island information including nets,
frequencies, dxpeditions and much more.

It may be unheard of; but given an emergency situation, I would hope the Radio Officer has some authority and latitude to work the vessel in distress directly and to avoid needless and confusing relays if at all possible.
>
> (2) It is strictly prohibited for anyone to listen to stations in the

> station.

I suspect you will find that stations have loosened up a bit in this area. The various monitoring magazines regularily print information regarding current QSL policies and photos of QSL cards from several of the larger U.K. Coastal Stations. Some are cards that the listener made for Radio Officer signature, and others are professionally printed cards from the station itself. Likewise, there are also cards starting to show up from some of the larger and more common U.K. military stations (RAF and RN).

In all seriousness, MARS is mostly the best program.
Disciplined operators, operating daily in nets. Most
hams do not want the discipline that MARS requires.
Too military!

Becasue that's their M.O. ... they spend their lives in a
constant battle to stomp the other guy into the dust with
their QRO signal and be the first to work the DX station.

When time comes for an emergency op, their adrenalin gets
running and they just can't help themselves ... they double
and but in and show none of the discipline that the situation
requires.

I've seen it happen over and over again.

For Sale

MPAC-----UHF Repeater by Aerotron

This commercial repeater has been retuned to 444.350 transmit 449.350 receive with preamp. Transmitter is 40 watts out, this repeater has been in service in Hatfield, Arkansas for the past 5 years. The repeater has its own power supply 110volt also has CTCSS multiple tone boards. Repeater can be used in PL mode or non PL mode. Also has a complete set of manuals. Repeater does not include duplexers.

I am asking $800.00 for the repeater and I have a 90 watt amplifier that I will sell for $100.00 with the repeater.

I also have a DB 440 8 bay repeater antenna which I am asking $150.00 for with or without the repeater.

Will sell the total package for $975.00.

I will be at the Little Rock, Ar hamfest on 4-24 and 4-25 and will deliver there or you pick up in Hatfield, Ar.
Or call me at 870-389-6516
Thank you George N0EOQ

Nope ... not in my case anyway. I did arrange to have a local Russian chum write the address on the envelope in Russian ...hoping that might help. But to-date, it has not resulted in a return QSL.

FWIW, I did the same thing with JY4MB ... I had a native Arabic speaker write the address on the envelope and well as a *personal note* ... but have not seen a return yet ... to that nor my previous SAE +$ ... (more than a year ago). Argghhhh

Cheers

I host a D2mac satellite TV web site. On it I run a successful secondhand items for sale page which is free to advertise on.

I would like to offer the same on secondhand Ham equipment. If you have something to sell that you would like on this HAM page (on my existing web site with 15,000 veiwers a week) then drop me a line

Based on Gary's description about the real emergency that just happened in
Atlanta, I'd say, yes, that's EXACTLY the problem - they COULDN'T tell the
difference.

DX is and it is much more than just QRO. The statement above indicates
Carl has worked little or no DX on HF. I doubt that Carl could listen
to a pile-up and determine where the DX will likely be listening on
his next QRZ. A kilowatt does no good if it transmitting on the wrong
frequency. Many new DXer's prove that daily.

Another blanket statement ...
>I've seen it happen over and over again.
I'm certainCarl's knowledge emergency operations is as great as his
knowledge of DXing.

Take no offense, Walt. It's just Carl's way of demonstrating that the rest of us are "Ugly Americans". He takes the view that if some us believe Ian in N.Z. to be a git, we're bashing foreigners. I'm certain that he doesn't see the possibility that we simply don't care for Ian.

I saw a guy in Africa who could do cartwheels with a serving tray full of drinks and never spill a drop. I don't, however, go around telling folks that all Africans can do it.

Many contesters operate in the 100w class--hardly likely to stomp anyone in the dust. Others operate QRP--guaranteed not to stomp anything into the dust. Since not everyone is perfect, you could have seen it on occasion. You could also observe the same in any other segment. You'll have to regale us with tales of your particular training in the emergency arts, Carl.

Carl,

Stick to topics you know about. From the above, it is clear you
are ingnorant about radiosport matters.

I'd debate the issue with you, but first I'd need to educate you,
and I don't have the time for that.

Hans

Any one know who has the logs for TT8AL circa 1978??? Operator was
Gaston in Fort Lamy on 10 meters.

Also need cards from UG6GAF or UG6AI circa 1980/81. Have tried several
times -- no response.

About four away from Honor Roll and these would sure help.

Thanks es 73

Cross-posted to:
uk.radio.amateur,uk.rec.cars.4x4,rec.radio.amateur.dx,alt.ham-radio.dxing,alt.ham-radio.hf,uwarwick.societies.amateur-radio

Solihull Heritage Run: Sunday 26th April 1998

The very special call GB50LR/M has been granted to operate a MOBILE SPECIAL EVENT STATION using this callsign. This one-off mobile event required special authorisation to operate a mobile GB station.

This celebration is a cavalcade of three groups each comprising 50 Land Rovers following an historic route through the region around Solihull, where Land Rovers are built. One of these groups will have a Land Rover built in each of the 50 years. The others will include special vehicles and those driven by celebrities.

It is fully described in a booklet, published by Land Rover, titled 'The Inaugural Land Rover Solihull Heritage Run'. The full route itinerary and map is given in the booklet and the route itinerary below.

>From about 8:00 the 150 Land Rovers on this run will start to assemble at the NEC West Car Park near Birmingham. In the 50th position of the second group will be Paul Clark's Radio Body 101 Land Rover.

The station will start to operate just before the first vehicle departs at 10:00. Five minutes after departure the first vehicle will arrive at the Land Rover factory at Lode Lane, Solihull. A quarter of an hour later is the departure for Solihull town centre along the historic High Street where the Mayor and Mayoress will greet the run.

The cavalcade will depart at 10:40 for Gaydon, arriving at the Heritage Motor Centre at 11:30 for a four hour stop which will include lunch and visiting the Museum. The return run will commence at 15:30 visiting the National Trust's Baddesley Clinton moated manor house. After a 75 minute stop the Land Rovers will depart at 17:35 heading for Meriden - the centre of England.

The journey finishes where it started at 18:20. Please note that all times given are for the first Land Rover in the run and that they are approximate times. If you want to collect a QSL card please wait your turn in any queue.

Many Land Rovers were manufactured for the British and foreign armed forces, often with the designation - FFR: Fitted For Radio. The vehicle that will be used for this radio station is one of the 101 inch forward control models, built exclusively for military applications.

There were 3 main variants of 101s. Most were the canvas soft-tops, a few were converted into ambulances and a small number were made with a radio body. This is a metal body with a separate compartment behind the driver/navigator compartment, equipped with various radios.

I will be operating the station with the help of Carol Wilkinson, G1UGK, from the radio compartment of a 101 Land Rover on HF and VHF. The 101 Land Rover will be driven by it's owner, Paul Clark. We are both members of the '101 Forward Control Club and Register', a club that is part of the Association of Rover Clubs.

We will be operating on a single frequency (+/- QRM) on HF using an Icom IC-706 which is rated at an output power of 100 watts. There will be no additional power amplifier. The frequency will be chosen on the day depending on band conditions.

I am hoping to be in contact, on the used frequency, with a fixed home station throughout the run, to act as a 'net' controller, with higher transmit power. A frequency in the 145-146Mhz band will also be used.

We will be using a navigational satellite GPS receiver to display the Land Rover's exact location. During every contact the OS National Grid Reference (ie. SP 149 817) will be given so that all stations will know the progress of the cavalcade and where their QSO took place. If it is possible this grid reference may also be written on the QSL cards.

We will be pleased to confirm your report with a special souvenir QSL card that Rover Group will be printing at their factory.

73 de Alan G4ENS.
Land Rover 50th Celebrations, Special Event Stations Co-ordinator.

Solihull Heritage Run: Sunday 26th April 1998

Greetings,

I am looking for someone that can that can be the HF 'net' controller throughout the run. That person will be in contact with GB50LR/M from a fixed home station with higher transmit power.

You will be an experienced HF operator, able to suggest the best frequency to use depending on band conditions. The success, or otherwise, of the operations will depend on your skills in this very important position.

We will be operating from the 101 Radio Body Land Rover on a single frequency (+/- QRM) on HF using an Icom IC-706 which is rated at an output power of 100 watts. There will be no additional power amplifier.

If you consider yourself the ideal person for this task, then please e-mail me. Please tell me why YOU are the one to be selected.

I am also looking for some advice from those active on 2 Metres in the area from Solihull to Gaydon, that is the route of the Heritage Run.

I need to select a frequency to operate FM Mobile during the run, without using any local net frequencies.

I would expect a large number of QSOs from those who collect Special Event QSL cards as GB50LR/M is rather unusual. Yes, a two digit call that is also MOBILE.

If you are able to recommend a suitable frequency then please e-mail me.

Many thanks.

Hi all Landy fans,

Land Rover 1948 - 1998
======================

To celebrate the 50th Anniversary of Land Rover, a number of Special Event Stations will be operating over the next few months.

The Association of Rover Clubs with the support of Rover Group are holding a number of functions during 1998 and to mark this historic occasion I will be co-ordinating Special Event Stations at many of these functions.

The Special (Special) call GB50LR has been allocated to celebrate this Great British 50th Land Rover occasion.

The three main functions are:-

1. Solihull Heritage Run: Sunday 26th April,
2. 50th Anniversary International Rally, Eastnor: 21st-31st May,
3. Shugborough Hall: 27th-28th June.

The first function is most unusual in that special permission has been granted to operate a MOBILE SPECIAL EVENT STATION using the callsign GB50LR/M.

The station operators will be pleased to confirm your report with a special souvenir QSL card.

Future bulletins will provide more details of these 50th Celebrations.

73 de Alan G4ENS.
Land Rover 50th Celebrations, Special Event Stations Co-ordinator.

QTH: Stanton, Bury St Edmunds, Suffolk, UK.

>are different than the skills one might use in an emergency. My
>neighbor next door is #59 in the stock-car, figure-eight enduro at a
>local track. He drives quite rationally on the street.

But in a high pressure emergency situation anyone reverts to their
training. And the training a contester/Dxer gets makes him want to be
aggressive and competitive rather than being cooperative. This is
the main problem. A contester's radio skills are likely quite good.
His usual station is also likely to be quite good. But his basic
instinct in the clutch is different from that of the traffic handler
or emergency communicator. His first instinct won't be to ask
for a relay. His first reaction won't be to shut up and let someone
with better copy handle the situation. His first instinct will be to
pile on and try to make the contact.

That's the way he has trained. But it is usually exactly the wrong
thing to do in emergency communications. It takes a cool head to go
against one's basic training. You're fighting a behavior that has become
so ingrained as to nearly be a reflex. The military understands this.
They have a motto, "Train the way you'll fight, and you'll fight the
way you trained." When the adrenalin is pumping, we fall back on
conditioned reflexes. That's true in a gunfight, and it is also true
in a life or death emergency communications situation.

In solo events, like auto racing, contesting, or Dxing, such reflexes
are pro-survival and pro-winning. But in most emergency communications
situations, we're talking about team effort. Winning isn't important on
an individual level, but ensuring that the net's messages get passed
accurately and rapidly is important. A team member won't go for the

basket every time, he'll know when to improve the team's chances
by passing the ball. His personal score takes a back seat to the team's
score. That's a concept that goes against the training of the contester
and Dxer.

This Saturday April 18, from 8am to 5pm EDT, I will be operating from Imperial Polk Lodge No. 345 F&AM to commemerate the 36th anniversary of my Masonic Lodge. A nice certificate will be available for those who work and QSL me. I plan to operate mostly phone, on 20, 15 and 10 meters, probably around 25 khz up from General Band lower limit.

The masons are the largest and oldest worldwide fraternal organization, originating in England in the early 1700's.

Hope to see you on the air.

Gary

I'm writing a short article for my Ham Radio Club News Letter.
Within the article I'd like to provide a rough time range of
what it took other to learn the code.

How many weeks/months did you study it before you passed your code test?

What was the WPM of the test you passed ?

What's your estimate as to the total number of hours you spend studying
before you passed ?

Anything special that you did to help you learn the code ?

You can post your answers in this user group or email them direct to
me.

Thanks,

Bob Diaz

You're right, Wolf. Any girls offering themselves in the nude
should contact me directly. These Austrian radio hobbiests don't
appreciate you cluttering up their tidy newsgroup. And don't touch the
radios, either.

Now that we've fixed that, Wolf can feel safe reading the
newsgroup again. I'll take care of those generous nudists, I gurantee.

Hi Jay,

Sure do !!!!

Back when Bill passed away I was active helping him on the net. You may recall that I nominated him as Dayton Ham of the Year after he passed away.

All of Bill's logs were sent to Joannie, KA6V, who is an SK now also. Her husband, Gerry, AA6BB, handled the cards afterwards.

All of the QSL chores for SSIDX and others that the Bransons handled went over to Ron Lago, AC7DX, I believe his callsign is.

If the K6LPL/KH5 logs were in Bill's possesion then this is the route they would have followed.

Hi Bob:

Very interesting idea for a thread. I would like to contribute my own unique perspective:

I'm a relatively new ham, and my primry interest is in CW HF/DX. Just for chuckles, I easily passed the Technician exam, but find the VHF repeater stuff boring. Obviously, I needed to obtain a General to Extra class license - i.e. pass a 13-20 WPM code test. After doing some research I wound up following a recommendation NOT to start at 5 wpm due to the "barrier" at around 10 wpm. Instead, I chose to use the Koch variation of the Farnsworth method, and begin learning at 15 wpm from the beginning.

That was in February, and my initial progress was painfully slow! Now, 8 weeks later, I have proudly mastered 10 letters, :-(albeit at 15 wpm. About 10 days ago I was seriously doubting the wisdom of my choice. Fortunately, at about the same time I made some kind of breakthrough and began mastering letters much more quickly, and now average 2-3 days for each new one. I'm projecting a completion date (@15 wpm) of July or August, or about 6 months after I began.

At this point I figure that I could probably learn pretty quickly at 5 wpm to pick up a Novice license, but feel commited to the current method. I just hope my enthusiasm doesn't die before I get there, and it's depressing not to be able to plug the mike into the Kenwood TS850 that I acquired.

Come hell or high water I'm committed to learning 13+ wpm code, and participating in CW DX, but ironically wonder if my experience isn't a good argument for abolishing the code test? If anyone has any comments or suggestions on my progress, I would welcome them.

Mike Banz, KB3CDH

hello folks,
yeaaahhh that was a real hot shot for me...

Doug, Z L 2 U W heard my signal at wed. 15 of april at 17:25 utc on
the 30m band.

I want to send him direct a QSL-card , i have no callbook.

Does anyone have his QSL-Address ?

please post here or email to THBeckert@aol.com

vy 73 from Thomas , DL4SZ -QRP- !!!!

Hi All,

A little web searching turned up the French-Polynesia Home
page with links to pages about the Marquesas and Austral Islands.

http://www.french-polynesia.com/doc/other.htm

After reading a bit about the islands as tourist destinations
I doubt the guys are suffering down there. In fact they may
not want to come home. :-)

Looks like a terrific get-away-from-it-all vacation/DX-pedition.

Message-ID: <6h1u8s$htc@news.Hawaii.Edu>
Source record: 29486
Cross-posted to: rec.radio.amateur.dx,rec.radio.amateur.digital.misc

Archive-name: radio/personal-intro
Posting-Frequency: posted on the 15th of each month

This message describes the rec.radio.amateur.*, rec.radio.cb, rec.radio.info, and rec.radio.swap newsgroups, as well as their Internet mailing list counterparts and complements. It is intended to serve as a guide for the new reader on what to find where. Questions and comments may be directed to Jeffrey Herman, KH2PZ, (jeffreyh@hawaii.edu), or Paul Schleck, K3FU, pschleck@novia.net.

This message was last changed on 14 March, 1998.

History
=======

Way back when, before there was a Usenet, the Internet hosted a mailing list for hams, called (appropriately enough) INFO-HAMS. Ham radio discussions were held on the mailing list, and sent to the mailboxes of those who had signed up for it. When the Usenet software was created, and net news as we now know it was developed, a newsgroup was created for hams: net.ham-radio. The mailing list and the newsgroup were gatewayed together, eventually.

Over the years, as the net grew, the volume of discussion became progressively higher. First one by one, and then as part of two reorganizations, what was once one group became many. In the process, developments elsewhere on the net were reflected in the groups as they were created, most notably the change to place all of the ham radio groups in one hierarchy.

The collection of newsgroups continues to grow as more people join the net, and as more topics of discussion gain volume, I expect to see more groups be created as well. This follows what is happening on the rest of the net.

Nearly all of the radio newsgroups have corresponding mailing lists, the notable exception being rec.radio.swap. There are also a few mailing lists that don't have newsgroups.

The Current Groups
==================

It's important to post messages to the group that's appropriate for them, and not to the groups that aren't. The whole idea of having different newsgroups is so that folks who aren't interested in, say, homebrewing, don't have to wade through messages about homebrewing on the way to read about Field Day. Posting appropriately is just good etiquette.

The rec.radio.amateur.misc group is the catchall. It is what rec.ham-radio was renamed to during the first major reorganization. Any message that's not more appropriate in one of the other groups belongs here, from contesting to DX to ragchewing on VHF to information on becoming a ham.

The group rec.radio.amateur.digital.misc is for discussions related to (surprise!) digital amateur radio. This doesn't have to be the common two-meter AX.25 variety of packet radio, either; some of the most knowledgeable folks in radio digital communications can be found here, and anything in the general area is welcome. The name was changed to emphasize this, and to encourage discussion not only of other text-based digital modes, such as AMTOR, RTTY, and Clover, but things like digital voice and video as well. The former group, rec.radio.amateur.packet, was removed on September 21st, 1993. It is obsolete, and you should use .digital.misc instead (or the appropriate new mailing list, mentioned below). The group has .misc as part of the name to allow further specialization if the users wish it, such as .digital.tcp-ip.

The swap group is rec.radio.swap. This recognizes a fact that became evident shortly after the original group was formed: Hams don't just swap ham radio gear, and other folks besides hams swap ham equipment. If you have radio equipment, or test gear, or computer stuff that hams would be interested in, here's the place. Equipment wanted postings belong here too. Discussions about the equipment generally don't; if you wish to discuss a particular posting with the buyer, email is a much better way to do it, and the other groups, especially .equipment and .homebrew, are the place for public discussions. There is now a regular posting with information on how to go about buying and selling items in rec.radio.swap; please refer to it before you post there. To answer a frequently asked question: No, there is no mailing list that goes along with this group. If you can't read Usenet news directly, you're out of luck.

The group rec.radio.amateur.policy was created as a place for all the discussions that seem to drag on interminably about the many rules, regulations, legalities, and policies that surround amateur radio, both existing and proposed. Recent changes to the Amateur Radio Rules (FCC Part 97) have finally laid to rest the Great Usenet Pizza Autopatch Debate - it's now legal to order a pizza on the autopatch, if you're not in the pizza business - as well as complaints about now-preempted local scanner laws hostile to amateurs, but plenty of discussion about what a bunch of rotten no-goodniks the local frequency coordinating body is, as well as the neverending no-code debate, may still be found here.

The group rec.radio.cb is the place for all discussion about the Citizens' Band radio service. Such discussions have been very inflammatory in rec.ham-radio in the past; please do not cross-post to both rec.radio.cb and rec.radio.amateur.* unless the topic is genuinely of interest to both hams and CBers - and very few topics are.

The rec.radio.info group is just what its name implies: it's the place where informational messages from across rec.radio.* may be found, regardless of where else they're posted. As of this writing, information posted to the group includes Cary Oler's daily solar progagation bulletins, ARRL

bulletins, the Frequently Asked Questions files for the various groups, and radio modification instructions. This group is moderated, so you cannot post to it directly; if you try, even if your message is crossposted to one of the other groups, your message will be mailed to the moderator, who is currently David Dodell, WB7TPY. The email address for submissions to the group is rec-radio-info@stat.com. Inquires and other administrivia should be directed to rec-radio-info-request@stat.com. For more information about rec.radio.info, consult the introduction and posting guidelines that are regularly posted to that newsgroup.

The groups r.r.amateur.antenna, .boatanchors, .dx, .equipment, .homebrew, and .space are for more specialized areas of ham radio: discussions about antennas, the older tube based amateur, military, and commercial gear, commercially-made equipment, homebrewing, and amateur radio space operations. The .equipment group is not the place for buying or selling equipment; that's what rec.radio.swap is for. Similarly, the .space group is specifically about amateur radio in space, such as the OSCAR program and SAREX, the Shuttle Amateur Radio EXperiment; other groups cover other aspects of satellites and space. Homebrewing isn't about making your own alcoholic beverages at home (that's rec.crafts.brewing), but rather construction of radio and electronic equipment by the amateur experimenter. The .dx group is devoted to long distance amateur communications.

Except for rec.radio.swap and rec.radio.cb, all of these newsgroups are available by Internet electronic mail in digest format; send a mail message containing "help" on a line by itself to listserv@ucsd.edu for instructions on how to use the mail server.

All of the groups can be posted to by electronic mail, though, by using a gateway at the University of Texas at Austin. To post a message this way, change the name of the group you wish to post to by replacing all of the '.'s with '-'s - for example, rec.radio.swap becomes rec-radio-swap - and send to that name@cs.utexas.edu (rec-radio-swap@cs.utexas.edu, for example). You may crosspost by including multiple addresses as Cc: entries (but see below). This gateway's continued availability is at the pleasure of the admins at UT-Austin, and is subject to going away at any time - and especially if forgeries and other net.abuses become a problem. You have been warned.

Mailing Lists

In addition to the mailing lists that mirror the Usenet newsgroups, there also are a few that stand alone. These cover specific areas of ham radio, and discussion is focused on just those areas.

The cq-contest mailing list is for discussions of contesting in ham radio. To join, send email with the word "subscribe" on a line by itself to cq-contest-request@tgv.com.

The DX mailing list covers the finer points of DXing. This one is also joined by mailing "subscribe" on a line by itself, this time to dx-request@unbc.edu.

There's also a VHF mailing list, for VHF operators of the weak signal persuasion. You can join this one be sending "subscribe vhf" on a line by itself to vhf-request@w6yx.stanford.edu.

The QRP-L list is devoted to building and operating gear at low-power outputs. To subscribe, send an email to listproc@lehigh.edu and only write: subscribe qrp-l Your Name.

The TopBand e-list is devoted to all areas of operation on 160m. To subscribe, send an email to majordomo@contesting.com and only write: subscribe topband and follow the instructions you'll be sent.
This site, contesting.com, also hosts a couple dozen other ham-related e-lists. Use the above address, and only write: lists to get the entire index.

The Boatanchors e-list is devoted to the older tube-based ham, military, and commercial communications gear. To subscribe, send an email to: listserv@listserv.tempe.gov and only write: subscribe boatanchors

For homebuilding transmitters and receivers using tube technology, there is the Glowbugs e-list; send an email to:
majordomo@piobaire.mines.uidaho.edu and only write:
subscribe glowbugs <your@address.here>

The VHF DX discussion list can be accessed by sending an email to: majordomo@blacksheep.org and only writing: subscribe VHF-DX-discuss.

Qth.net hosts over 100 ham-related e-lists, including lists devoted to each state, manufacturer, mode, band - too many to state here. Send an email to majordomo@qth.net and only write: lists to get the complete index.

For one of the most complete indexes of email lists, see
http://pw2.netcom.com/~ac6v/pageae.html

Please do NOT send subscription requests to the mailing lists themselves; that doesn't work very often, and is very annoying to those on the list. Also, please keep your electronic mail address current with any mailing lists you subscribe to, as dealing with returned email is a nuisance for the person maintaining the mailing list.

A Few Words on Crossposting
==========

Please do not crosspost messages to two or more groups unless there is genuine interest in both groups in the topic being discussed, and when you do, please include a header line of the form "Followup-To: group.name" in your article's headers (before the first blank line). This will cause followups to your article to go to the group listed in the Followup-To: line. If you wish to have replies to go to you by email, rather than be posted, use the word "poster" instead of the name of a group. Such a line appears in the headers of this article.

One of the few examples of productive cross-posting is with the rec.radio.info newsgroup. To provide a filtered presentation of information articles, while

still maintaining visibility in their home newsgroups, the moderator strongly encourages cross-posting. All information articles should be submitted to the rec.radio.info moderator so that he may simultaneously cross-post your information to the appropriate newsgroups. Most newsreaders will only present the article once, and network bandwidth is conserved since only one article is propagated. If you make regular informational postings, and have made arrangements with the moderator to post directly to the group, please cross-post as appropriate.

Find a rare DX station....preferably working split......

The idea of the keyer is to reduce the "duty cycle" during tuning.
Best to use a scope and dummy load...key some dots and tune for max.
Then check meter numbers with a steady carrier.....

Hi Ralph

Get a license manual and a basic understanding of the general class
theory. That is where you want to be for the moment. Perhaps once you
are comfortable at ohm with your ticket, you might want to venture
further. Voice comms are not my favorite but I'm no 25 wpm guy either.
The general lets you play with all the toys, it damn near provides
full access to the playground. Its a great way to learn as you play.

I say this as a long-time general. I feel no need to upgrade. I am not
an electronics whiz nor do I ever desire to be one. Over the years I
have advanced my knowledge of electronics on a want-to-learn basis, no
demand, no pressure, no paycheck from an rf-related field, just the
self-satisfaction of increasing my knowledge and skills.

No matter what ticket you get, get one! And if you're on 30 mtrs look
for n4jvp

73 (best regards) de n4jvp

I believe this means that operator F2HE is operating under a
reciprocal licensing agreement in Guadaloupe, which has the prefix FG.

But I guess it used to be the other way around, something like F2HE/W2.
Some people still use this form and some don't.
What's the rule ?

It all depends on how much you actually like the idea of learning the code. If
it is something that is a good challenge for you then you will find it
interesting and learn quickly. If it is just a way to get on the air with
the benefits and you plan on not using it later, then it will be tough.
I personally never had a problem, I learned it when I was a Boy Scout.

1228. Address for VK3DBL needed

Newsgroup: rec.radio.amateur.dx
Date: 1998-04-16 00:00:00 UTC
From: "Robert G. Schaffrath, N2JTX" <rschaffrath@acm.org>

Source record: 29497

I need the current address for VK3DBL. The online databases WWW.QRZ.COM and WWW.BUCK.COM give two different addresses! I need to know which one is the most current. If anyone can check this against a 1998 flying horse and let me know...

TIA,
Robert, N2JTX

>How many weeks/months did you study it before you passed your code test?

Back about 40 years ago when I was 11 years old, I tried to learn the
code by myself with no teacher, and just a code buzzer. No success.
When I got to high school, joined a radio club and learned the code to
get a novice within 4 months with the help of my then radio mentor,
WA2OGC (where is he now?)
>

After getting to high school, about 20 to 25
>
>Anything special that you did to help you learn the code ?

Back in those days, we had code records (?!?!) and used a code
oscillator for live sending/receiving.

4 or 5. It has been 42 years and I was 14 at the time.

>What was the WPM of the test you passed ?

5 WPM

Got novice and used a straight key for 2 days. Went to bug and was
copying at 30 WPM in 2 months. Peaked at 50+ in the 60's to 80's and
now hard of hearing and comfortable at 30-35.

20-40

>
>Anything special that you did to help you learn the code ?

I didn't know it was supposed to be difficult. I was self taught w/
no tapes, machines, receivers, etc. Only desire, which for a 14 YO is
mighty strong.

Good luck!

When I decided to upgrade, I did three things. 1) I found another ham who had the same goal, so we had a half-hour sked every night, pushing ourselves to go a little faster all the time. 2) I used a code drill program on my computer. Nowadays I'd recommend Morse Tutor or Supermorse; they're great for learning. 3) I wrote a random groups program that ran on a Commodore VIC-20. I'd set it at about 25 wpm and do my best to copy (I was going for the Extra, so you might want to back down a bit). Supermorse does the same thing, I believe.

Between the three, I upgraded in about 3 months from a somewhat rusty 15 wpm.

Best of luck!

I suspect after all the initial "hullaballoo" subsides, both of these will turn out to be not all that rare. Especially if the DXAC backdates them to 1983 (there was a major DX-pedition there in 1989, and there have been a number of other ops from there in the last 15 years). Of course, for now, they're "new", so everyone wants to work them.

SB DX ARL ARLD015
ARLD015 DX news

This week's bulletin was made possible with information provided by Tedd, KB8NW, the OPDX Bulletin, QRZ DX, The 599Rpt, G4BUE and Contest Corral from QST. Thanks to all.

SRI LANKA, 4S. Denver, 4S7DA, is QRV on 20 meter SSB between 0000 and 0200z. QSL via W3HNK.

MADAGASCAR, 5R. Ake, SM7CIP, is QRV as 5R8FU. He is expected to be active for some time. QSL via SM0DJZ.

SPRATLY ISLANDS. Hans, DF5UG, is QRV as 9M6QQ. His length of stay is unknown. QSL to home call.

EASTERN MALAYSIA, 9M6. Keith, GM4YXI, is QRV as 9M6YXI from Besar Island, IOTA OC-133, until April 19. QSL to home call.

CORSICA, TK. F6AXX, F6IIE and F5MNW are QRV using CW as TK/F8UFT until April 18. QSL via F6AXX.

GUADELOUPE, FG. Alain, F2HE, is active as FG/F2HE until June. He plans to be QRV from Les Saintes, IOTA NA-114, from May 4 to 30. QSL via F6LQJ.

FRENCH POLYNESIA, FO. Bob, W6RJ, and Rob, W6KR, are QRV from the Austral Islands as FO0FI until April 20. Activity is on all bands, using CW and SSB. They plan to move to the Marquesas Islands next week. QSL via K6SLO. Kan, JA1BK, will be QRV until April 17 as FO0MIZ from the Austral Islands as well. This may be a new DXCC entity. QSL via VE3HO.

POLAND, SP. Frits, PA0FHG, and his xyl Jeanine are QRV until April 25 as SO8FHG. Look for them on 50110 kHz from a number of rare grid squares. QSL via PA0FHG.

SOUTH SHETLAND ISLANDS. Stan, SP3BGD, is QRV as HF0POL from Henry Arctowski Station on King George Island. He has been found on 160 meters around 0200 to 0500z. QSL via SP3SUN.

CHAGOS ISLANDS, VQ9. Jim, NS1L, is QRV as VQ9ZZ. His length of stay is unknown. QSL to home call. Chuck, VQ9KK, is also active and is generally found on 15 or 10 meters, using SSB. QSL via KB0QKK.

CAMBODIA, XU. Members from the Korea Telecom ARC will be QRV as either XU3MTM or XU7MTM from April 22 to 24. Operations are limited to 20, 15 and 10 meters, using CW and SSB. QSL via HL2AQN.

GIBRALTAR, ZB. Martyn, G3RFX, is QRV until May 8 as ZB2FX. He is using CW and SSB on 80 to 10 meters, with emphasis on 12 meters. QSL to home call.

THIS WEEKEND ON THE RADIO. The DXYL-NAYL CW and Holyland DX Contests and the Michigan QSO Party are all on tap for this weekend. Please see April QST, page 102 for details.

1237. The Real ham code

Newsgroup: rec.radio.amateur.dx
Date: 1998-04-16 00:00:00 UTC
From: Burt <burt@innocent.com>
Message-ID: <6h66dr$14o$1@as1000.javanet.com>
Source record: 29506
Cross-posted to: rec.radio.amateur.misc,rec.radio.amateur.dx

The Radio Amateur is:
CONSIDERATE...never operates in such a way as to lessen the pleasure of other's. (unless of course it is a contest).

LOYAL...Offers loyalty, encouragement and support to other amateurs, local clubs, and the American Radio Relay League, through which Amateur Radio in the United States is represented nationally and internationally. (unless of course money is involved or in many cases little support shall be given if the ham is old (almost always the case) and the new ham is young).

PROGRESSIVE...with knowledge abreast of science, a well built and efficient station and operation above reproach. (unless of course you have any money the you become an "appliance operator").

*FRIENDLY...slow and patient operating when requested; friendly advice and counsel to the beginner; kindly assistance,cooperation and consideration for the interests of others. These are the hallmarks of the amateur spirit. (unless of course it is a flea market (every man for himself).

BALANCED...radio is an avocation, never interfering with duties owed to family,
job, school, or community. (this is rarely true. A good contester will leave the family on Christmas if there were a contest, a local kid, known as "The breather" sits by his "hamradio" day and night talking to anything that comes along except of course a girl. Finally the only thing most hams will leave their "ham radio" for is a cup of C O F F E E.

PATRIOTIC...station and skill always ready for service to country and community. (unless there is DX around or a contest, in such cases it is accepted to ignore any emergencies).

Please visit my World Wide Web Site, you have never seen a page like it.

I wrote these comments to Mike yesterday via email, but after thinking about it, I felt they were worth posting.

If you're studying code, you may find this helpful:

Dear Mike,

I'm still putting all the information together for my article, but I'll share some things that I learned so far:

The Koch method is likely the best way for most people. However, there's no one and only one best way for all people. The basic rule I've found is: Use what works for you.

Working with Farnsworth code helps prepare you for the "faster" code. The letters all sound the same at 5 or 13 WPM using Farnsworth.

Just to let you know, I passed the 13 WPM last Saturday; which is why the other club members are hoping I'd write an article about learning the code. I did not learn the code quickly. I have a very poor memory and lack a sense of timing or beat. It took me 10 months to pass; however about 2 of those months I didn't study. So, you could say I worked at it for a total of 8 months. About 6 to 9 months seems to be typical time period for most people to reach 13 WPM.

The second rule I have about learning code is: Practice, Practice, Practice. (Every day and several times a day if possible.) One does not learn to play the piano by never touching it. In the same way as a piano, one must practice to learn any skill.

The third rule is: Little by little, one goes far. To reach 13 (or even 20) there are a lot of little gains along the way.

Now a work of warning, progress is never as quickly as we'd like it to be. Sometimes I encountered "mental walls" where my brain seemed to refuse to learn anything. The worst one I encountered lasted 2 1/2 weeks. It was at this low point where I almost gave up and joined No Code International. Some very good Ham Friends encouraged me during that time. So, I kept at it and at last broke through that "wall".

The last rule is: NEVER, NEVER, NEVER GIVE UP.

We live in an "instant everything" age. We want it fast and
easy. In many areas, I guess that's OK, but consider learning
the code a challenge. A few weeks back I was working mile marker
12 at the LA Marathon. Almost 20,000 runners ran past me, but
the one runner I'll never forget was this little old man.
His "run" was really a walk, but one thing was clear: Neither
old age OR the 26 miles was going to stop him from reaching
the finish line. The shear persistence and focus of that old
man impressed me more than any of the others in that race.

I'm sure that some day the code requirement for the HF bands
will be dropped and to get a General Class license will become
very easy. Still to those who get the license with needing
the code requirement, they will never know the feeling I
had when I keyed the mike on my HF rig and said, "This is
KF6JHG/AG . . ." I had faced the challenge and over came it.

73,

Bob

Hope this gets through - my server seems to be having some newsgroup problems.

My thanks to all of you who took the time to give me your opinions. The general consensus seems to be to go for General with Extra in mind.

It looks like I have some in-the-bed reading to look forward to.

Again, many thanks to all for their help.

St. Louis, MO

: them to 1983 (there was a major DX-pedition there in 1989, and there
: have been a number of other ops from there in the last 15 years). Of
: course, for now, they're "new", so everyone wants to work them.

Why would the DXAC "backdate" Australs and Marquesas to 1983, or even 1989? My understanding is that they would now qualify because the DXCC rules have been rewritten with respect to their eligibility. In other words ... they were not eligible before ... but they are now. Slightly different circumstances for H40 .. but the net effect is the same ... the rules are different as of April 1, 1998.

I think there was a pretty good explanation of the change affecting Australs and Marquesas on the DX reflector. Take a look/see at their archives for more info.

Hello Johnny,

A lot of the time DX stations wind up appearing on the same frequencies.
These frequencies are unofficially known as the "DX frequencies", and
RARE (we're not talking vanilla stuff here) DX often appears on
them. Sometimes (often, even), though, it DOES require some careful
bandscanning (or waiting for someone else to do it and put the DX
station on Packet Cluster) to find them.

It gets worse... he is a ham. He has his 5wpm, but he just does not like ham radio any more.

I agree however, it has nothing to do with DX, and (like 99.9% of his emails and newsgroups postings) it is completely ignorant, irrelevant, and a waste of cyberspace by someone who has no idea what he is talking about and whose sole purpose in life is to annoy people.

Ah.. but it really WASN'T a CHANGE that "qualifies" them. The issue was the GOVERNMENT status of French Polynesia (FO). The new rules have CLARIFIED what constitutes a country by reason of "Government". I say CLARIFIED because the previous rules were very vague and were applied inconsistently. The new rules have some hard and fast criteria (UN Membership/ITU Prefix Block/IARU Membership). The reason the islands were rejected for DXCC status in 1989 was because DXAC couldn't be convinced of the "Government" status of FO. The Marquesas and Australs were always far enough from French Polynesia, even under the old rules.

>first have a visual memory of the code, and then switch to sound....

If at all possible, this first step should be eliminated. Starting with visual symbols slows you down when you then go to aural symbols. In other words, if your brain is trained to translate the visual marks ._. into an R , then when you start with sounds your brain must first translate the sound didahdit to ._. and then translate ._. to an R .

The reason most folks hit a plateau around 10 wpm is because that is about as fast as your mind can cope with the double translation. Only when you can go directly from the sound of didahdit to R can most folks proceed past that plateau.

This is one of the keys to the Farnsworth method. By sending the individual characters at 15-20 wpm, you learn the sound from the very beginning. That is why most folks who start and stay with the Farnsworth method do not experience the typical 10 wpm plateau.

Other than that, the often-repeated key is practice, practice, practice. Even just ten minutes every day is better than an hour once a week.

Howdy johnny -- one of the best ways to catch DX is -- before anyone
else does and a pileup ensuses. This means tuning the entire band ---
and listen listen then listen some more. However -- a pileup is a sure
sign of a DX station already in operation. Also DX stations often favor
the 95's 14.195. 21.295, 28.495. There are "DX windows" and QRP calling
freqs and IOTA nets established thru common usage -- these can be seen
at URL:
http://www.utexas.edu/students/utarc/license/bandplan.htm

The online DX news typically publishes DX freq and skeds -- see URL:
http://pw2.netcom.com/~ac6v/page9.html

Avid DXers are on a local network of DX Packet stations where folks post
DX (real time and freq) 24 hours a day. Hunderds of DX spots are made
daily -- for a sample see URL:
http://pw2.netcom.com/~ac6v/page8.html

Also there are DX nets (same freq and time) --- see url:
http://pw2.netcom.com/~ac6v/pagep.html#DX

Finally there are DX newsletters by subscription with all the latest
news, skeds, freq etc.

Hope you enjoy your DXing

From 0 WPM to 30 WPM in just 2 months isn't as crazy as it may seem. Most of us won't even come close to learning it that quickly, but there are some who have all the right traits and learn VERY fast.

This should come as no surprise, we've all seen the kid(s) in school who could pick up the most complex math skills in record time, while the rest of us struggled to understand. Likewise others could remember all their lines in a play after a few readings, while the rest of us had to look at the script. . . .

Assume about 1/2 and hour to 1 hour of study every day. The fast learners can go from 0 WPM to 13 WPM (or even 20 WPM) in less than 4 months. The rest of us will take about 6 months to 10 months.

No mater how fast or slow one learns the code, the key is sticking with it. LITTLE BY LITTLE, ONE GOES FAR.

Assuming you know no code at all...

Ok.. U.S. Coast Guard Method (well it was 25 years ago anyway...)

Start with a set of flash cards.. morse one side, letters/numbers/symbols other side... when you can go the deck in 60 secs, then start listening.. there is something about the brain that makes it easier for most people to first have a visual memory of the code, and then switch to sound....

Start thinking in code... driving down the road.. translate road signs into code... advertisements on billboards, anything... us idle unproductive time to drill the code into your brain, the more you think code the more of a "reflex" it will become to translate it...

Then... just practice with supermorse or whatever you can get... start at 5WPM.. when you get that good.. jump to 8, 10, 13, 15 18, 20, 25.... always set your practice speed faster than you can copy.. as soon as you "pass" a speed (pretty much solid copy).. move up to the next speed.... (We practiced 4hrs a day with tapes in radio school, went from 0 to 25 in about 45 days... so repitition is the key :)

You'll hit "walls" at 13, 18, and 25+wpm... points where you go from copying characters, to character groups, to words..... at higher speeds the code starts to "sing" to you... it's a lovely tune...

Whatever you do don't get discouraged... all it takes to be good at morse code is practice... some learn it more easily than others.. but just about anybody can get it :)

I don't recommend on-air copying (except ARRL broadcasts) in the beginning... good code takes practice to send.. trying to copy poorly sent code can be frustrating and counter productive. Once you feel you have a good handle on the code say 10wpm... then try listening to other "fists" and try to identify a good fist from a bad one...
Don't expect your on-air copy to be as fast as practice tapes/programs... QRN/QRM and sending style's will reduce your ability to copy live code...

As far as sending is concerned... it is real important... get a good key, either hand key or electronic... hand keys require more effort on your part to send properly formed characters, electronic keyers will automatically keep your di's and dah's the proper length... character and word spacing are crucial.. probably the most common bad habit you can develop in CW is to run your characters/words together.. making it hard for the other operator to tell if you sent the word "sent" or "hk" :) ... to practice sending.. get a tape recorder.. tape what you send.. put it away.. randomly select a tape a week later and listen to it.. if you can copy your own code... it can't be too bad :)

See you on the air :)

Sounds like fun. There seems to be quite a lot of Landies amongst the regulars on GB3FF these days.

GB/M has been done a few times before, our club managed to get the callsigns GB400CU and GB400CU/M, - with the mobile station on a BR train on a BR line ! The train was a special service taking people to and from a specially erected temporary station at a national trust preserved village. George, GM2TW was a master at getting unusual permissions, and BR were friendly because he and the club had done a lot for the centenary of the forth rail bridge (special event stations at each end, and a /P walking across on one day).

Looking forwards to details and I'll try to work you.

Cheers,
David GM4ZNX & 4.6HSE!

Steve, I've got DL1WM in my notes as the manager I sent a card
to in March 98, not DL5WM. Might just be a typo; I'll have another
look at the manager lists. No response but it's only been a month.

I also sent a card, back in September 1997, to RW3AH for a QSO
with 9X0A; haven't heard anything from that, either. I was
apprehensive about getting cards in and out of Russia, direct.
Anyone else had luck via the RW?

At the risk of sounding ignorant, I am wondering how do you DXers make contact. I'm just getting started in radio and hope to upgrade and join you all someday, but I do know that the ham freqency bands can be a big place to try to locate a particular signal. Since no frequency was given, how do you find each other? If, for example, it was said "We'll be on 160 meters at 1:00 Zulu", seems it would still be a hunt to find it. Just wondering. Hello all, thank you for reading this.

A special event station will be operated by the Southside Amateur Radio Society Inc. to commemorate those who fought and/ or died in wars fought by the Australian and New Zealand Army Corps (ANZAC).

CALL SIGN - VI4ANZ

DATE - Saturday April, 25th 1998

TIME - 24:00 Hrs to 12:00 Hrs UTC (10:00am to 10:00pm Australian Eastern Standard Time).

FREQUENCIES - 3.570 mHz LSB
- 7.070 mHz LSB
- 14.220 mHz USB
- 21.270 mHz USB
- 28.450 mHz USB
- 29.650 mHz FM

All frequencies are +/- QRM. CW contacts will be available - please listen for on air announcements on the day.

A commemorative QSL card will be issued to all valid contacts. You may QSL via the Bureau (VI4ANZ) or QSL direct to: -
Attention: - VI4ANZ
Southside Amateur Radio Society Inc.
PO Box 294,
Woodridge, QLD 4114
Australia

PLEASE NOTE WHEN SENDING A QSL DIRECT: -

Within Australia, a stamped self addressed envelope will be required.
Overseas stations must provide one IRC and a self addressed envelope.

To our knowledge this is the only commemorative station of this kind in the world.

This event is proudly sponsored by the Returned Services League (RSL) Greenbank, QLD, Australia.

Apparently you don't and probably have never listened to the ham bands
or you will know you stuck your foot in your mouth. The solar cycle is
on the rise and 10m activity will rise along with it. If cb'ers want to
get on 10m, get a ham license, it's very simple to do. If there are
millions of CB bees(?) out there how come no one is on CB? I know no
one is on CB other than truckers because I actually tune across 11
meters now and then, do you? All it takes is passing a 5 word per
minute code test and 2 written exams to get on 10 meters legally. Have
you ever heard 5wpm code? It's just about slow enough to look up what
each dit-dah combination is. There are several very young people- 8
years old and up, that have passed the 20 wpm code test! If an 8yr old
can do 20 wpm, you would think an adult could learn to copy 5 wpm.
If you want on 10, get a license. 10-4 Good Buddy?

Bob, a partial (but certainly not total) solution is to try and use the "channelized" freqs favored by CBers. Call CQ on freqs in 10kc increments beginning with 28.005, 28.015, 28.025 etc. Part of the reason that CBers use the lower end of 10 meters is that it is quieter than the sometimes-trashed 27 mhz band, so a little activity may discourage at least some of them.

As various FCC officals have said that they are not bothered by hams who transmit over obviously illegal stations, I will sometimes call CQ in CW over some echoey, roger-beeping out-of-band CBer. (The digital modes are even more effective.)

I've read that the FCC has asked the radio importers to not sell easily modifiable ham rigs, with a threat that they may be outlawed in the future. But evidently the request has not worked, as converted 10 meter rigs are being sold widely, both in the US and the rest of the world.

I suspect the next sunspot peak will have even more pirates on 10 meters: there have been hundreds of thousands (millions?) of inexpensive easy-to-mod 10 meter rigs sold worldwide, most of which are never used on 10 meters. Typically a simple mod will allow TX over the 26 to 30 mhz range; all of these rigs put out twice the power (or even more) of a US CB radio, and they do not have the strict FCC type-acceptance standards of US CB radios.

Starting with Clear-Channel's Ranger AR-series in the mid-80s, which was followed by several Uniden models, then the RCI 2900/2950/2970 etc., the Emperor series, etc., the Asian radio makers have unleashed a tremendous problem for the ham community. In the past year I've seen ads from Copper Electronics for a sadly laughable rig: a 10 meter AM-only rig with a built-in echo box! Certainly all of these will be modded for CB, and none will ever show up on 29mhz AM.

Yes, converted 40 channel CB rigs, the occasional "export" CB have also been used by the 28 mhz pirates, but I strongly suspect they've been mostly replaced by the modded 10 meter rigs, due to their lower prices and easier conversions.

I freely plead guilty to "freebanding" with a modded Uniden 10 meter rig before I got my ham ticket! The majority of freebanders are responsible operators. But the numbers are increasing of the dirtballs who are using the lower end of ten meters.

Another ten meter problem with no easy solution is splatter from 27 mhz users. I've noticed that local hams running close to 1500 watts on 10 meters from legal ham gear and amplifiers will cause far less interference than a 27 mhz station running a claimed few hundred watts from a dubiously modded rig and cheap bootleg amp.

Some horrible mods are done to 27 mhz rigs in the name of "increased talkpower". Typically audio limiters are removed, which give the radio an overmodulated, bassy sound which is liked by most CBers, BUT also causes much more splatter, and stronger harmonics & spurs. Most "techs" that do these mods don't use typical commercial radio test equipment like spectrum analyzers.

When such a modded rig is used with the typically overpowered amplified mic and a bootleg amplifier, the results can be incredibly dirty, sometimes even interfering with six meters. Here in Santa Barbara, one 27 mhz freebander used to splatter enough to ker-chunk a six meter repeater with a 52 mhz input.

I have no easy solutions to the 11 meter splatter problem.. on one fairly recent occasion I informed a local CBer that he was interfering with 10 meters, and he simply did not care. I gather the FCC used to do much more 11 meter field enforcement, but evidently they don't have the funding to do as much as they did.

Well, this is getting long (and whiny!), so I'll close here. 73 and C U on the lower end of ten meters, fighting the QRM. DE KM6JE/Leigh Marrin in Santa Barbara, Calif.

The Radio Amateur is:
CONSIDERATE...never operates in such a way as to lessen the pleasure of other's. (unless of course it is a contest).

LOYAL...Offers loyalty, encouragement and support to other amateurs, local clubs, and the American Radio Relay League, through which Amateur Radio in the United States is represented nationally and internationally. (unless of course money is involved or in many cases little support shall be given if the ham is old (almost always the case) and the new ham is young).

PROGRESSIVE...with knowledge abreast of science, a well built and efficient station and operation above reproach. (unless of course you have any money the you become an "appliance operator").

*FRIENDLY...slow and patient operating when requested; friendly advice and counsel to the beginner; kindly assistance,cooperation and consideration for the interests of others. These are the hallmarks of the amateur spirit. (unless of course it is a flea market (every man for himself).

BALANCED...radio is an avocation, never interfering with duties owed to family,
job, school, or community. (this is rarely true. A good contester will leave the family on Christmas if there were a contest, a local kid, known as "The breather" sits by his "hamradio" day and night talking to anything that comes along except of course a girl. Finally the only thing most hams will leave their "ham radio" for is a cup of C O F F E E.

PATRIOTIC...station and skill always ready for service to country and community. (unless there is DX around or a contest, in such cases it is accepted to ignore any emergencies).

Those 10m freqs down at the bottom of the band are CW not phone. So
if you hear someone talking they are illegal. Might be a great place
to put some 10m cw beacons. General class and higher only.

February 20, 1998
Dear President Stafford,
You have not responded to my letter of September 27, 1997 where I questioned why I was removed a VE. I have not violated any provisions of 97.525 or any other aspect of F.C.C. regulations that govern this hobby. Thus unless you restore my VE status FORTHWITH I shall send the following letter to newspaper editors throughout the country (on a staggered basis). This is a threat. I believe fully in what follows. The only reason I have not written this letter before was I was not motivated to actually send it.

Dear Editor,
There was a time when amateur radio provided a public service in training operators for military service, technicians for industry, fostered international goodwill and carried emergency communications. This rarely is true any longer. The technology has long ago left hams by the roadside. Today amateur exams are so simple children who can barely read can pass the test. All questions AND the answers are published in multiple choice format. The examinee knows the actual questions and answers ahead of time. The average age of today's ham is well over 50 whereas when I was first licensed the average age was 27. Hams are still communicating at 1200 baud when internet users fly along at 40 times that speed. As far as international goodwill, most hams rarely ask a foreign station anything more than what his equipment is, they do not care about culture, lifestyle or anything that really matters. Hams usually want the "credit" for having talked to 100 or 200 or more foreign countries (did you know both Hawaii and Alaska are separate "ham" countries?). If you have a scanner listen to frequencies between 145 MHZ-148 MHZ and listen to the content of the conversation. These are valuable frequencies that other public service and commercial interests could use PRODUCTIVELY. Cell phones have replaced the need for most emergency ham communications in this country. Hams use many other frequencies for little more than a discussion of personal medical ailments. Hams are required to serve the public but in fact they are serving themselves almost all the time. Worse they cause interference to other services (like your TV) and they erect large towers and guess what, there is nothing you can do about it. The F.C.C. is too underfunded to respond to citizen interference complaints and the ham radio lobby (American Radio Relay League) has caused both state and federal governments to pass laws that prohibit towns from controlling these
large antennas.
The frequencies that hams use are for the use of everyone not their personal fiefdom. It is time Congress conducted hearings and investigated whether ham radio has become the vast wasteland (a term that former F.C.C

commissioner Newton Minow popularized).

1275. GB4OWR - 40th Anniversary of WAMRAC/WACRAL

Newsgroup: rec.radio.amateur.dx
Date: 1998-04-18 00:00:00 UTC
From: Peter Jackson <peter@g0ppq.demon.co.uk>
Message-ID: <pyxwNJAPsOO1Ew70@g0ppq.demon.co.uk>
Source record: 29246
Cross-posted to: uk.radio.amateur,rec.radio.shortwave,rec.radio.amateur.misc,rec.radio.amateur.dx

Join us in celebrating our 40th Anniversary of WAMRAC/WACRAL the
World Association of Christian Radio Amateurs & Listeners.

Location:
Newsome South Methodist Church, Berry Brow, Huddersfield, West
Yorkshire, England

Date:
5th, 6th and 8-10th May 1998

Proposed operating frequencies +/- QRM will be:

3.747 MHz 7.047 Mhz 14.333 Mhz 18.133 Mhz 21.350 Mhz (or above)
28.333 Mhz operation also intended on 2m. Times of operation subject to
propagation and operators.

Newsome South Methodist Church at Berry Brow in Huddersfield is to host
the fortieth anniversary celebrations of the foundation of the WORLD
ASSOCIATION OF CHRISTIAN RADIO AMATEURS and LISTENERS with a special
amateur radio station and a gathering of enthusiasts in May.

Using a unique radio callsign 'GB4OWR', specially uissued by the
authorities to the organisers of the event, Christian amateurs will
operate short wave transmitters from the church location on 5th and 6th
of May and over the weekend of 8th-10th May. They will be speaking to
fellow 'hams' around the world.

During the week of celebrations, WACRAL members supported by today's
local radio clubs from Denby Dale and Halifax, will be teaching pupils
of the Berry Brow Primary School all about the magic of radio and will
be showing the Church Youth Club how it all works.

Publicity for this most unusual event has already gone out in the
amateur radio magazines and stations around the world are eager to
contact GB4OWR during its short four day life and to obtain the unique
confirmation of contact card, known as a QSL card, for their personal
collections.

Forty years agom, the Rev. Arthur Shepherd of the then Methodist Salem
Church in Huddersfield, started a unique movement to encourage Christian
fellowship through the medium of amateur radio. The Rev. Shepherd was
himself a 'ham' with his personal callsign of G3NGF and spent much of
his spare time talking to other amateurs around the world. He was also
a founder member of the Huddersfield South Methodist Radio Club - G3LQK.

In 1957 the club was invited by the World Methodist Council to become the prototype for a possible development of Methodist amateur radio clubs around the world. The Council would sponsor the launch of a new Association of Methodist Hams and the Rev. Shepherd was invited to become the organiser.

The World Association of Methodist Radio Amateur Clubs proved to be an outstanding success. In 1978, the Association became the World Association of Christian Radio Amateurs and Listeners, bringing into membership amateurs from all denominations and to include short wave listeners as well as officially licenced amateurs.

Mr Harold Turner, G4YRH of Halifax and principal organiser of the celebrations, says "WACRAL now operates around the world and is actively engaged in pursuing that orginal idea of using radio to project 'Christian Friendship and Fellowship . . . Worldwide. Our members meet regularly over the air and, here in the UK, enjoy fellowship every Sunday morning before church over a nationwide link-up".

"We are currently engaged in a project to assist a remote school in Uganda to learn about radio communications and, eventually, to obtain a licence to operate a school station themselves. Senior members are engaged in councilling distressed radio amateurs who turn to us for help and are proving singularly successful in their professional lives with Christian broadcasting, the installation of solar powered radio links in Third World countries and the moral support of amateurs in the missionary field".

"WACRAL is looking to the future and is already engaged in activity on the World Wide Web, surely an amzing result of the far sighted ideas of the Council and the Rev. Arthur Shepherd".

Okay Bob, you've convinced me to try Koch. My dream goal is to DX on QRP but to do it, I need the code and I want to make it the medium for communication. Now my problem:

I have an older 386 with a math co-processor, a 1200 baud modem and my Windows 3.1 doesnt work anymore because my mouse port got re-directed somehow. I can't download and I can't run windows.

How can I get SuperMorse or another similar program that will run from DOS? I would gladly pay for it. I've already spent $80 on a MFJ generator, $20 on code tapes and $35 on a straight key and I'm not doing so good.

I got my no-code tech license last week and intend to pass my general theory exam next month. I'm hoping that I'll learn the code and pass the 13 wpm sooner than a year! (I put off the hardest to last)

Will someone sell me a copy of a Koch program? I have both 5.25" and 3.5" drives. I originally started on this in 1959 and now retired, have determined to get my license and DX with the guys on the CW bands or bust.

Hi Everyone

Ok, this question is not Rocket Science .... but I need a answer.

I live in a apartment in Toronto and have the following problems with
normal radio reception.

1) AM public radio stations are not received well enough.
2) I would like to receive a weak station on 99.5 MHz and there is a strong
local station on 99.9.

I find my computers make a lot of interference that is propagated on the
mains
power line which in turn makes the radio(s) less than ideal for AM. My
walkman seems
a bit better but not near the computers.
The apartment is north facing and the above mentioned 99.9 weak station is
in the south.

Questions:
Can someone suggest possible solutions to my problems short of getting a
big Yargi antenna?
Can someone suggest a good 'normal' radio receiver that is selective on FM?

Thanks
(I am studying towards my Novice Ham exam)

>Temotu, Heard, Willis, Kingman, Spratley, Chatham....

But aside from Wake in that group, how many have available
mains power? As I attempted to make very clear, places with
available mains power are typically also places with available
vehicles. And if you're on some godforsaken rock, you're going
to have to deal with the lack of mains power by providing your
own. It seems to make sense to me that the power you provide
should be 12 VDC instead of 110 VAC that you then have to
lug along a power supply to convert to 12 VDC. Often, the
vehicle that transported you there can provide that power.
In other cases, there are available 12 VDC generating sets
from Miller and others which would serve admirably.

There may be good reasons to carry along AC power generators,
and power supplies to convert it to 12 VDC, but I'm trying to get
people to think outside the box a bit on this. And it is good preparation
for emergency operation too. Places you're likely to be when an
emergency occurs may not have 110 VAC generators to run your
mains power supply, but they are likely to have vehicles which can
supply you with copious amounts of 12 VDC.

I could hardly agree more. I quit trying to enjoy ham radio in 1987.
Between 1973, when I became a ham, and 1987, when I packed away my
equipment. I think I had maybe 5 interesting conversations on ham radio.
The absolute, unvarying banality of ham conversation on both the low bands
and two meters never ceased to amaze me. These were presumably intelligent
people! They couldn't successfully pursue such an advanced technological
hobby if they werent! Yet they were as incapable of speaking intelligently
with each other on topics other than their health or their rigs, or of
exercising even the minimum imagination necessary to make human contact
with foreigners, as if they were children--or CBers. It took me years to
understand that this limitation was really an integral part of the ham
experience (I'm a slow learner.) Once I did understand this, I switched to
computers and then the internet, where usenet makes possible occasional
thoughtful and interesting exchanges (in between the cancerously-spreading

sex ads).

Even more interesting - YOU can transmit wherever necessary, in an
emergency. It does not matter if you have a license for the frequencies.

: Based on Gary's description about the real emergency that just happened in
: Atlanta, I'd say, yes, that's EXACTLY the problem - they COULDN'T tell the
: difference.

I don't think that Gary's post implied that. They most probably could tell the difference - it is rather obvious. The problem was that they could not adapt to the completely different requirements for emergency operations.

I suspect the primary difference is: In a contest - you talk all you can. In an emergency - you only talk when you have to. It is hard for a lot of people to remain silent when they have a microphone in front of them.

so what ??

the vast majority of people in the world are NOT interested in DXing
on CB. Moreover on 10m on CB.

what's your problem ?? if someone is a ham and purchases a ham gear,
then it is not a problem to use 10m but otherwise not ??

your are a typical person who tries to kick the bees out... and
helping destroying the ham radio.

it's better to be active [freq]. if they just want to say CQ when
no one listens (like nowadays... too busy with the internet etc.),
just let them do so.

Half of contesting is talking. The remaining half is listening (and interpreting). Contesting is about hearing correctly, interpreting correctly and moving on to the next QSO. It is also the logistics of knowing when to be on which band. Finally, most contesters are not contesters only.

Johnny, do you have web access? Do a search for AC6V, and try
his website--there's a fantastic collection of information there,
and I'd be surprised if there wasn't a shareware DOS Morse
program or two. I'd guess one of the ham software CDs that
are sold at hamfests would have them, too. It's NOT going
to be impossible to find one

If that doesn't work, email me privately--I've got one somewhere
on an old disk; it may take me a while to FIND it, but it's
around somewhere. Good luck! 73!

Yes. I'm sure that they could tell the difference, but in the stress of the
situation they fell back on their training. That's perfectly normal. And
their training was primarily to make the contact at all costs, even if that
means stepping on others who might have more important traffic. As
Dave Heil said in another meassge, a contester can't afford to wait if
he wants to win. That's deeply ingrained through years of training and
practice.

Cutie Boy (cute@radiotelephone.net.ham) wrote:
: so what ??
:
: the vast majority of people in the world are NOT interested in DXing
: on CB. Moreover on 10m on CB.
:
: what's your problem ?? if someone is a ham and purchases a ham gear,
: then it is not a problem to use 10m but otherwise not ??

"Cutie Boy", in your .sig you give two ham calls, VA2QRU & VE7JPN, which in the QRZ database, both come back to a Masataka Noda. So you evidently are a licensed ham, whom I assume has had at least some on-air experience, probably on VHF or UHF repeaters.

How would you feel if your favorite repeater had a decades-long problem of interference by unlicensed operators? You studied hard to get your license (perhaps with some langauge barrier problems) and spent several hundred dollars to get a decent FM rig. When you tried to use your hard-earned privileges & equipment, you would feel the same frustration I feel sometimes when trying to use the lower end of 10 meters.

Without widely followed band plans and gentlemen's agreements (like that of most 11 meter freebanders who will not go above 28.00 mhz) radio is not a useable medium of communication.

A few jerks have used high powered gear on 49mhz: how'd you feel about not being able to use your convienent cordless phone?

How'd you like to be in a plane/jet landing at night in a storm at a crowded airport, and the pilot is having trouble copying the control tower because of bleedover from CBers using dangerously splattering amps? (This has happened.)

Were you ever in an emergency situation, how'd you like to have the police or fire department or ambulance delayed, because some jerk is jamming the public safety channels with a modded VHF/UHF ham rig, or stolen police/fire rig? (This has happened.)

: your are a typical person who tries to kick the bees out... and
: helping destroying the ham radio.

By calling CQ over an illegal signal, I'm destroying ham radio??? I'd say you are doing more to destroy ham radio by ignoring interference problems with your "so what?" attitude.

: it's better to be active [freq]. if they just want to say CQ when
: no one listens (like nowadays... too busy with the internet etc.),
: just let them do so.

"No one listens"?? 10 meters is starting to have more DX stations as we get closer to the sunspot peak, and there ARE a lot of legal stations who are trying to work them, and are being interfered with by illegal operators.

"Just let them do so"?? If your favorite repeater was being trashed by unlicensed stations, I'm certain you would feel differently.

This was so well done - thought I'd pass it along. Its form a top SD contester N6KI.

>Dennis,
>I have been trying to work some of the dx stations on CW that are
>working split and am not having much luck finding where they are
>sending. I go up and down the area where they are sending and still
>can't find them. Any ideas?
>
>John Bower
>N7KI
>
>

John,

First of all, I assume you meant to say you can't find the last freq that the DX station LISTENED on as he works the pileup which 99% of the time is UP from his TX freq. If he is smart, he will listen at least 1 or more kHz up lest he have guys call too close to his own TX freq and wind up cover himself up with QRM from all the LIDS that are calling "in the blind" while he is TXing !

Let me see if I can explain how I did it
with my TS-940. (With my TS-950 and 2nd receiver, I can now
listen to the pileup simultaneously and just tune
the 2nd rcvr for the last guy sending back to the DX station!)

1. Put the DX station on VFO A

2. I Hit A=B (Both VFOs on same Freq now)

3. I Hit "SPLIT" Button (I intend to TX on B to call guy)

4. I try to find the last guy the DX station worked
by doing following:

As soon as the DX station sends "N7ABC 599", I depress the
T-F button which now puts the 940 receiver on VFO B,
I tune the dial (usually UP, starting 1 to 2 kHz away from
the DX station and through the pileup which is usually
spread over 5 to 10 kHz) trying to hear someone sending "599"
which is usually the guy working the DX station unless 2
(or more) other dummies came back to the DX station thinking
it was them he was working.
Usually it is a clean QSO and the only guy sending 599 is the actual

US station working the DX.

Note: Be sure to stop tuning when you release the T-F button so
you don't inadvertently move VFO A and lose the DX stations calling
freq!!

I let off the T-F button leaving VFO B now ready to TX on the last
freq the DX station was listening to and I now listen for the DX
station to sign off with the US guy by usually sending "TU" or
"TU P5ABC" (TU and His Call....P5....Sure!!!).

At that precise moment I send my call if I am a guy that can bust
pile-ups with my big signal. If I'm not a big gun, I pull the tail-end
trick and hesitate til the first blast of the pileup subsides then
zing my call in.

I pay strict attention by running QSK***, not to be transmitting if the
DX station is, that is, he went back to someone else, or you of course.
So as soon as he starts sending I STOP TXing IMMEDIATELY unlike 90%
of the lids that don't have a clue that continue calling...
Hey!, If the DX station is TXing, HE AIN'T LISTENING FOR ANYONE
AND CAN'T HEAR YOU!!!!!

If you practice trying to find the last guy the DX station worked by
honing in your timing on WHEN and HOW LONG to push the T-F button
you will finally learn how not to be TXing when the DX station is.

I am amazed at the amount of stations who are calling the DX station
while the DX station is TXing, they don't have a clue, so they park on
one freq and just keep TXing until they hear the DX station come back
to them!!!! Yes, it does work at times but it generates QRM for the
poor DX station that has already decided who to go back to and really,
only wants THAT specific station to TX back to him at that moment.

AND MOST OF THE TIME THESE ARE GUYS WITH EXTRA CLASS LICENSES !!!!!

***If you don't have a rig that does QSK then be sure to set your
TX Keying (Usually VOX) Delay to make your RX come back on as
soon as possible so you don't wind up TXing while the DX station is!

OK, now suppose you get real good at finding the last guy the DX station
worked but everytime you call, he doesn't come back to you.

Well, either you just ain't strong enough the bust the pile-up
on that freq(Check to see if the DX goes back to someone else
on that exact freq) or Sometimes the DX will work the next guy
a bit up or down from the last guy he worked, you can tell as you
hear the "599" return calls from the US guys creeping Up or Down from
the
last US guy you spotted sending "599".

In this case you got guesstimate how far up or down the Dx station
is moving on after each QSO and move VFO B that amount and call there.

I hope this makes sense. You may have to practice tuning in pileups
on stations you don't need to work or you already worked just
to get the art of finding the US guy who, is sending 599 as you
tune VFO B thru the pileup.

Let me know if this helps

73, Dennis N6KI

Doug, were we discussing dangerously reckless, speeding drivers, we would be wasting our time by dwelling on the majority of speeders who only go a couple of MPH above the speed limit and otherwise drive responsibly.

While "freebanding" is illegal, the section of 27.405 to 27.700 has almost no legal users worldwide, and the majority of its illegal users have reasonably clean signals and don't interfere with 10 meters. Compared to the unlicensed jerks who trash the lower end of 10 meters, the majority of freebanders are "responsible."

Well put. Unfortunately... "...they don't have a clue, so they park on one freq and just keep TXing until they hear the DX station come back to them!!!!"

There's altogether too many "they"'s. It's easy to work DX split if you can hear the guy he's working & call just off that frequency. Unfortunately, if the entire pileup is calling continuously, you can't ever find the guy he's working!

(while on that subject, why is it the "UP" stations never learn?! You'd think after decades of chastising in print & on the 'Net, they'd know they're generating more QRM than the people they're complaining about. Come to think of it, maybe the "UP" stations are intentional jammers?)

When I decided to get my ticket, I went at it full speed.

It took me 1 week to learn the code and study enough to
pass the written. I used The Gorden West book and tapes
from Radio Shack. I passed both first try. I passed my Tech
about two weeks later.

It took me about 5 months before I felt ready for the General Code.
I failed it twice, third time was the charm. I then passed my
Advanced about a month later. It took several years before
I became commited to passing the Extra. My wife was studying
for her General and I couldn't let her catch up on me. So I started
listening to code again. It had been a long time since I had used
it and had to learn some of the letters over again. I should point
out, when I passed my 13 WPM I was lucky. It took about two
months before I felt ready for my Extra. I listened to tapes I made
of W1AW and the ARRL 13 - 22 WPM tapes. I worked as a
computer programmer at the time and would listen to them at
work. I spent several hours per day listening. I felt pretty
confident about my code speed when I finally took the test. Since
I have a stong background in electronics I was not too concerned
about the written. I had reviewed the questions a few times and
felt pretty confident. Well, my wife passed her General code and
written. I passed the Extra code but failed the written twice. I
then studied like I should and passed the Extra written a week later.

My wife used the Code Qwik tapes and swears by them. She has not
used code since passing her General. We have since moved and I
have not put the HF station back on the air. I hope to soon. She is
eager to try her had at the key.

Message-ID: <6hfj4u$682$1@camel29.mindspring.com>
Source record: 29429

You guys were everywhere on 17, 15, 12, and 10 but hard to work on SSB on 20, 40, and 75. Why???? You come up too late for the East Coast USA on the low bands and are not there on 20 at any reasonable hour.

For low band work (including 160) the best hours are 0930 to 1100. In the past 5 days only one spot on 160CW before 1100 and none on 75 or 40 SSB. These are the best hours for W4 and even if we hear you after 1130Z on 40 most of us are gone to work as this is 8:30AM We can work FO on 40 as early as 0530Z and 0630 on 75.

As for 20SSB I looked thru all the internet packet spots for the times we hear you best 0300Z and 1000 to 1200Z and nothing. I did hear FO0FI between 0600 and 0800Z (20 April) on 14200 but not working stateside Sigs were 58 to 59+10. I called twice and was told to standby.

Please try and work the East Coast on 160CW and 75 to 20 SSB from FR0FR.

Recap:

160 meters 0930 to 1100
75 meters same time
40 meters 0600 to 1200Z
20 meters 0300Z and 1000 to 1200Z 2200 to 2300Z is also possible.

Thanks in advance

Dave K4JRB

So you think that radio operators can only be trained to operate under one set of circumstances? A contester who has trained himself to operate a certain way at contest time cannot have also trained himself to operate in a completely different mode under vastly different conditions? This goes back to your old saw of "Pavlovian" conditioning. That's fine for puppies, but contrary to your evident opinion, you aren't the only ham who doesn't possess a dog's intellect. Ask any public safety communicator how he shifts gears when the ship hits the sand.

> So you think that radio operators can only be trained to operate under one set of
>circumstances? A contester who has trained himself to operate a certain way at
>contest time cannot have also trained himself to operate in a completely different
>mode under vastly different conditions?

Richard has this one absolutely correct. I know many contesters who are excellent emergency operators (including emergency net control stations).

As I have been following this discussion of Contesters vs. Emergency Ops, I have been struck by the foolishness of the idea that people can only do one thing well. We all should know better. We train ourselves to do what is important to us and to accomplish what we enjoy. I've known bankers who are great golfers, and ministers who are cabinetmakers in their spare time -- and if they run into a problem, these latter don't preach at the wood or take a hammer to their members.

Even working on radio communications, we work in a "mindset" according to the kind of work we are doing. If you are rag-chewing (CW, SSB, RTTY, or whatever), it's a different mindset from contesting, which is still different from emergency operations.

Now this is not to say that every contester makes a good emergency operator -- nor does every ragchewer or PRS operator. It is not important what your preferred pleasure operation is, but what you have trained yourself for and prepared yourself to do.

Stereotyping and generalizations accomplish nothing.

The best emergency operators are those who have practiced and prepared to handle emergencies. Period.

> and two meters never ceased to amaze me.

Did it ever occur to you that it takes two to make a conversation? It's not new to bow out whenever the content of the exchange gets so light as to be uninteresting, but I've frequently been surprised what a seemingly unrelated comment by me brought out of the other party and what interesting "threads" it sometimes led to. Frequently other hams join in who were just monitoring when the interesting stuff started, and who now find reason to join in.the proceedings. This frequently leads to extensive roundtables that go on for some time, interesting all the way, on most any subject you could think of. Don't blame ham radio for your own shortcomings as a conversationalist.

One of the most interesting on-the-air groups I get into is headed up by a fellow who is a wheelchair quadriplegic, has very limited usage of his upper extrremities and still builds amplifiers and tuners. He is also an accomplished machinist and gunsmith, and is knowledgable in a wide variety of subjects. Throw a comment out for this crew and it draws anything but dull responses....There are a lot more people like that on tha air than you evidently could imagine.

-
-73. --Leigh Marrin/KM6JE.

Illegal is illegal regardless of how "responsible" these people are.
Would it make it any better if a burglar picks up the broken glass
and puts it in the trash after he burglarized your house? Wasn't
he acting "responsibly" by cleaning up the glass so you wouldn't
step on it? It is amazing how some people, licentious as they are,
try to cloud the issues by unrelated arguments.

Then the argument goes -- well their in that space between CB and
10-meters so let's leave them alone. What about that burglar who
breaks into your neighbor's house? He's not hurting you so leave
him be, right? Well, what if he gets your house next? It's the
old "he's not hurting ME" argument. Well they are hurting the
hobbies. Look at how many hams get falsly accused of interference
because of an illegal CB operator. I've been there, done that.
I even had a neighbor call the police because my tower was interfering
with his telephone. (there were no antennas on the tower yet) It
turned out to be a CBer two blocks away.

If these people were "responsible" they wouldn't be doing something
illegal.

Hi Leigh,
Masa, better known as Cutie Boy and a couple of other names is a young man going to school in Canada from his home country Japan. Cutie Boy's goal in life is to troll the amateur news groups with totally off the wall statements that make no sense. Other than being an internet troll he does not seem to have any real activity in ham radio. Most of the folks on the news group have learned to just ignore his outburst.

Cutie Boy's time here is probably limited. If his grades in school are anything like his participation here, he will soon flunk out and be on his way back to Japan.

Johnny:

It's easy, but you need web access for a brief time (if you don't have
web access at home try your local library). First go to
http://griffy.nmt.edu/sara/sara/finley.morse.html
for David Finley's excellent discussion of the Kock/Farnsworth method.

Second, Dave's detailed discussion of using the Kock/Farnsworth method
with Supermorse can be found at
http://griffy.nmt.edu/sara/sara/finley.sm404.html

Lastly, if you like what you have read, you can download the latest
version of Supermorse directly from Lee Murrak's (the author) page:
http://www.murrah.com/sm/
It's shareware, so if you like it you are encouraged to send the author
a small fee. Also, it's a DOS program, so you will probably be ok
computer-wise.

If you can't do any of the above, drop me a line and I will be happy to
snail-mail you a disk with a copy of Supermorse.

Good luck and 73,

Mike banz, KB3CDH

I've had considerable higher amount of interesting QSO's, several QSO's
with LA7MI or LA6VM on 80/40m ssb lasted over 5 hours, I might even had
many interesting 2m FM QSO's, even some on repeaters!!!

>Conversation is a two-way street. If you have nothing to offer, chances are
>you will get nothing in return. It's that simple.

it is perhaps not too difficult to find somebody to make an interesting
conversation with, the problem is all the breakers (read: Intruders),
interrupting an interesting conversation without having anything to add
to the discussion. I usually overhear intruders, but unfortunately the
opposite stns does not.

Still remember a G-stn I worked on 144320 some 20 years ago, we had so
much to talk about, but so many angry stns waiting to work to LA

I agree 100%, don't understand why either, they must know when the East Coast Gray Line is?? If not any Sat. tracking program will tell them. I have worked them once on 40m CW 0944z and they were S8 to S9 here on a inverted Vee at 40 feet. But haven't heard them on 40SSB or 20m that it wasn't too late. When they have been on 20m the Mid West & West Coast have been to hard to punch through.

Contest Club Finland (CCF) "presents" again!

CONTEST / DX-MEETING in Helsinki (Espoo) FINLAND
on Saturday, 9-May-1998 (by Contest Club Finland)

Starring N6TJ/ZD8Z/D44BC, H40AA, H40RY, BA1A . . .

Hosted by Nokia Radio Clubs OH1AV, OH2AV, OH2AW, OH6AAH, OH8AV

Address: Nokia-house, Keilalahdentie 4, Espoo (about 10 km west from
Helsinki centrum)

12:00 - 12:20 Welcome!
Nokia Group's amateur radio clubs OH1AV/OH2AV/OH2AW/OH6AAH/OH8AV &
South China Sea DX Team (OH1RX)

12:20 - 12:40 Nokia Corporation presentation

12:40 - 12:50 Contest Club Finland's words (OH6YF)

12:50 - 13:00 Ville's words (OH2MM)

13:30 - 14:30 Contesting seriously for 40+ years! Optimum age of
winning the amateur radio contest? (Jim Neiger, ZD8Z/D44BC/N6TJ)

PAUSE - coffee/tea and sandwiches

15:00 - 15:30 H44RY - WPX 1998 SSB (OH1RY)

15:30 - 17:00 H40AA - "Temotu - the brand new DXCC country"
What happened and how it all was done?
"Live"-pile-ups, feelings, etc. (OH1RY,OH2BH,OH2TA)

PAUSE

17:15 - 17:45 OJ0/OH1VR - IARU 1997 DX pedition to Market Reef
(OH1VR/video-tape)

17:45 - 18:00 BA1A - 1997 -->... (OH2BH)

18:00 - 18:45 Contest Club Finland "in action" (OH1EH) :

CQ 160m 1997
WPX 1997
CQ WW 1997
CQ 160m 1998
WPX 1998
Plaques/trophies
etc.

QSY to Hotel Rivoli (about 1 km from Nokia-house)

19:00 - 24:00 Spontaneous eating, drinks, "rag-chewing" etc. @ Hotel Rivoli, Otaranta, Espoo

For more information contact Pasi Luoma-aho OH2IW/OH6UM :
tel.: +358-(0)400-436543 (mobile)
e-mail: a) OH2IW@sysopen.fi b) OH2IW@sral.fi c) OH6UM@sral.fi

If you need accommodation, a good choice could be Hotel Rivoli Espoo, which is planned to be the "rag-chewing" place for the evening (address: Otaranta, 02150 Espoo, located about 1 km from the CCF-meeting place.) With the "code" 'CCF Contest Meeting' one can there obtain a special room rate; FIM 510 for a double-room, FIM 410 for

a single-room!

For room reservations at Hotel Rivoli, phone +358-(0)9-435811, fax +358-(0)9-466693
Check also http://www.rivoli.fi/ewww/indexe.htm (on the map you can see both "Hotel Rivoli" and "Nokia")

*** NOTE! ***
If you are coming to the meeting, please tell that immediately to Pasi OH2IW/OH6UM by phone or by e-mail. (Thanks!) (E-mail address and phone number shown above.)

The above information can be found also on the www-pages of Contest Club

Finland at
http://www.contesting.com/ccf

Cu in Espoo, 9-May-1998

1338. Re: What ham radio is today.

Newsgroup: rec.radio.amateur.dx
Date: 1998-04-21 00:00:00 UTC
From: k5dh@rtis.ray.com
Message-ID: <6hi69t$m1u@sf18.dseg.ti.com>
Source record: 29457
Cross-posted to: rec.radio.amateur.antenna,rec.radio.amateur.boatanchors,rec.radio.amateur.digital.misc,rec.radio.amateur.dx,rec.radio.amateur.equipment,rec.radio.amateur.homebrew,rec.radio.amateur.misc,rec.radio.amateur.policy,rec.radio.amateur.space

Why is this drivel posted to the "boatanchors" discussion group?
What does it have to do with discussing classic tube-type gear?
Shouldn't this kind of thing be posted to the "policies" group?

Dean - K5DH

Sorry I can't. BR68 specifically excludes messages 'for the benefit of
any religious organisation'. Or are you suggesting that there is no
benefit in what you do, in which case why waste power and bandwidth?

Don't get me wrong, I've nothing against Christianity, or any other
religion. It's just that Amateur Radio is about radio, not personal
faiths and credos.

The legal method, according to FCC regulations is operating location followed
by call sign, e.g., W2/F2HE. It is also legal to apply an operator chosen
suffix. So, for example is W2/F2HE wanted to indicate that he/she was
operating mobile, it would be perfectly legal to sign as W2/F2HE/M.

Back in the "good old days", i.e., during my initial ham activity, before a
long sabatical, we didn't have reciprocal licensing, so it was not an issue as
far as foreign calls were concerned. However, since at that time your area
indicator actually meant something, and you had to have a call sign indicating
your home location, there was a requirement to indicate portable operation by
signing with the operating area number as a suffix. So, when I first moved to
Texas, before I obtained a W5 call, I had to sign K4MMW/5. (I kept my operator
license assigned to my original home location, since it was still a family
home, and obtained a second station license, W5PQZ, which is why now I am
again K4MMW. My choice is rather obvious when you send the two on CW.)

Thinking back, we may have had reciprocal licensing with Canada, even then,
and I believe portable foreign operation was indicated with a suffix rather
than a prefix. Help me out OTs.

Randy - K4MMW

Randy Thomson

From: v.coletti@iol.it
Message-ID: <353d314d.18390785@news.mclink.it>
Source record: 29468

On April 23, from about 7 to 18 UTC, a new Vatican City State
station will be activated, on the occasion of the Second Lateran
Open Day.

It will transmit from the Pontificia Universita' Lateranense,
the Pope's University.

The station's qrz will be HV5PUL.
Please note that this is the first HV5 station ever.

QSL to:
HV5PUL
Pontificia Universita' Lateranense
00120 Vatican City

HF activities will be on 80, 40, 20, 15 and 10 meters and perhaps
also a bit on 17 meters. Stress will be on 20 and 40 m.
There will be two HF stations on air at the same time, in phone
and CW. No RTTY for this time.
Since the expedition has been organised very quickly, do not
expect outstanding signals... but we will do our best.

There will be two other stations, one operating on 6 meters and
the other on 2 m (I think only phone on these bands).

The group operating this station is composed by IW0DJB, station
manager, and a group of Rome radio amateurs: IK0OER, IK0WRB,
IK0NKI, IK0FTA, IK0YQJ and others.

Vinicio Coletti - http://www.webcom.com/vcoletti
vcoletti@webcom.com

I'd say you were unlucky, I've been licensed since 1965, built many pieces of
equipment, synthesized multiband transceivers, test equipment like a spectrum
analyser module and the like. I never owned a commercial rig until 1992 when I
saw them at a price Stateside that was hard to pass up on.
Over the years I've had skeds with many parts of the world, seen a few of those
I worked when on my travels. I even had a good long chat with the skipper of a
Varig 737 flying between the Capital of Amazonas State and Recife. It depends on
what interests you have, I enjoy chats on general things, airplanes (sexiest
things on 3 legs), radio and lots more, I shun the computer chats except with
people I know, the ones who will go on about how wonderful Windoze XX is and
it's outstanding packet software, poor blokes salivating over Microdro$$
operating systems.
Anyway, got a CT-2 to fix and get packet back on the air and if it stops
raining, get drilling a wall to pur that 2m antenna up above the roof.
One day soon I hope we can make the jump to 56K packet and shift some real
stuff, we keep moving an inch at a time modifying ex-PMR stuff, but think we
need to build from scratch.
Regards

Is your IMD station going to be operating Baudot-RTTY mode ?
If so, on which HF bands?

GL es 73s,
Vince

Hello:

I am located on Long Island, which I know is part of the IOTA NA026
group.

Must I be a member of IOTA club, if one exists, in order to qualify
for giving out points for stations that work my station: WA2RSX?

Is it ligit for me to sign WA2RSX/NA026 on the air to give out points?

That's because you failed to ask the right questions - you failed to show the other operators you were interested in conversing with them. Did you ask about their military experience? Did you ask if they had any patents? Their profession? What books they'd recently read? Their thoughts regarding solar or steam power? Chess? Did you try to learn *anything* from and/or about the other fellows? Once you find the what the other person is interested in, you'll gain quite a bit of knowledge in an area that you possibly knew nothing about prior to the QSO.

Look for a speciality net to check into, such as the old Astro-Net which used to be on 3885 kc - amateur astronomers in their backyards all peering at the same celestial body through their telescopes (with a name like Moonman, you would have fit right in...). Call CQ CHESS to hook up with another chess player. Turn down your power to say, 1 W, and try for the Thousand Mile Per Watt award (or the 10,000 MPW award).

Geez, the list is endless. Your problem is that you have no imagination! It's no wonder your QSOs appeared so boring to you; I can imagine how the other fellow felt!

That is incorrect.

VE3HO is the QSL manager for FO0MIZ (op JA1BK).

However, "foofi" (Austral) and FO0FR (Marquesas) are via K6SLO.

Wrong! It goes to K6SLO. VE3HO is manager for FO0MIZ, an entirely
different operation.

DX Bulletin 16 ARLD016
From ARRL Headquarters
Newington CT April 23, 1998
To all radio amateurs

SB DX ARL ARLD016
ARLD016 DX news

This week's bulletin was made possible with information provided by Tedd, KB8NW, the OPDX Bulletin, Toshi, JA1ELY, Paul, N0AH, Bernd, DJ1TO and Contest Corral from QST. Thanks to all.

TUVALU, T2. Members of the Yamato ARC will be active from April 25 to May 1. Look for T22JY/JA1JQY, T22KJ/JA1KJW, T22KT/JA3MCA and T22VE/JA8VE on 160 through 6 meters, SSB and CW. QSL via home calls.

FIJI, 3D2. Following their stint on Tuvalu, the Yamato group will be active as 3D2HI/JA1KJW, 3D2KZ/JA8VE, 3D2SH/JA1JQY and 3D2TK/JA3MCA on May 2 and 3. Check 160 through 10 meters, same frequencies as during the Tuvalu operation, but no 6 meters.

LORD HOWE ISLAND, VK9. Paul, N0AH, will operate VK9LZ from April 25 to 30, concentrating on the newer bands. QSL via home call.

SAINT PAUL ISLAND, CY9. Dan, K8RF, Geoff, W0CG and Ken, WA9S will begin operations on May 28, including a Multi-Single entry in the CQ WPX CW Contest May 30 and 31, using the callsign CY9/K8RF during the contest. Individual operators will use callsign/CY9 outside the contest. They plan to concentrate on 160, 80, 40 and the newer bands before and after the Contest. QSL via operators home calls.

MARQUESAS ISLANDS. (French Polynesia), FO. Bob, W6RJ and his son Bob, W6KR, will be active until April 28 as FO0FR from Nuku Hiva Island. Activity is on CW and SSB on 160 through 10 meters. This is a possible new DXCC entity. QSL via K6SLO.

SPECIAL EVENT STATION. A memorial S56 Guard Red banner submarine, located at the Russian Navy base in Vladivostok will take to the air waves April 25 and 26 for Submarine Memorial Radio Reactivation Day. Check 7040, 14240 and 21240 kHz for SSB and 7010, 14040 and 21040

kHz for CW. The callsign used may be RS56M. QSL and SWL reports go to RW0MM, P.O. Box 73, Vladivostok 690090, Russia.

CAMBODIA, XU. Harv, XUF2B, has been very active this past week on RTTY on 20 and 15 meters. Check around 14085 and 21085 kHz. QSL via N4JR.

BARBADOS, 8P. Baerbel, DL7UTO, and Bernd, DJ1TO, will operate until May 5 using the calls 8P9IU and 8P9IR. QSL via home calls.

Terry, VR6TY, reports that all amateur radio stations from Pitcairn Island will switch over to their new prefix, VP6, on May 1, 1998.

THIS WEEKEND ON THE RADIO. The DXYL-NAYL Contest, CW, the Helvetia Contest and Ontario QSO Party are on tap for this weekend. Please see April QST, pages 102 and 103 for details.

1374. Kenwood Mic. Conn/Switch

Newsgroup: rec.radio.amateur.dx
Date: 1998-04-23 00:00:00 UTC
From: CARL DOMANICO <cmd-dell@worldnet.att.net>
Message-ID: <6hohc7$lfu@bgtnsc02.worldnet.att.net>
Source record: 29295

Wanting to Buy :

Hi, I bought a used Kenwood MC-60A Amplified Desk Microphone
Which I intend on using with my Kenwood TM-741A Triband Mobile Radio
144/220/440. However, it seems that I need a couple of other items made
by Kenwood
to make this work, the way I want it to. One item is the Kenwood MJ-88
Modular to 8 Pin Microphone Adapter. The other is a Kenwood MJ-89
Modular Microphone Switch. This allows Connection of Two Kenwood
Microphones, using Modular Plugs, to one Radio, with a Switch to select
either Microphone.

I would appreciate any and all input on this matter. If someone can give
me a method of buying lets say a Switch from Radio Shack with associated
parts needed to accomplish this without getting these items from
Kenwood, that would also be appreciatedï¿½.To buy just these connectors
and Switch new from AES or
Some Mail Order House..is Prohibitive based upon the cost of the
Microphoneï¿½.all help Appreciated !!

Thanks a Lot

Carl Domanico N2MFW

>I know your going to laugh at this but where are these two located. I've
>worked them both but still don't have in the log there locations.

FO0FI was active from the Austral Islands, a potential new DXCC entity
due to the rule changes effective 1 April 1998.

FO0FR is active from the Marquesas Islands, another potential new DXCC
entity due to the rule changes effective 1 April 1998.

QSL both via K6SLO (ex-WA6SLO).

FO0MIZ was active from Marquesas first, then moved to the Australs. I
don't have the exact dates off the top of my head.

The rule changes make it appear that FO/French Polynesia will be
considered a Point 1 DXCC entity. If that is the case, then the
distance limits are satisfied for both Australs and Marquesas to
become new entities.

From: ed@juge.com
Message-ID: <6hq2aulcf1@nnrp1.dejanews.com>
Source record: 29300

I thought I had that mod, but just looked and I don't. I used that function
on a 2400 I had several years ago. If you find it, be very very careful.
Run in low power is safest. If you're on a very active frequency, almost
continuous duty can cause most radios to get far too hot to touch.

Ed

1400. STRAW POLL (RFD): rec.radio.amateur.* "Vote of Confidence"

Newsgroup: rec.radio.amateur.dx
Date: 1998-04-26 00:00:00 UTC
From: pschleck@novia.net
Message-ID: <6i1238$481$1@newscene.newscene.com>
Source record: 29321
Cross-posted to: rec.radio.amateur.antenna,rec.radio.amateur.boatanchors,rec.radio.amateur.digital.misc,rec.radio.amateur.dx,rec.radio.amateur.equipment

***** DON'T PANIC!!!! *****

***** READ ENTIRE MESSAGE FIRST!!!! *****

The following message is an announcement of a 30-day discussion period on news.groups to precede a non-binding opinion poll which, depending on the results, MAY lead to a formal Request for Discussion (RFD) to reorganize the rec.radio.amateur.* newsgroups. NO VOTES ARE BEING TAKEN AT THIS TIME, and any binding vote that affects the rec.radio.amateur.* newsgroups will not occur for many months into the future, if at all. Please read the entire announcement carefully before replying or following up.

rec.radio.amateur.* Vote of Confidence

Contents:

Q: Who is doing this?
Q: How may I join the rra-wg?
Q: Why are we doing this?
Q: What are we doing?
Q: More to the point, why are we "kicking over this hornet's nest?"
Q: Why do you want to change the newsgroups again?
Q: Who are you to tell us what to do with "our" newsgroup?
Q: How long ago were each of the rec.radio.amateur.* newsgroups created?
Q: Why are the non-rec.radio.amateur.* newsgroups rec.radio.info and rec.radio.swap included in this proposed opinion poll?
Q: Where can I obtain a copy of the original newsgroup charters?
Q: Where can I find out more information about the Usenet RFD/CFV process?
Q: I don't want any of the newsgroups to change. What should I do?
Q: I want to go back to one single newsgroup for amateur radio on Usenet, like we had back in the 1980's. What should I do?
Q: I support some of the newsgroups for amateur radio, but not others. What should I do?
Q: I support the existence of a newsgroup, but disagree with its charter. How should I vote?
Q: I would like new newsgroups to be created, what should I do?
Q: I have no opinion, what should I do?

Q: Who is doing this?

The rec.radio.amateur.* Working Group (rra-wg@theporch.com, which initiated the last major reorganization in 1993) is the point-of-contact

for questions about this proposed opinion poll. Principal members are Paul W. Schleck, K3FU, and Jeffrey Herman, KH2PZ. Though not an rra-wg member, Gary Coffman, KE4ZV, also endorses this proposed opinion poll. The proposed opinion poll will be conducted by an unbiased third party from the Usenet Volunteer Votetakers (UVV), Jeremy Billones (billones@primenet.com).

Q: How may I join the rra-wg?

Anyone who volunteers may join the rra-wg. The rra-wg has always solicited volunteers from when it was created in 1993 (originally named rra-reorg) to draft an RFD to reorganize the rec.radio.amateur.* newsgroups (and continues to serve as an advisory group for FAQ maintainers and new newsgroup proponents). You may join the rra-wg by subscribing to its mailing list.

The automated list manager address is

listproc@theporch.com

Use this for subscribing, unsubscribing, getting archived info, getting the FAQ message, changing your address, etc.

To subscribe, send a message to this address with "subscribe rra-wg <your name>" Similarly, to unsubscribe, replace "subscribe" with "unsubscribe"

The list owner address is

listown@jackatak.theporch.com

Use this address only when there is a problem which really truly can't be resolved otherwise.

Q: Why are we doing this?

Discussion on the rec.radio.amateur.* newsgroups shows that there is a difference of opinion about the current newsgroups and their charters. Assertions on one side of the argument that the charters were voted upon by the readers have been countered with assertions on the other side that the votes took place years ago, by a very small minority of the current readership. There is also the strongly-held opinion among some that we have "too many newsgroups." The following is a sample posting from the discussion thread on rec.radio.amateur.misc that led to this proposed opinion poll (the entire thread may be viewed at DejaNews, http://www.dejanews.com/):

Q: What are we doing?

As a preliminary (and perhaps even diverting) step to an RFD (which would be very laborous and time-consuming, and perhaps unnecessary), we propose to conduct a Straw Poll, or "Vote of Confidence" (similar to the vote of confidence for a Prime Minister made by British Parliament, or a non-binding resolution of the U.S. Congress). We do it Usenet-vote style (utilizing a neutral vote-taker from the UVV) with an RFD and Call For Votes (CFV) period. During the RFD, we have discussion pro and con about each newsgroup and its charter. During the CFV, a vote is taken where a "Vote of Confidence" yeah or nay for each newsgroup, as currently constituted and chartered, is given by each voter (YES/NO/CANCEL/ABSTAIN votes are valid).

What votes mean:

YES: I support the existence of this newsgroup and its charter

NO: I believe that this newsgroup's existence or its charter should be reconsidered in a future RFD/CFV

CANCEL: Delete any previous votes I made concerning this newsgroup

ABSTAIN: I have no opinion concerning this newsgroup

Each newsgroup that does not pass a vote of confidence by Usenet voting standards (2/3 and 100 vote majority of YES versus NO votes) may be referred to the Usenet newsgroup creation process where their deletion or modification (based on a rough consensus of the 30 days of discussion and how much they lost in the vote of confidence) is proposed. Each newsgroup that does pass a vote of confidence will have its charter, and justification for existence, reinforced to the readership (as the current readership voted on it).

Q: More to the point, why are we "kicking over this hornet's nest?"

Sometimes hornet's nests can get big enough that they wind up falling down anyway. As shown in the thread above, there are significant undercurrents of disagreement over the current newsgroups, their charters, and even the suggested guidelines and rules of net-etiquette that many on the newsgroups advocate. If the proposed opinion poll shows strong agreement with current practices, then that would help reduce (though not eliminate) newsgroup arguments on the subject. If, however, the proposed opinion poll shows strong disagreement, then it's probably better that we know that right away, and take steps to fix the current situation before it degrades any further.

Q: Why do you want to change the newsgroups again?

Only some of the proponents of this proposed opinion poll wish to change the newsgroups. Some wish to simply have the current newsgroups and their charters reinforced. All of the proponents agree that an up-to-date opinion poll of the readership is desirable at this time. Whatever future actions will be taken will be determined by the results of this proposed opinion poll.

Q: Who are you to tell us what to do with "our" newsgroup?

One answer is that on Usenet, no one "owns" an unmoderated newsgroup. Newsgroups are voted into existence by a democratic process to determine consensus (and lack of significant objection) for using shared network resources to support them. All of the existing rec.radio.amateur.* newsgroups passed such a vote at some time in the past, and should pass such a vote again if there is strong support for their continued existence.

Another answer is that this is just a non-binding opinion poll of the readership to determine a consensus, if any, for making changes. It would still be necessary to undertake a formal RFD/CFV process to change any Usenet newsgroup (and that was always possible, anyway).

It should also be emphasized here that no individual rec.radio.amateur.* newsgroup is being singled out. Rather, a consensus of the readership concerning ALL rec.radio.amateur.* newsgroups is being sought.

Q: How long ago were each of the rec.radio.amateur.* newsgroups created?

1972 (or possibly earlier, this date is when UCSD joined the ARPANet):

Info-Hams (original ARPANet mailing list at Simtel-20, continues today
at UCSD as a gateway of rec.radio.amateur.misc)

1979:

Creation of Usenet News at Duke and UNC

early 1980's:

fa.info-hams (fa = "From ARPANet") *
net.ham-radio (pre-Kent Paul Dolan "Great Renaming") *

mid 1980's-1991:

rec.ham-radio *
rec.ham-radio.packet *
rec.ham-radio.swap *

1991 Reorganization:

rec.radio.amateur.misc
rec.radio.amateur.packet *
rec.radio.amateur.policy
rec.radio.cb
rec.radio.swap

1992/3 Addition:

rec.radio.info

1993 Reorganization:

rec.radio.amateur.antenna
rec.radio.amateur.digital.misc
rec.radio.amateur.equipment
rec.radio.amateur.homebrew
rec.radio.amateur.misc
rec.radio.amateur.policy
rec.radio.amateur.space

1996 Additions:

rec.radio.amateur.dx
rec.radio.amateur.boatanchors

* = obsolete

Current newsgroups covered by this proposed opinion poll, and the years
in which they were created:

rec.radio.amateur.antenna (1993)
rec.radio.amateur.boatanchors (1996)
rec.radio.amateur.digital.misc (1993)
rec.radio.amateur.dx (1996)
rec.radio.amateur.equipment (1993)
rec.radio.amateur.homebrew (1993)
rec.radio.amateur.misc (1991)

rec.radio.amateur.policy (1991)
rec.radio.amateur.space (1993)
rec.radio.info (1992/3)
rec.radio.swap (1991)

Q: Why are the non-rec.radio.amateur.* newsgroups rec.radio.info and rec.radio.swap included in this proposed opinion poll?

Though one level up in the rec.* hierarchy, these newsgroups are principally used by readers of rec.radio.amateur.*, and their fates would substantially be decided by any significant reorganization of the rec.radio.amateur.* newsgroups. Though created by a rec.radio.amateur.* reorganization, rec.radio.cb is not included in this proposed opinion poll.

This announcement has been cross-posted to all rec.radio.* newsgroups (except for rec.radio.broadcasting and rec.radio.info, which are moderated). In addition, the following individuals were consulted prior to this announcement (note that consultation does not necessarily imply endorsement):

Richard Eckman, KO4MR, Proponent of rec.radio.amateur.dx
Brian Kantor, WB6CYT, Administrator of Info-Hams/Ham-* mailing list gateways of rec.radio.amateur.* newsgroups at UCSD
Ian Kluft, KO6YQ, Proponent of 1993 rec.radio.amateur.* reorganization, former rec.radio.amateur.* FAQ Maintainer
Jay Maynard, K5ZC, Proponent of 1991 rec.radio.amateur.* reorganization
Brian Short, K7ON, Moderator of rec.radio.info
Rick Stealey, K2XT, Proponent of rec.radio.amateur.boatanchors

Q: Where can I obtain a copy of the original newsgroup charters?

ftp://ftp.uu.net/usenet/news.announce.newgroups/rec/rec.radio.info
ftp://ftp.uu.net/usenet/news.announce.newgroups/rec/rec.radio.amateur-reorg
ftp://ftp.uu.net/usenet/news.announce.newgroups/rec/rec.radio.amateur.dx
ftp://ftp.uu.net/usenet/news.announce.newgroups/rec/rec.radio.amateur.boatanchors

Q: Where can I find out more information about the Usenet RFD/CFV process?

ftp://rtfm.mit.edu/pub/usenet/news.announce.newgroups/How_to_Create_a_New_Usenet_Newsgroup
ftp://rtfm.mit.edu/pub/usenet/news.announce.newgroups/How_to_Format_and_Submit_a_New_Group_Proposal
ftp://rtfm.mit.edu/pub/usenet/news.groups/Guidelines_on_Usenet_Newsgroup_Names

Q: I don't want any of the newsgroups to change. What should I do?

Express your opinions on news.groups (the default followup newsgroup for this message) and vote "YES" for all of the existing rec.radio.amateur.* newsgroups when the proposed opinion poll occurs (in 30 days time).

Q: I want to go back to one single newsgroup for amateur radio on Usenet, like we had back in the 1980's. What should I do?

Express your opinions on news.groups, and vote "NO" for all (or all but one) of the newsgroups when the proposed opinion poll occurs.

Q: I support some of the newsgroups for amateur radio, but not others. What should I do?

Express your opinions on news.groups, vote "YES" for any newsgroups that you wish to remain unchanged, and vote "NO" for any newsgroup you wish to have reconsidered in a future RFD/CFV when the proposed opinion poll occurs.

Q: I support the existence of a newsgroup, but disagree with its charter. How should I vote?

Since the proposed opinion poll is for both the existence of given newsgroups AND their current charters, you should express your opinions on news.groups and vote "NO" for that newsgroup when the proposed opinion poll occurs. Again, this is a non-binding opinion poll simply to determine if current newsgroups should be considered for modification or deletion, not a vote to actually modify or delete these newsgroups.

Q: I would like new newsgroups to be created, what should I do?

Creation of new newsgroups is not being considered by this proposed opinion poll. A future RFD/CFV would have to be initiated to do this. You are, of course, welcome to express your opinions concerning new newsgroups on news.groups.

Q: I have no opinion, what should I do?

You may wish to read the following 30 days of public discussion on news.groups about this proposed opinion poll to develop your own opinions. Discussing your resulting opinions on news.groups may help further develop your opinions, or those of others.

If, after reading and participating in the public discussion, you still remain undecided, you may choose to abstain from the proposed opinion poll. You may do so informally by not participating in it at all, or formally by explicitly voting "ABSTAIN" for all of the newsgroups when the proposed opinion poll occurs.

Watch for an announcement of the STRAW POLL (CFV) in about 30 days. Questions to rra-wg@theporch.com.

Try 7.100 -7.150
Usually, foreign broadcast makes the novice portion of 40 meters
rather hard to copy.

I usually find that 7.105 thru about 7.118 to be fairly quiet, as well
as 7.140 thru 7.150.

Just jump in there and call CQ.

1406. CORRECTION: Send STRAW POLL Discussion to rec.radio.amateur.misc

Newsgroup: rec.radio.amateur.dx
Date: 1998-04-27 00:00:00 UTC
From: pschleck@novia.net
Message-ID: <6i32lhioj1@newscene.newscene.com>
Source record: 29327
Cross-posted to: rec.radio.amateur.antenna,rec.radio.amateur.boatanchors,rec.radio.amateur.digital.misc,rec.radio.amateur.dx,rec.radio.amateur.equipment

Based on thoughtful feedback from Kathy Pascoe (kpascoe@ford.com) and Yves Belleveuille (yan@storm.ca) on news.groups, I've come to the conclusion that rec.radio.amateur.misc would be a better followup target for this straw poll discussion.

I sent the original copy (complete with exact headers) to several experts, including past newsgroup proponents and our volunteer UVV votetaker for review a week prior to posting, but unfortunately no one (including me) noticed that a followup to news.groups might generate controversy. As helpful as the standard FAQ documents on newsgroup creation were, they weren't (in my opinion, at least) sufficiently clear regarding the inadvisability of conducting informal meta-discussion on news.groups. It's also sometimes hard to figure out what's appropriate on what newsgroup by observing others. According to Kathy and Yves, news.groups is an appropriate target for discussion in response to a formal Usenet Request for Discussion (RFD), but informal pre-RFD discussion (including straw polls) should probably be conducted in an appropriate home newsgroup.

Since more than one person has offered this feedback, and in a thoughtful and convincing manner, I'm posting this correction, and asking that followup discussion on this straw poll (which should commence, as scheduled, in 30 days time), go to rec.radio.amateur.misc.

Hi Fetter -- our packet cluster sez VK9LZ is Lord Howe Island in zone
CQ 30 -- ITU 60

Prefixes can be found at URL:

http://www.ac6v.com/pagev.html#PR

Several to ckoose from.

For a map of Australia and Lord howe Island -- see URL:

Look to Springfield Ohio if Dayton fills up. You will need transportation,
but its only about 30 minutes out...TOPS....Cake if you have a rental car.

Hi again Fetter -- also you can find DX info in the web DX newsletters
at URL:
http://www.ac6v.com/page9.html

From the ARRL Newsletter (ARLD016: DX news) a quote:
"LORD HOWE ISLAND, VK9. Paul, N0AH, will operate VK9LZ from April 25
to 30, concentrating on the newer bands. QSL via home call."

Hope these help.

Good DX and 73

Good luck ! We have openings in Muncie, only 90 miles away :)

Seriously, this is pretty difficult. 2 years ago, we took a room on a lark,
but we got the LAST room in a hotel
about 40 miles away. It's worth it though, I don't know where you're coming
from, but if you haven't done dayton
before, it's a blast, and you can't bring enough money :)

Hi all;
This is sorta dx related, I want to get a new
rig this month..old rig ic-725......looking at
ic-756-----Why is the price going fm 1999 to 2400???

ts570D---should I get one now at 1200 or wait and get
the 570d/g? also is there a problem with the present 570d?

ft-920---don't know but I'm interested in it also.

any help greatly appreciated, especially any thing I
shud ask of the hro/aes salespeople???

tnx Jim kw3u
and pls reply direct as maybe
this isn't the best newsgroup to post. although
certainly the most knowledgeable. tnx

>

After having put off learning Morse Code for almost 40 years, I
finallydecided to give it a try. I started learning Morse Code in November
1997.
I passed the 13 WPM code test 23 December, 1997. I passwd the 20 WPM
test March 21, 1998. It's now April and I can copy 25 WPM pretty well and
35 WPM doesn't sound like QRN to me anymore. :-)

> What's your estimate as to the total number of hours you spend studying
> before you passed ?
>

Initially, I practiced about an hour a day in 15 minute increments taking
abreak of at least 1/2 hour between sessions.

> Anything special that you did to help you learn the code ?
>

I used the excellent HAMU software available at www.crick.com/hamu,
to learn the letters. I set the character rate at 15 WPM and then practiced

at 5 WPM and 15 WPM whenever I thought I was getting good -- that
kept me humble. :-)

Once, I had (more or less) learned the characters, I started listening to
ARRL
code practice tapes, W1AW broadcasts and some live QSO's. I am now
of the opinion that listening to live QSO's too early may be detrimental to
learning, since many operators do not send perfect code and while learning
it is important to get the perfect rhythm of the letters firmly imprinted on

your long-term memory.

My personal list of does and donts is:

1. Do use computer software to learn the characters initially.

2. Don't move to a new character until the one you are learning
is firmly impressed on your long-term memory. That means
that you recoginze the character immediately, without hesitation,

otherwise you haven't really learned that character yet.

3. Do practice spelling words in morse code while you are waiting
to fall asleep.

4. Do keep your practice sessions short.

5. Do practice often.

6. Don't listen to live QSO's until you can accurately copy W1AW or
code tapes.

7. Do keep a positive attitude. Learning CW is fun.

8. Don't get discouraged -- you will learn it -- even though, at first, it
seems
like it will take forever.

9. Do listen to code tapes while you drive and try to form the words in
your mind without writing them down.

10. Do move on to the next higher speed as soon as you can copy
about 75% at your current speed.

11. DO listen to the code tapes at a faster speed than the test you are
taking while driving on your way to take the test. Then when you take
the test it will seem slower than it would have.

Steve its not exactly share ware. But this program is the most
affordable. I downloaded the demo and bought it that day. Its the best
in my humble opinion. And no - I work for Boeing. Not the log plus guy
, Im just a very satisfied user.

1427. Dummy load question

Newsgroup: rec.radio.amateur.dx
Date: 1998-04-29 00:00:00 UTC
From: David Kao <david_kao@hp.com>
Message-ID: <354758E0.2327@hp.com>
Source record: 29348

I found a couple of big dummy load blocks in an electroincs surplus store today. They are about 8"x8" and about 12 to 15 inches deep. They weigh about 10 to 20 lbs each.

These dummy loads are made by Bird, scraped by US Navies. The connector on them are big, something like 1 inch in diameter. No frequency info on them. One of them has a hand marked "500 watts" on it.

Anyway, I am just wondering what dummy loads these are. They look pretty clean. They might be good for HF or even VHF. I am thinking of getting one of them and convert the connector for my HF use. Good dummy load is hard to come by.

Does anyone have any idea what these dummies might be? I think I am going to go there again tomorrow. If the DC resistance is right in the 50 ballpark then I am willing to toss the $40 to get one of them.

Any info these dummies might be is much appreciated.

Regards,

David

Hi Art -- AS is a prosign for "standby or wait" where HI is the
"telegraphic laugh".
For a list of cw abbreviations and prosigns as well as the RST SYSTEM,
INTERNATIONAL EXTENSIONS, and ABBREVIATED NUMBERS -- see URL:

http://www.ac6v.com/pageo.html

A fairly extensive list of morse characters including the rare ones such
as apostrophe, parenthesis, underline, umlaut and many more can be found

Cross-posted to: rec.radio.amateur.homebrew,rec.radio.amateur.equipment,rec.radio.amateur.misc,rec.radio.amateur.dx

I was thinking about constructing a multiband adaptor for the TT Scout.
Something that would accomodate all my 7 band modules
(80-40-30-20-17-15-10) in a box, with a band selector switch. Quick and
easy band switching that way. Anyone think/try this yet? Also, what
about homebrew/modded modules for 6M, or a second/remote VFO?
I would think at least the module box would be quite do-able. Comments,
suggestions, warning all gratefully accepted.

DX Bulletin 17 ARLD017
From ARRL Headquarters
Newington CT April 30, 1998
To all radio amateurs

SB DX ARL ARLD017
ARLD017 DX news

This week's bulletin was made possible with information provided by Tedd, KB8NW, the OPDX Bulletin, Rick, N1RL, The 599Rpt, QRZ DX, 425DXnews, The Daily DX and Contest Corral from QST. Thanks to all.

AGALEGA AND SAINT BRANDON ISLANDS, 3B7. A group of Swiss amateurs plan to operate as 3B7RF from May 6 to 17. Activity is expected on all bands, including VHF, using CW, SSB, RTTY and SSTV. QSL via HB9RF.

LIBYA, 5A. Ahmed, 5A3YAZ, is QRV from Gharyn City. QSL via EA5XV.

MALDIVES, 8Q. Paul, ND4X, will be QRV as 8Q7DF from May 3 to 10, using only SSB. QSL via Lorenzo Tabaracci, PO Box 142, I-54033 Carrara MS, Italy.

IRAN, EP. Hamid, EP3HR, has been QRV on 18127 khz around 1500z. QSL via I2MQP.

TROMELIN ISLAND, FR/T. Henri, FR5ZQ, is QRV as FR5ZQ/T. He is active using CW and SSB, and has been found on 15 meters around 1700z. His length of stay is unknown. QSL to home call.

NORTHERN IRELAND, GI. Special Event Station GI6YM is QRV until year end in celebration of the 75th Anniversary of the YMCA Radio Club. Activity will be on 80 to 10 meters using CW and SSB. QSL via K1WY.

LIECHTENSTEIN, HB0. Oreste, IK3VIA, will be QRV until May 3 as HBO/N7OV. QSL to home call.

AMERICAN SAMOA, KH8. Larry, AH8LG, is QRV using SSTV. QSL direct.

SWEDEN, SM. Look for Special Event Station 7S5BE to be QRV until year end using CW and SSB. QSL via bureau.

ICELAND, TF. KE8RO and KC8CSD are active until May 5. They are signing KE8RO/TF on 80 to 10 meters, using CW, SSB and RTTY. QSL to home call.

LORD HOWE ISLAND, VK9L. Paul, VK9LZ, has begun operations. He has been found on 80 meters around 0930z. QSL via N0AH.

INDIA, VU. Marc, ON4AVO, will soon be QRV as VU3MCV, using CW for now and eventually SSB. QSL via ON7LX.

VANUATU, YJ. Tada, JA1WPX, is QRV until May 5 as YJ0AWP, using RTTY and SSB on 80 to 10 meters. QSL to home call.

ASCENSION ISLAND, ZD8. Paul, ZD8V, and ZD8T are QRV and have been found on 17 to 10 meters between 1545 and 2000z. QSL ZD8T via AC4IV. QSL ZD8V via KF4OOX.

THIS WEEKEND ON THE RADIO. The ARI International DX Contest, Connecticut QSO Party, Danish SSTV Contest, MARAC County Hunters CW Contest, Massachusetts QSO Party and the Ten-Ten International Net Spring CW QSO Party will certainly keep contesters busy this weekend. Please see May QST, page 96 for details.

1441. GB4OWR 40th Anniversary

Newsgroup: rec.radio.amateur.dx
Date: 1998-05-01 00:00:00 UTC
From: Peter Jackson <peter@g0ppq.demon.co.uk>
Message-ID: <ObHpnQAkNXS1Ewsu@g0ppq.demon.co.uk>
Source record: 29362
Cross-posted to: uk.radio.amateur,rec.radio.shortwave,rec.radio.amateur.misc,rec.radio.amateur.dx

Dear Friends,

WAMRAC/WACRAL celebrating it's 40th Anniversary Year shall be on the air
during the following periods.

On Friday, 8th. and Saturday 9th. May:- UTC/GMT times -

0600 - 0700 14.333 MHz
0700 - 0745 3.747
0815 - 0930 7.045 - 7.050
0930 - 1100 14.333
1230 - 1330 21.350
1600 - 1800 28.333
1800 - 1900 21.350
Any later times as bands permit on the given frequencies.

Sunday, 10th May:- The usual Sunday a.m. U.K. WACRAL Net
0700 - 0800 3.747
with no planned transmissions afterwards for the
Special Event Station to be dismantled.

For the sake of children of the neighbouring school, the station will
be in use on Tuesday 5th & Wednesday 6th when the 3.747 frequency is
to be used between 0900 - 1100 and 1230 - 1430 although other bands may
be used briefly.

For earlier times or later times on these two days, the frequencies
assigned for Friday and Saturday can be used.

NOTE: All planned frequencies +/- QRM

73s & 501 to all

1446. List of the rec.radio newsgroups

Newsgroup: rec.radio.amateur.dx
Date: 1998-05-01 00:00:00 UTC
From: jeffreyh@Hawaii.Edu
Message-ID: <6ib7fp$9do@news.Hawaii.Edu>
Source record: 29367
Cross-posted to: rec.radio.amateur.digital.misc,rec.radio.amateur.dx

```
Archive-name: radio/personal-brief-introduction

In an effort help ensure a poster's article reaches the appropriate
audience, below is a list of the rec.radio newsgroups. In most cases,
a group's name will explain its purpose. Cross-posting should rarely
be necessary.

rec.radio.broadcasting (devoted to the broadcast industry; moderated)
rec.radio.cb
rec.radio.info (periodic informational bulletins; moderated)
rec.radio.scanner
rec.radio.shortwave
rec.radio.swap (for buying, selling, and trading; not a discussion group)

rec.radio.amateur.antenna
rec.radio.amateur.boatanchors (tube-type communications equipment)
rec.radio.amateur.digital.misc (packet, pactor and other digital modes)
rec.radio.amateur.dx (long-distance amateur communications)
rec.radio.amateur.equipment (questions, comments regarding commercially-
built amateur gear; not for buying/selling)
rec.radio.amateur.homebrew (devoted to home-building ham gear)
rec.radio.amateur.policy (issues include code, restructuring, local
restrictions in conflict with FCC R&R)
rec.radio.amateur.space (satellites, meteor scatter, EME)
rec.radio.amateur.misc (any topic not covered in the above groups)

(At least two other English language radio hierarchies exist, prefixed
with "uk" (United Kingdom), and "aus" (Australia), in place of "rec.")

Again, cross-posting should rarely be necessary. Many times, a long-
running thread results from a single cross-posted article, and the
contents of such a thread drift further and further away from being
"on-topic" in the various NGs that receive each and every followup.

For more detailed information, see "Guide to the Rec.radio Newsgroups"
posted on the 15th of each month.

Jeffrey Herman (KH2PZ / KH6)
(rec.radio.amateur working-group)

I"m trying to decide which computerized logbook to buy.
I get confused with so many different ones.

Would each of you send me a one word message with the name of the logging program that you use.

I will compile the answers and post to the net. Then I will compare the top choices and ask for discussions.

Thx 73

1451. Need QSL help:VU4APR

Newsgroup: rec.radio.amateur.dx
Date: 1998-05-02 00:00:00 UTC
From: Greg Gobleman <k9zm@frontiernet.net>
Message-ID: <01bd75cf$869da3c0$35ab82d1@default>
Source record: 29372

I have tried for many years to get a card for VU4APR. Somehow I missed the stateside route that is now a silent key. I have qsl'ed via VU2APR {the operator} so many times I have lost track. I have sent via the JA route also. And the amateur society over in India. I can't get a response. No 'not in log' , nothing. I've done irc's, greenstamps, even their stamps on the return envelopes. I even sent to VU2PAI a package of used stamps and goodies if he would forward to VU2APR for me. He got the stamps and sent back a nice letter. Still no response. If anybody has any ideas, please pass them on.
Thanks es 73. K9ZM, ex KD9WK, N9CIW.

1454. Re: Request for accepted confirmations

Newsgroup: rec.radio.amateur.dx
Date: 1998-05-02 00:00:00 UTC
From: Claes Carneheim <sm0mpv@swipnet.se>
Message-ID: <354B610E.6F2214B6@swipnet.se>
Source record: 29375

I realized that my question was easy to misinterpret. I will rephrase it to
the following:;

I have written to ARRL two times, the first on March 15 this year, to ask if

it possible to have a list of submitted contacts that we have made, got QSL
card from and have been accepted as confirmed for DXCC-award, without any
response. I wrote to
dxcc@arrl.org.

Can You please guide me how to get the list of contacts that have been
accepted as confirmed for DXCC. The station I am asking for is the scout
club station SK0HS.

Best regards
Mel, SM0MPV

Steve, JOTA is the third whole weekend in October, thus 17-18. Hope to see
you then. We will then active from SK0HS Hï¿½sselby strans sea scout group.
We will also be active from Vï¿½ssar this summer. This is an island in the
Baltic (EU084) beloning to the scouts of Stockholm.

Thanks to everyone who has responded so far.
It seems that there is a difference between
"General logging" and "Contest logging" which
I was not aware of. So, if you are a contester
tell me so and indicate if you use different
software for that purpose.

The results are interesting so far!

Everyone please respond.

Thx again'

Well, I tell folks just to spend the few bucks and get LOG-eqf. It can be switched to contest type logging or back to just general logging. You can give the contest logs differant names, if your 'puter has a CD-rom drive it will even look up the specs on the call for you. And you can run the packet cluster window all at the same time. It does a bang up job of printing the QSL info lables on standard lable sheets too. Saves a lot of time, you just peel and stick after the contest is over that way. The author has put a lot of thought into that program. (no that isn't me, I don't write that kind of software) It runs in DOS, Windows and Win95 so it should take care of most of your needs.

Get a CW software that really works !!!

The Morse Decoder MRP37 is a "Just easy to use" Software using your PC +
Soundcard. Clear text is decoded and displayed on the screen.
Even under very weak audio conditions MRP37 performs excellent results!

See more informations and get a free demoversion at:
http://members.tripod.com/~PEeng/morse

Really good stuff!

1465. Packet Cluster problems

Newsgroup: rec.radio.amateur.dx
Date: 1998-05-03 00:00:00 UTC
From: Vic Rosenthal <rakefet@rakefet.com>
Message-ID: <354CB3A7.57E1E229@rakefet.com>
Source record: 29386

I've been having a problem with my local packet cluster...it will work perfectly for 5 to 45 minutes after I log on. Then, I'll stop receiving messages, and when I send something, find that I've been disconnected.

When I first encountered this problem, I was using only 5 watts and a groundplane to access it. Although the node is reasonably nearby, I figured I needed a bit more signal, so I switched to 30 watts and a 3-element beam. Nothing changed. The received signal is excellent here. I set all the TNC parameters according to the suggestions in the node's help files without any improvement. The TNC, by the way is a PK-12.

Does anyone have any suggestions on what to look for?

Closed Circuit Advisory

Newsline report number 1081 for release on Friday, May 1st, 1998 to follow.

<*>

The following is a QST

Another challenge to a ham band, a real life ham radio hero and more on Newslines financial crisis. These stores and more coming your way right now...

<*>

1.2 GHz threat

Ham radio could loose part of an important UHF band if the second civilian frequency for the global positioning system frequency is assigned an allocation at 1.2 GHz.

The Amateur Radio 23 cm band runs from 1240 to 1300 MHZ. A decision on whether the new, second frequency will be 1205 or 1250 MHZ is expected to be made in August. An allocation at 1250 MHZ could mean the end of hams in the band from 1240 to 1260 MHZ.

In February 1997, the Department of Transportation and the Department of Defense announced an agreement assuring civilian GPS users of a second frequency. This frequency is considered essential for critical civilian GPS uses.

According to a Department of Defense news release, the White House Commission on Aviation Safety and Security has called for the establishment of a second civil frequency as part of a broader program to maintain U.S. leadership in aviation and satellite technology. Unfortunately this leadership position could come at a high price for Amateur Radio.

(Via FCC, ARRL, W5YI)

<*>

ARRL request on bandplans gets RM instead of declatory ruling

The FCC has assigned a rulemaking number to the ARRL's request for an declaratory ruling. One that equates band plan compliance with good amateur practice.

Since the ARRL announced that it was going to seek such a ruling, there has been growing criticism of the its position among two groups. First are newer hams who use FM on two meters as their only mode. They say that the proposal is targeted directly at them because many are unwilling to abide by the so-called gentlemens agreement bandplans. These hams say there is no reason to follow a bandplan that they had no voice in creating and would not have voted to put in place. And, as previously reported, some go so far as to say that they believe no mode other than FM belongs on any ham band above 50 MHZ.
